As discussed in Section 2, *Project Description*, there is adequate existing parking to serve FORTAG and no new parking spaces or formal staging areas are proposed. Unimproved existing parking areas would serve the trail. The project would not require additional parking or intensify traffic from people accessing new parking areas. Fencing would be installed where necessary and as stated on page 2-20 of the Draft EIR, "amenity areas would include trash receptacles and dog waste bags." Therefore, there would be the opportunity for waste disposal along the trail reducing litter. In addition, Mitigation Measure Ag-4(c) would require regular removal of solid waste and litter on the trail.

Response LA 4.7

The commenter states that any work performed within the County ROW would require a County encroachment permit.

The comment is noted. Section 2.7 of the EIR lists the agencies, including the County of Monterey, that would grant permits and approvals for the project.

Re: CSUMB Comment Letter on the FORTAG Draft Environmental Impact Report

Dear Mr. Deal:

Thank you for the opportunity to comment on the Fort Ord Regional Trail & Greenway (FORTAG) Draft Environmental Impact Report (DEIR). As one of the Project's underlying jurisdictions, the California State University Monterey Bay (CSUMB) campus has a large stake in the success of this regional trail. The CSUMB student, staff, faculty and visitor community has the potential to benefit from the development of this trail. The greater Monterey Bay community will also have greater access to the CSUMB campus. The Project Objective #1 "Function as an active transportation artery for commuting and recreation, providing a safe, accessible, and separated alternative to motorized travel that reduces vehicle trips and associated emissions " directly support CSUMB's own Master Plan goals to create a bike and pedestrian prioritized campus connected to the surrounding community.

In regards to the DEIR, we submit the following comments. The previous CSUMB comments on the project summarized in the Introduction of this DEIR still stand as areas of focus for the campus; "[CSUMB] Requests that the EIR analyze and mitigate potential impacts specific to the campus, such as tree removal, stormwater, maintenance, lighting, safety at crossings, and CSUMB permit requirements, and asks TAMC to work with CSUMB and the Veterans Administration regarding trail alignment" These topics and others are addressed in the comments below.

1. Project Description

- a. **"The estimated number of Trail users would be between 1,000 and 3,000 daily, with the highest usage occurring on the CSUMB campus and near the Monterey Bay Recreational Trail (Coastal Rec Trail) (Powell 2019)" pg. ES-1**
 - i. This analysis estimates that the highest trail usage would occur on the CSUMB campus, but it does not designate any unique design elements, special routing or trail head locations to handle this high usage in contrast to other sections of the trail with the same design, but much lower usage. It would be helpful for this

review to identify the populations expected to make up the majority of this peak location ridership, and if the expected users are from the campus or not and how that difference might impact the trail design. This analysis should include some design considerations to address how, if at all, the trail section with the heaviest expected usage needs to be design uniquely to other sections.

b. "Jurisdictions" Table ES-1, pg. ES-2

- i. Please note that the CSUMB jurisdiction is the State of California, under the Trustees of the California State University.

LA
5.4

2. Biological Resources

a. Mitigation Measures BIO-1 (a-c) Tree & Plant removal

- i. CSUMB requests that any listed tree species removal follow the campus 2:1 tree replacement practice.
- ii. CSUMB requests that listed tree or plant species that cannot feasibly be avoided by trail re-routing should be mitigated and restored along the same section and property from which they were removed, i.e. habitat restoration and environmentally sensitive areas should not be relocated away from the areas of the original impact.

LA
5.5

LA
5.6

3. CSUMB North Loop

a. Crossing at 2nd Ave

- i. It is noted that an interim roundabout at 2nd Ave will precede the construction of an undercrossing, and remain in place thereafter. Will this roundabout be on campus property, and if so, will a portion of its maintenance be expected to be included in the Master Agreement maintenance section for the trail? The campus requests information regarding how these vehicular measures fall under the same VMT analysis exemption referred to in the DEIR for pedestrian and bicycle plans. If they do not, then the campus asks that additional analysis review these new vehicular measures. New vehicular roundabouts along the campus boundary may impact the campus traffic pattern.
- ii. The campus requests that the 2nd Ave undercrossing alignment and design coordinate with the campus regarding existing plans for the stormwater conveyance near this location. This should be included in the analysis on 'Potentially Jurisdictional Features' in the Biological Resources section.

LA
5.7

LA
5.8

LA
5.9

b. Alternate route north of campus between 3rd & 4th Ave

- i. What are the considerations to determine which alternative design is chosen? The route chosen may impact where and how the campus community accesses the trail.

LA
5.10

c. Roundabout at 8th St. and 5th Ave

- i. Will this roundabout be on campus property, and if so, will a portion of its maintenance be expected to be included in the Master Agreement maintenance section for the trail? The campus requests information regarding how these vehicular measures fall under the same VMT analysis exemption referred to in the DEIR for pedestrian and bicycle plans. If they do not, then the campus asks

LA
5.11

LA
5.12

that additional analysis review these new vehicular measures. New vehicular roundabouts along the campus boundary may impact the campus traffic pattern.

d. Retaining Wall near 8th St

- i. What is the anticipated maximum height of this retaining wall? Will this retaining wall be on campus property, and if so, will a portion of its maintenance be expected to be included in the Master Agreement maintenance section for the trail? The campus requests more information regarding the scale of potential retaining walls, route alternatives consideration to avoid tall retaining walls.

LA
5.13

4. CSUMB South Loop

a. Crossing at Butler Street near Eighth Ave

- i. The current alignment across Butler streets intersects with a high speed campus periphery road and an area frequented by heavy equipment at a facilities yard. The campus request further scrutiny and collaboration to determine the safest alignment for this section.

LA
5.14

b. Crossing the campus southern oak woodland

- i. The trail alignment parallel to Divarty St through the campus southern oak woodland would bring people into a seldom traveled part of campus that does not have significant build out. This section should respect its natural surroundings and identify an alignment and access/trailhead locations that best tie in the trail to the existing campus pathway infrastructure to avoid the campus needing to build into this natural open space to connect pathways to the trail.
- ii. The campus requests concerted effort be demonstrated to coordinate routing planning between the campus and the Veteran's Administration, which maintains property along the route of the CSUMB South Loop near the center of the campus.

LA
5.15

LA
5.16

c. Roundabout on 2nd Ave south of Divarty St.

- i. Will this roundabout be on campus property, and if so, will a portion of its maintenance be expected to be included in the Master Agreement maintenance section for the trail? The campus requests information regarding how these vehicular measures fall under the same VMT analysis exemption referred to in the DEIR for pedestrian and bicycle plans. If they do not, then the campus asks that additional analysis review these new vehicular measures. New vehicular roundabouts along the campus boundary may impact the campus traffic pattern.

LA
5.17

LA
5.18

5. Trail towards East Garrison

a. Access to/from East Campus Housing

- i. The campus requests that the trail section east of the main campus should identify where the primary access points / trailheads are located for the residents of the East Campus Housing area off of Abrams Rd and Schoonover Rd.

LA
5.19

6. Potential Construction Staging

a. Figure 2-18

- i. The seven potential construction staging areas identified on campus property shall be coordinated with campus staff to determine the day, time, and location,

LA
5.20

vehicle access routing and other general conditions as laid out by the campus. Campus staging areas should support construction of sections on CSUMB property, only. Staging for construction of off-campus trail sections would require further review and potential agreements by the campus. Alternate campus locations may be identified by the university.

7. Environmental Setting

a. **Global reference to “2017 CSUMB Comprehensive Master Plan (Draft)” should be retitled “CSUMB Draft 2020 Master Plan”**

LA
5.21

b. **Cumulative Projects List, Table 3-1**

- i. The current or future population of the CSUMB campus is not listed under the Cumulative Projects List table. The current campus population includes approximately 6,900 full time equivalent students (Fall 2019, CSUMB Institutional Assessment & Research). The Draft 2020 Master Plan targets a student population growth of the campus to 12,700 full time equivalent students over the next two decades, 60% of which are planned to be housed on campus. This population does not seem to be included in the calculations of this DEIR, and therefore in the analysis that follows. Please demonstrate how the campus population is incorporated into the cumulative impacts.

LA
5.22

8. Parking

a. **“It is the intention of the project to use existing parking areas for the Trail users.” (pg. 4.14-1) “CSUMB campus in the cities of Seaside and Marina” (pg. 4.14-1 & shown in fig. 2-17)**

LA
5.23

- i. This analysis identifies CSUMB as an existing parking location for the trail. Parking on campus is monitored and regulated according to California Vehicle and Education codes. This DEIR may not be required to provide a VMT analysis per the Governor’s Office of Planning and Research based on the nature of this project as a pedestrian and bicycle facility (pg. 4.14-11), however, any mention of CSUMB parking facilities as trail parking does not consider the impact of trip volume or parking capacity on campus facilities. The campus requests that TAMC collaborate with campus staff to determine where, if and how trail users who drive to a trailhead may park in accordance with the relevant parking regulations of the underlying jurisdiction.

Thank you again for the opportunity to provide input on the Project and DEIR analysis.

Sincerely,

Ray Pyle

Senior Director of Planning, Design & Construction
Facilities Management Department

Letter LA 5

COMMENTER: Ray Pyle, Senior Director of Planning, Design & Construction, California State University Monterey Bay (CSUMB)

DATE: January 3, 2020

Response LA 5.1

The commenter describes the potential benefits of the project to the CSUMB and Monterey Bay communities.

The comment is noted and herewith shared with TAMC decision makers for their consideration. No further response is required.

Response LA 5.2

The commenter introduces a set of comments on the Draft EIR, described in Comments LA 5.3 through LA 5.23, and notes that CSUMB previously requested that the EIR analyze and mitigate potential impacts specific to the CSUMB campus, and asked TAMC to work with CSUMB and the Veterans Administration regarding trail alignment.

TAMC will work with CSUMB and the Veterans Administration regarding the trail alignment as part of the MA being prepared for FORTAG. Determination of the final alignment will be a collective decision with each jurisdiction as funding becomes available. Please refer to Topical Response B for a discussion of the MA and Supplemental Agreements.

Response LA 5.3

The commenter states that the highest trail usage is expected at CSUMB but that there are no corresponding unique design elements to accommodate the heavy use. The commenter requests more information regarding peak location ridership.

Detailed ridership information has not yet been determined for each segment of the trail; however, it is estimated that there would be 1,000 to 3,000 daily trail users on the entire alignment.

Preliminary estimates for ridership through CSUMB are up to 1,000 daily trail users, however actual numbers will likely be closer to 400 to 500 trail users per day (Powell 2020). More detailed ridership information and design elements will be determined for each segment as funding becomes available for final design and construction. The trail is designed for high ridership throughout most of the trail length and ridership estimates are not so high that the trail would require any unique or specific design features.

Response LA 5.4

The commenter notes that the CSUMB jurisdiction is the State of California, under the Trustees of the California State University.

The list of jurisdictions in Table ES-1 of the EIR has been revised as follows to incorporate the information provided in the comment:

Del Rey Oaks, Marina, Monterey, Seaside, Monterey County, CSUMB (State of California, under the Trustees of the California State University), Coastal Commission

In addition, the list of agencies requiring permits and approvals for FORTAG in Section 2, *Project Description*, has been updated as follows:

- Transportation Agency for Monterey County
- County of Monterey
- City of Marina
- City of Seaside
- City of Monterey
- City of Del Rey Oaks
- CSUMB
- California Coastal Commission
- California Department of Fish and Wildlife
- California Regional Water Quality Control Board
- California Department of Transportation
- State of California, under the Trustees of the California State University
- U.S. Army Corps of Engineers
- U.S. Fish and Wildlife Service

Response LA 5.5

The commenter requests that listed tree species removal at CSUMB follow the campus 2:1 tree replacement practice.

The commenter does not state what list they are referring to (federal and state listed, or CRPR 1B-2B). However, as stated in the EIR Section 4.4.2, CSUMB's Master Plan (2017) Policy OS 1.6 requirement is "Plant two trees for every one tree that dies, is damaged, or is removed from the campus." The analysis under Impact BIO-5 in Section 4.4, *Biological Resources*, discusses the local tree ordinances that the project would be required to comply with, including CSUMB's Master Plan (discussed in section 4.4-2). Under CSUMB Master Plan Policy Goal OS 1.6 requires two replacement trees for every one tree that dies, is damaged, or is removed from the campus. The discussion of impacts under Impact BIO-5 has been revised for clarification as follows:

The northern trail segments (Northern Marina and Northern Loop segments) are located in the City of Marina; central portions of the trail (CSUMB Loop North, CSUMB South, and the National Monument Loop segments) are located on the CSUMB campus, in the City of Seaside, and within the former Fort Ord; and southern trail segments (Canyon Del Rey/SR 218 and Ryan Ranch segments) are located in the cities of Del Rey Oaks and Monterey. The General Plans, Municipal codes, and Master Plans of these governing agencies include goals, policies, and ordinances intended to protect, preserve and enhance natural habitats and biological resources to varying degrees. The Municipal Codes for the City of Monterey, City of Del Rel Oaks, City of Seaside, City of Marina, and Monterey County all require permitting for tree removal, and some provide additional protection for landmark or heritage trees. The City of Monterey has designated 15 landmark trees, none of which occur in the study area. Additionally, the City of Marina, City of Seaside, City of Monterey, City of Del Rel Oaks, Monterey County, and CSUMB include specific protections for oak woodlands. The CSUMB Master plan also requires replacement of trees at a 2:1 ratio.

Response LA 5.6

The commenter requests that listed tree or plant species that cannot feasibly be avoided by trail re-routing should be mitigated and restored along the same section and property from which they were removed.

In response to this comment, Mitigation Measure BIO-1(c) has been revised as follows:

(Note: if a federally and/or state listed plant species will be impacted, USFWS and/or CDFW will likely require a restoration plan to be submitted for their review in support of federal and/or state incidental take authorization[s]). Mitigation areas shall be located on the same property or as close as possible to the affected population.

Response LA 5.7

The commenter asks if the proposed 2nd Avenue roundabout within the CSUMB Loop North segment would be on campus property and if a portion of its maintenance would be designated to CSUMB in the MA.

The roundabout would be located in the City of Marina and maintenance would be the responsibility of the City of Marina. Maintenance details would be agreed upon in the SA related to that segment, once funding is found. Please refer to Topical Response B for information regarding the MA, SA's and trail maintenance.

Response LA 5.8

The commenter requests information regarding whether or not the proposed 2nd Avenue roundabout within the CSUMB Loop North segment falls under the VMT analysis exemption referred to in the EIR. The commenter requests additional analysis, if required, and states that new roundabouts along the campus boundary could impact the campus traffic pattern.

As stated on page 4.14-9 of the Draft EIR, "Pursuant to CEQA Guidelines Section 15064.3, transportation projects that reduce or have no impact on VMT can be assumed to cause a less than significant transportation impact." Roundabouts are intended to improve safety, movement operation, and urban design at intersections and do not generate new vehicle trips or VMT. As roadway infrastructure, roundabouts are not related to new land uses, places of occupancy, or attractions that result in trips. Roundabouts are generally retrofitted into intersection design in order to improve traffic flow and reduce unnecessary delay. Therefore, the proposed roundabout would not generate vehicle trips nor alter trip length or impact the campus traffic pattern.

Response LA 5.9

The commenter requests coordination with CSUMB regarding the CSUMB Loop North segment 2nd Avenue undercrossing alignment and design. The commenter states that the stormwater conveyance location near the undercrossing site should be listed as a Potentially Jurisdictional Feature in the EIR Biological Resources section.

TAMC will coordinate with CSUMB regarding the 2nd Avenue undercrossing alignment and design because the undercrossing is in CSUMB jurisdiction. As part of the MA prepared for FORTAG, implementing jurisdictions will work with TAMC to develop the trail, including the 2nd Avenue undercrossing, which will be the subject of a later SA.

The commenter does not state what stormwater conveyance they are referring to. The only stormwater features observed near the intersection of 2nd avenue and 8th street are City storm drains adjacent to the road, which are not potentially jurisdictional features. As stated in the EIR “any project segment or portion thereof that would disturb over one acre would be subject to the NPDES General Permit for Storm Water Discharges Associated with Construction and Land Disturbance Activities (Order No. 2012-0006-DWQ) adopted by the SWRCB.”

Response LA 5.10

The commenter asks what considerations will be given to determine which alternative is selected north of the CSUMB campus; the commenter states that this decision may impact where and how the CSUMB community accesses the trail.

Please refer to Response LA 5.2. Selection of the final alignment within the CSUMB campus will be made in cooperation between TAMC and CSUMB. TAMC will work with CSUMB to solve issues of concern for the trail alignment. Please refer to Topical Response B for a discussion of the MA and SA's.

Response LA 5.11

The commenter requests information about whether or not the proposed 8th Street and 5th Avenue roundabout would be on campus property and if a portion of its maintenance would be designated to CSUMB in the MA.

The proposed roundabout at the intersection of 8th Street and 5th Avenue is within City of Marina jurisdiction, and would not be constructed on CSUMB property.

Response LA 5.12

The commenter requests information about whether or not the proposed 8th Street and 5th Avenue roundabouts falls under the VMT analysis exemption referred to in the EIR. The commenter requests additional analysis, if required, and states that new roundabouts along the campus boundary could impact the campus traffic pattern.

Please refer to Response LA 5.8 for a discussion of VMT and traffic impacts from proposed roundabouts on the CSUMB segments.

Response LA 5.13

The commenter requests the anticipated maximum height of the proposed retaining wall near 8th Street. The commenter asks if the retaining wall would be on campus property, and if so, if a portion of its maintenance would be designated to CSUMB in the SA related to the design and construction of that segment, once funding is found. The commenter requests additional information regarding the scale of potential retaining walls and route alternatives consideration to avoid tall retaining walls.

The intent for the retaining wall near 8th Street is for a maximum height of three feet or lower. As described in Section 2.4.2 of the EIR under *Fencing and Retaining Walls*, the retaining wall would extend for approximately 160 feet in the CSUMB Loop North segment. The retaining wall would be located on both CSUMB and City of Marina property.

The project description does not include a design option to avoid adding a retaining wall in the CSUMB Loop North segment. The retaining wall would be needed to retain the existing slope, and

would not result in an adverse environmental impact. However, TAMC will work with jurisdictions to solve issues of concern for the trail alignment, including concern for the retaining wall on CSUMB property. Please refer to Topical Response B for a discussion of the MA, SA's and trail maintenance.

Response LA 5.14

The commenter requests further scrutiny and collaboration to determine the safest trail alignment across Butler Street near 8th Avenue.

Please refer to Response LA 5.2 for a discussion of how the final alignment will be determined in coordination with TAMC and local jurisdictions and documented in a SA for that segment, once funding is found.

Response LA 5.15

The commenter states that in the CSUMB southern oak woodland, the trail alignment should respect the natural surroundings and avoid building in the natural open space.

As discussed in Section 4.4, *Biological Resources*, the study area contains approximately 142 acres of coast live oak woodland observed along the Northern Loop, National Monument Loop, CSUMB Loop North, CSUMB Loop South, and Canyon Del Rey/218 segments. Approximately 0.76 acre of coast live oak woodland occur in the CSUMB Loop South segment. Impacts to oak woodlands for CSUMB are discussed under Impact BIO-5 on page 4.4-57 of the Draft EIR. Tree removal permits and compliance with associated requirements (e.g., tree replacement) would apply to oak woodlands in the study area. In addition, CSUMB Master Plan Policy for Goal OS 1.12 requires the protection of open space at the Southern Oak Woodlands and East Campus Open Space, but allows for minimally intrusive trail development, and Mitigation Measure BIO-2(a) would require implementation of sensitive natural community avoidance measures, including for oak woodlands. The proposed alignment is designed to connect FORTAG to campus pedestrian facilities without the need for trailheads or additional connecting trails. Therefore, FORTAG would protect the natural oak woodland surrounding at CSUMB.

Response LA 5.16

The commenter requests coordination with CSUMB and the Veteran's Administration for trail planning along the CSUMB Loops South segment.

TAMC will coordinate with applicable jurisdictions as part of the trail planning process once individual segments are ready for design and construction. As noted above under Response 5.2, TAMC would work with CSUMB and the Veteran's Administration to finalize the trail alignment. Please refer to Topical Response B for a discussion of the MA and SA's, which would include future coordination between TAMC and implementing jurisdictions.

Response LA 5.17

The commenter asks if the proposed 2nd Avenue roundabout south of Divarty Street would be on campus property and if a portion of its maintenance would be designated to CSUMB in the MA.

The proposed roundabout at 2nd Avenue and Divarty Street would be located on CSUMB property. Maintenance would be determined as part of the MA and associated Supplemental Agreements between CSUMB and TAMC. Please refer to Topical Response B for additional information on the MA.

Response LA 5.18

The commenter requests information about whether or not the proposed 2nd Avenue south of Divarty Street roundabout falls under the VMT analysis exemption referred to in the EIR. The commenter requests additional analysis, if required, and states that new roundabouts along the campus boundary could impact the campus traffic pattern.

Please refer to Response LA 5.8 for a discussion of VMT and traffic impacts from proposed roundabouts on the CSUMB segments.

Response LA 5.19

The commenter requests that the trail section east of the main campus should identify where the primary access points/trailheads are located for the residents of the East Campus Housing area off of Abrams Road and Schoonover Road.

As shown on Figure 2-9 in Section 2, *Project Description*, of the Draft EIR, the trail would be accessible east and west of the East Campus Housing area. A trail crossing is proposed at Inter-Garrison Road west of the housing area and a second Inter-Garrison Road trail crossing is proposed east of the housing area. The project does not include construction of new trailheads.

Response LA 5.20

The commenter requests coordination with CSUMB regarding construction staging on the CSUMB campus and states that staging areas within the campus should only support construction of trail sections within the campus. The commenter additionally notes that alternate staging areas on campus may be identified by the university.

Proposed construction staging areas are shown in Figure 2-18 on page 2-31 of the Draft EIR. Five staging areas are proposed to support construction of the two CSUMB segments. Please refer to Topical Response B for a discussion of the MA, SA's, and future coordination between TAMC and implementing jurisdictions. TAMC will coordinate with CSUMB on the any proposed staging area location, and work out details including timing constraints and vehicle access routing for all staging activities.

Response LA 5.21

The commenter requests that EIR references to the "2017 CSUMB Comprehensive Master Plan (Draft)" should be retitled "CSUMB Draft 2020 Master Plan."

Based on the comment and follow-up coordination with CSUMB staff, the reference to the aforementioned plan on page 3-5 of Section 3, *Environmental Setting*, of the EIR is revised as follows:

- ~~2017~~ California State University, Monterey Bay Public 2017 Draft Comprehensive Master Plan ~~(Draft)~~

The description of CSUMB planning documents on page 3-7 of Section 3, *Environmental Setting*, is also revised as follows:

~~2017 CSUMB Public 2017 Draft Comprehensive Master Plan (Draft)~~

~~The CSUMB Public 2017 Draft is in the process of updating its 2007 Master Plan, which endeavors to build on earlier planning efforts that facilitated the transition of the former Fort Ord Army Base to the campus at present day. The Public 2017 Draft Master Plan acknowledges the FORTAG project in relation to the campus, and specifies that “the plan also encourages a clear and inviting connection to the regional existing and proposed FORTAG trail network.”~~

The description of CSUMB planning documents on page 4.1-37 of Section 4.1, *Aesthetics*, is revised as follows:

Development projects proposed on the CSUMB campus are also required to comply with the goals and policies of the ~~CSUMB Public 2017 Draft Comprehensive~~ Master Plan, including architectural and landscape design themes (CSUMB 2017).

The description of CSUMB planning documents on page 4.4-31 of Section 4.4, *Biological Resources*, is also revised as follows:

- ~~Draft 2017~~ California State University Monterey Bay Public 2017 Draft Master Plan

The description of CSUMB planning documents on page 4.4-33 of Section 4.4, *Biological Resources*, is revised as follows:

Under CSUMB’s current Master Plan includes a development framework to maintain the natural habitats and habitat connections on campus. The ~~Draft Public 2017 Draft~~ Master Plan includes policies to protect and enhance the natural environment as well as preserve and protect native habitats and trees. This policy requires that development avoid or minimize impacts to native habitats, mature trees, special status species. The Policy for Goal OS 1.6 also requires two replacement trees for every one tree that dies, is damaged, or is removed from the campus. The Policy for Goal OS 1.12 requires the protection of open space at the Southern Oak Woodlands and East Campus Open Space, but allows for minimally intrusive trail development. The Policy for Goal OS 1.15 includes continued participation in development and implementation of the Fort Ord HCP as well as the Monterey County Oak Woodland Stewardship Guidelines. The Public 2017 Draft CSUMB m Master p Plan also incorporates FORTAG in the mobility section (Section 7).

The description of CSUMB planning documents on page 4.11-15 of Section 4.11, *Land Use and Planning*, is revised as follows:

Public 2017 Draft CSUMB Comprehensive Master Plan

CSUMB is in the process of updating its 2007 Master Plan, which endeavors to build on earlier planning efforts that facilitated the transition of the former Fort Ord Army Base to the campus at present day. The Public 2017 Draft Master Plan acknowledges the FORTAG project in relation to campus, and specifies that “the plan also encourages a clear and inviting connection to the regional existing and proposed FORTAG trail network” (CSUMB 2017). Furthermore, the Public 2017 Draft Master Plan states that the construction of the proposed CSUMB Loop South segment is one of the many elements that would contribute to the sense of arrival for the campus and would “emphasize the campus’s commitment to bicyclists and pedestrians” (CSUMB 2017). The CSUMB Loop North and CSUMB Loop South segments are clearly integrated

into the Public 2017 Draft Master Plan as an element that would fulfill the campus's need for connections to off-campus destinations while promoting alternative modes of transportation.

The description of CSUMB planning documents on page 4.13-8 of Section 4.13, *Public Safety and Services*, is revised as follows:

California State University Monterey Bay Public 2017 Draft Master Plan

The CSUMB Public 2017 Draft Master Plan was developed to guide the physical development of the campus and discusses the land use, open space, mobility, infrastructure systems, and other planning frameworks on campus (CSUMB 2017). Chapter 7, Mobility, of the Plan describes the system of infrastructure, amenities, and programs that allow for movement throughout the campus, with an emphasis on the desire for the prioritization of active transportation. Pedestrian travel is regarded as the primary mode of travel to campus.

Based on the above revisions, the following reference has been added to Section 7, *References*, of the EIR:

McCluney, Matthew S. 2020. Senior Campus Planner, California State University, Monterey Bay (CSUMB). Personal communication via email regarding references to the CSUMB Master Plan with Kelly Miller, Associate Environmental Planner, Rincon Consultants, January 27.

Response LA 5.22

The commenter states that the CSUMB campus population is not listed in the EIR Cumulative Projects List. The commenter states that CSUMB anticipates a student population growth from 6,900 to 12,700 full-time equivalent students over the next two decades. The commenter requests that the campus population be incorporated into the cumulative impacts analysis.

As stated on page 3-5 of the Draft EIR, "in addition to the list of cumulative projects, the projections approach is used for some issue areas where appropriate. For this method, the analysis considers buildout of...plans." The 2017 (2020) California State University, Monterey Bay Comprehensive Master Plan (*Draft*) is listed as a plan that was considered in the cumulative analysis for appropriate environmental issue areas. Therefore, the Draft EIR considered the projected increase in student population for CSUMB.

Response LA 5.23

The commenter states that the EIR mentions CSUMB as an existing parking location for the trail, but does not consider the impact of trip volume or parking capacity on campus facilities. The commenter requests collaboration with CSUMB to where, if, and how the trail users may park in accordance with regulations.

Final trail design details, including parking, will be determined as part of the MA and Supplemental Agreement between TAMC and CSUMB as discussed under Topical Response B. TAMC will coordinate with CSUMB on the existing parking location for the trail as part of the CSUMB North Loop and CSUMB South Loop segments.

Recently adopted updates to the State CEQA Guidelines state that automobile delay is not a significant environmental impact (Section 15064.3). Because the Draft EIR is intended to evaluate the environmental impacts of FORTAG and identify the impacts that would be significant, measurements of traffic delay, such as level of service effects, are not applicable and are not

evaluated in the Draft EIR. Instead, consistent with Section 15064.3 of the CEQA Guidelines, VMT was used to evaluate transportation impacts because VMT is now considered to be the most appropriate metric for determining transportation impacts.

As stated in Section 4.14, *Transportation*, of the Draft EIR, “It is assumed that vehicles carrying bicycles or walkers to FORTAG would generate an inconsequential VMT, as the system is mainly intended for local recreation and trips by active transportation users. Parking access to the facility would use existing parking areas, which would avoid the need for modifying roadways for vehicle turning movements or land for additional parking.” We have assumed that the CSUMB Loop North and CSUMB Loop South segments would be accessed primarily by students coming directly from their dormitories or residences and therefore these segments are unlikely to generate a high number of lengthy vehicle trips or trips that would require parking. It should be noted that use of the trail would not generate VMT because the trail since it would be open only to pedestrian, bicycle, and some equestrian use. Motor vehicle use of the trail would be prohibited. Therefore, because vehicle trips would generally be local and only used to arrive or depart from FORTAG, substantial VMT would not be generated. This finding is consistent with guidance from the Governor’s Office of Planning and Research for trail projects and resultant VMT impacts.

It is the intention of FORTAG to use existing parking areas for the trail users and as stated on page 4.14-9 of the Draft EIR, “parking access to the facility would use existing parking areas, which would avoid the need for modifying roadways for vehicle turning movements or land for additional parking.” Parking areas are shown in Figure 2-17 on page 2-27 of the Draft EIR. Potential parking areas include on-street parking and surface parking lots. Parking areas identified for trail users include the CSUMB campus in the cities of Seaside and Marina. The MA and applicable SA would include parking coordination with the applicable jurisdictions, agencies, organizations, or property owners including CSUMB, to ensure adherence with parking regulations.

RE: University of California Comments on Draft FORTAG EIR

Dear Mr. Deal:

This letter is sent in response to the Draft Environmental Impact Report (Draft EIR) related to the proposed Fort Ord Trail and Greenway (FORTAG) project. The University of California, Santa Cruz (University) owns several properties within the trail is proposed to traverse, including areas with the Fort Ord Natural Reserve (FONR). We have the following comments on relevant information provided in the Draft EIR. LA 6.1

1. Project Description (section 2.4.1): A segment of the proposed trail alignment will traverse a portion of the Fort Ord Natural Reserve (FONR), which is owned and managed by the University. The University requests that a description of the proposed Northern Loop alignment through the FONR be included in Section 2.4.1 of the Draft EIR.

2. Project Description (section 2.7): On pages 2-30, the University is not listed as a participating agency. The trail will require either an easement or right-of-entry, and maintenance agreement from the University in certain locations throughout its alignment. Therefore, the University should be listed as a responsible agency in Section 2.7 of the Draft EIR. LA 6.2

3. Section 4.4, Biological Resources (pages 4.4-53): The University supports Mitigation Measure Bio-2(b) – Develop and Implement a Biological Resources Mitigation and Management Plan (MMP) for Impacts to Biological Resources Resulting from Trail Construction and Operation to mitigate for the impacts of construction and operation of the trail within sensitive habitat areas, including those at the FONR. In addition to the interpretive signage and green fencing strategies listed in the mitigation measure, the University also requests that strategies such as fencing and no trespassing signage be included in the mitigation measure to protect sensitive habitats. The University looks forward to working with staff on the Biological Resources MMP for the trail segment that traverses the FONR. LA 6.3

Thank you for the opportunity to respond to the Draft EIR.

Sincerely,

Nicole Vamosi
 Interim Director
 Real Estate Services

Letter LA 6

COMMENTER: Nicole Varmosi, Interim Director of Real Estate Services, University of California Santa Cruz (UCSC)

DATE: January 3, 2020

Response LA 6.1

The commenter notes that UCSC owns several properties that would be traversed by the proposed trail. The commenter requests that a description of the proposed Northern Loop segment through the Fort Ord Natural Reserve be included in the project description.

A description of the Northern Loop segment including possible design options and roadway crossings is included on page 2-15 of the Draft EIR, which states, “The Northern Loop segment includes a design option to remain on the south side of Inter-Garrison Road up to 8th Avenue, rather than extending northwest toward Engineering Equipment Road. This design option is shown in **Figure 2-9.**”

Response LA 6.2

The commenter notes that UCSC is not listed as a participating agency of the project. The commenter states that the project would require either an easement or right-of-entry and a maintenance agreement from UCSC in certain locations. The commenter requests that UCSC be listed as a responsible agency in the project description.

UCSC has been added as a participating agency for the project because UCSC approval would be required for granting a trail easement or maintenance agreement with TAMC. Section 2.7, Required Permits and Approvals, has been updated as follows:

Additionally, permits and approvals would be required from the following agencies to implement the proposed project:

- Transportation Agency for Monterey County
- County of Monterey
- City of Marina
- City of Seaside
- City of Monterey
- City of Del Rey Oaks
- CSUMB
- California Coastal Commission
- California Department of Fish and Wildlife
- California Regional Water Quality Control Board
- California Department of Transportation
- State of California, under the Trustees of the California State University
- U.S. Army Corps of Engineers

Response LA 6.3

The commenter voices support for Mitigation Measure BIO-2(b), developing a Biological Resources Mitigation and Management Plan (MMP). The commenter requests that strategies such as fencing and no trespassing signage be included in the mitigation measure.

The comment is noted. Fencing and no trespassing signage has not been included in Mitigation Measure BIO-2(b) because the trail includes a four foot buffer area, two feet on each side of the trail, to provide additional space and reduce impacts to adjacent biological resources. In addition, the measure includes green fencing (dense vegetative buffers consisting of plant species) where appropriate to protect sensitive habitat. However, fencing and signage has been included in Mitigation Measure AG-4(b) to reduce impacts to agricultural fields within 50 feet of the trail.

Letter ORG 1

RE: FORT Friends Comments on Draft EIR for FORTAG Project

Dear Mr. Deal:

I am writing on behalf of the Fort Ord Recreation Trails Friends (FORT Friends) to express support for the Fort Ord Regional Trail and Greenway (FORTAG) Project. FORT Friends is a 501(c)(3) non-profit organization that is comprised of cyclists (road and mountain), trail runners, hikers, equestrians, naturalists and others. We work to preserve and expand public access to Fort Ord trails and support sustainable economic development that benefits local residents, businesses and the environment.

ORG 1.1

As described in our July 12, 2019 comment letter on the Notice of Preparation, the FORTAG is consistent with our organization's mission and goals as it will provide a new, safe connection for all types of recreationists in our community to trails on the Fort Ord National Monument and adjacent non-federal public open space without driving, and connects to the Monterey Bay Sanctuary Scenic Trail. The FORTAG will facilitate non-car commuting to work or errands (especially with the advent of e-bikes), and provide opportunities for people of all ages to use a safe, paved trail for exercise, resulting in a beneficial effect on the quality of life for residents in nearby communities.

ORG 1.2

We support project measures that maximize safety and comfort of all trail users and avoid potential conflicts among different types of users. Examples include unpaved buffer zones adjacent to the paved trail to for equestrian and mountain bike use, consistency with state policy on bicycle lanes, and consistent rules between jurisdictions (e.g., e-bike policy).

ORG 1.3

Thank you for your consideration of these comments.

Sincerely,
(original signed by)

Henrietta Stern, President
FORT Friends

CC: FORT Friends Board of Directors

Letter ORG 1

COMMENTER: Henrietta Stern, President, Fort Ord Recreation Trails Friends (FORT Friends)

DATE: January 3, 2020

Response ORG 1.1

The commenter expresses support for the project and describes the FORT Friends organization.

The comment is noted and herewith shared with TAMC decision makers for their consideration.

Response ORG 1.2

The commenter states that the project would provide a new, safe recreational and non-car commuting opportunities.

The comment is noted and herewith shared with TAMC decision makers for their consideration.

Response ORG 1.3

The commenter states that FORT Friends supports measures to maximize safety and comfort of all trail users, such as unpaved buffer zones adjacent to the paved trail.

The comment is noted and herewith shared with TAMC decision makers for their consideration. The trail would include design features to maximize safety and comfort for trail users including open space greenway buffer on both sides, where allowed, of up to 150 feet on both sides, or 300-foot-wide total and lighting in open space areas for safety reasons.

Letter ORG 2

RE: MORCA Comments on Draft EIR for FORTAG Project

Dear Mr. Deal:

I am writing on behalf of the Monterey Off-Road Cycling Association (MORCA) Board of Directors and membership to express support for the Fort Ord Regional Trail and Greenway (FORTAG) Project. MORCA is 501(c)(3) non-profit organization with a mission to advocate for mountain bicycling while giving back to local trails. To that end, MORCA has contributed thousands of hours of volunteer labor on the BLM-managed Fort Ord National Monument trails, and more recently performed trail work for the County of Monterey at Ford Ord and Toro Park.

ORG 2.1

As described in our July 15, 2019 comment letter on the Notice of Preparation, the FORTAG is consistent with our organization's mission and goals as it will provide a new, safe connection for mountain bikers (and road cyclists) in our community to access paved, gravel and single-track trails on the Fort Ord National Monument and adjacent non-federal public open space without driving. This project also has direct connections to the Monterey Bay Sanctuary Scenic Trail. This valuable transportation resource will facilitate bicycle commuting rather than using cars (especially with the advent of e-bikes), resulting in a healthier quality of life for residents in nearby communities.

ORG 2.2

We believe the project will have a beneficial effect on the mountain bike community, specifically with the inclusion of unpaved buffer zones adjacent to the paved trail and no removal of existing single-track trails used by mountain bikers and others.

Thank you for your consideration of these comments.

Sincerely,

Original Signed by Henrietta Stern

Henrietta Stern, Secretary
Monterey Off-Road Cycling Association

Letter ORG 3

FORTAG Draft EIR Comments

The Monterey Bay Chapter of the California Native Plant Society submitted scoping comments in July expressing our concerns about impacts to areas of high quality native plant communities likely to result from the FORTAG project. With regards to the Draft EIR for the FORTAG project we have the following concerns:

ORG
3.1

1) Special Status Plant Species

We requested consideration of CNPS List 4 (CRPR 4) as they are species of limited distribution or abundance and thus are a watch list that could qualify for future rare plant candidates. Not all should be dismissed outright. For example, *Piperia Michaelii* was observed and is ranked CRPR 4.2, meaning of limited distribution and fairly rare in California. CNPS has compiled an exhaustive plant list of Fort Ord plants and could assist with identifying List 4 plants that would meet the definition of uncommon and potential future candidates for listing as rare, so that they could be included in surveys prior to final project design.

ORG
3.2

2) Inadequate Plant Surveys

We feel the plant surveys are inadequate to document the affected project area. Surveys were conducted on 5 days in March and June, which missed the prime flowering period for many species. While the surveys likely are able to document the plant community types, they are not likely to reflect an accurate assessment of the range of plant species. We request that prior to final route design more complete biological surveys be done over the entire flowering season and continue annually until

ORG
3.3

the segment is built. Annual plants can be quite variable in numbers depending on the growing conditions.

3) Special Status Plant Species

The DEIR even admits that the plant survey did not meet the protocols for special status plant surveys. Thus Mitigation Bio-2(a) requires a survey prior to route construction. We request that this means adequate surveys carried out to meet requirements for all the special status plant species, with surveys conducted annually until construction activity occurs.

ORG
3.4

4) Wetland Determination

We would like to know why the wetland delineation and determinations in the Jurisdictional Waters and Wetlands Delineation Report were not conducted in the Frog Pond Wetland Preserve and the adjacent Natural Area Expansion. Without this information it is not possible to measure the impacts of the projects expansion of the trail in the Frog Pond. We also don't know if the proposed route in the Natural Area Expansion east of General Jim Moore Boulevard impacts wetland resources.

ORG
3.5

5) California Native Plant Society Reserves

The DEIR fails to mention that the proposed route passes through CNPS Plant Reserve 1 in the Del Rey Oaks/218 segment, which is located in the Natural Area Expansion east of General Jim Moore Boulevard. Likewise, the proposed route in the Fort Ord National Monument section goes along the edge of CNPS Plant Reserve 3, which is located northwest of the intersection of Eucalyptus and Parker Cutoff Roads.

ORG
3.6

As reserves set aside by the Army to protect areas of sensitive plant communities, these areas need to be avoided or have the route configured and managed to minimize impacts to the greatest extent possible.

(6) Non-native and Invasive Plant Proliferation

The project will have the great potential to introduce or spread non-native and invasive plants over a large region of native plant communities. Avoidance and successful mitigation measures will need to be carefully considered to reduce long term impact of non-native and invasive plant proliferation on high quality and sensitive native plant communities.

ORG
3.7

Mitigation BIO-2(c) needs to require that non-native invasive plants be removed prior to route construction to minimize as much as possible the spread of invasive plants. Any plantings shall also be required to be from locally collected seeds.

7) Baseline Study of Native Plant Communities

The EIR and analysis needs a good baseline study of the native plant communities to identify disturbed areas that would be more appropriate for the route and reduce the impact on building the trail in more pristine habitats.

ORG
3.8

A pre-survey for the existence of non-native and invasive plants is needed to establish baseline conditions for any mitigation program. Mitigation should be prioritized to identify non-native plants and any invasively-acting plants introduced during trail construction.

ORG
3.9

A dedicated funding source and monitoring program to protect high quality native habitats from the degradation of invasive non-native plants must be established in perpetuity.

ORG
3.10

Who will be responsible for funding and carrying out invasive weed mitigations? If it is up to the jurisdiction that owns the land, then it is imperative that agreements be reached prior to construction to ensure adequate funding and resources will be available to control invasive plants.

ORG
3.11

Weed monitoring must be especially prioritized for sensitive plant communities.

8) Trail Maintenance

MB-CNPS is very concerned about the long term impacts of trail side vegetation clearance activities. Many parks with active trail maintenance have encountered severe problems with invasive and non-native plants proliferating along the trails. These are then vectored into the surrounding wild lands. We are concerned about the proposed 2-foot shoulders along the paths and the real possibility that these will become weed zones that introduce weeds into previously pristine habitats.

ORG
3.12

Methods to minimize disturbance on the edges of the trails must be incorporated in the Best Management Practices for trailside maintenance. Native plants must be allowed to compete at the trail edge and blanket clear cutting must be discouraged to prevent weedy zones from proliferating.

9) Mitigation for Loss of Sensitive Plant Communities

ORG
3.13

CNPS is concerned that the DEIR does not demonstrate where available equivalent habitat such as the chaparral type communities would be available to preserve at a 1:1 acreage. The DEIR should demonstrate where and how much acreage of sensitive plant communities is available for mitigation.

10) Oak Woodlands

ORG
3.14

It is unclear whether oak woodlands are considered to be a sensitive plant community or not, with some reference to areas near Marina being sensitive. We feel that for at least small oak woodlands, the route corridor can significantly impact the biological resources, and mitigation of impacted acres should be made with 1:1 acreage preservation if the route can not be modified to reduce the impacts.

11) CNPS Plant Reserve #1 Route

ORG
3.15

Regarding the proposed route in CNPS Plant Reserve 1, on December 2015, the Board of Directors of the Monterey Bay Chapter of the California Native Plant Society adopted the following language regarding the proposed FORTAG trail through CNPS Plant Reserve #1:

MOTION - Monterey Bay CNPS supports the general concept of a trail through Plant Reserve 1. The Chapter would need to prevent negative impacts on the maritime chaparral, the rare plants and the riparian corridor by working closely on the choice of the route location, approving the trail design and maintenance practices, and creating a trail/habitat corridor to connect with the future BLM portion of Fort Ord National Monument.

We need to be consulted about what the best solution to the routing of FORTAG at Reserve #1 is, with input from the Monterey Regional Park District included. We would strongly oppose construction of the route in the event that the continuing route across South Boundary Road to the Fort Ord Monument segment fails to be approved and constructed.

Reserve #1 has conserved a unique assemblage of uncommon manzanita species since the reserves designation by the U.S. Army in the 1970s. Potential impacts a trail would involve such as removal of sensitive maritime chaparral, damage to riparian areas, removal of oaks and introduction of weeds must be considered by the DEIR. The proposed route is very close to or is impacting a riparian corridor, a sensitive plant community. The route would also traverse dense coastal live oak woodland with the need to remove some oaks, especially if a wide path is used. Since the Reserve is also

ORG
3.16

in the Natural Area Expansion we insist, to respect the sensitive resources, it be 6 to 8 feet wide, with no shoulders and blend into the environment (not black pavement).

We suggest the following alternatives to the proposed route through Plant Reserve #1 considered in the DEIR. We would suggest minimizing impacts by routing around the reserve by immediately climbing northward after crossing the underpass to the South Boundary Road corridor and then eastward along South Boundary Road. This route should be examined for its potential impacts, which would mainly be on oak woodlands. Alternatively it may be possible to use existing fire breaks on the southern ridge to route the trail up to South Boundary Road. But we are not sure now which possible route would have the least impacts and would encourage a dialogue to consider all the options available. We are also concerned that putting a route through the reserve will lead to proliferation of user trails and resulting degradation of the reserve, and we therefore require that management of the trail focus especially on minimizing the impacts to the reserve.

ORG
3.17

12) Frog Pond Wetland Preserve Route

We have similar concerns about the path through the Frog Pond Wetland Preserve where a current 4-foot wide path is proposed to be 8 feet wide. This path is entirely within a riparian woodland zone and in or immediately adjacent to a likely wetland of Del Rey Oaks Creek (note this was not studied in the DEIR). We also have concerns about the increased usage of bicycles that will detract from the current quiet peaceful nature of hiking in the Frog Pond. Bikes speeding by are not compatible with quiet and meditative nature appreciation and are a significant impact. Due to the sensitive wetland/riprarian issues, we request that an alternative that bypasses the preserve by utilizing a boardwalk along Hwy 218 be considered for the EIR. Under CEQA, alternative trail alignments must be considered and evaluated if there are potential impacts to sensitive resources. The Least Environmentally Damaging Alternative must be adopted, unless there are over-riding considerations that provide substantial evidence that there are no good alternatives. Mitigations are supposed to offset unavoidable damages.

ORG
3.18

ORG
3.19

13) Alternative 4

Alternative 4 may remove most of the riprarian/wetland impacts, but will still convert a limited use nature preserve into a heavily used bicycle path. The DEIR clearly states it would use the existing northern trail loop, but even if a separate 8 foot path were constructed above, it would have a huge impact on the preserve. Such a separate path would impact some scenic oak trees and be hard to construct on the sloped terrain without significant and visually inappropriate retaining cuts. If bikes absolutely

ORG
3.20

have to be allowed in the Frog Pond, the only possible way is to require riders to walk their bikes through the preserve.

14) Additional Mitigations for Project Corridor Development

ORG
3.21

In addition to 1:1 preservation of adjacent equal quality habitat, the DEIR should consider restoration and removal of invasive weeds from adjacent lands, parks, and habitat preservation areas. An example of this would be removal of the English Ivy and Cape Ivy from the Frog Pond Wetland Preserve.

Sincerely,

A handwritten signature in blue ink that reads "Donna Burych".

Donna Burych, Conservation Chair, Monterey Bay Chapter CNPS

Dedicated to the preservation of California native flora

Letter ORG 3

COMMENTER: Donna Burych, Conservation Chair, California Native Plant Society (MB-CNPS)
Monterey Bay Chapter

DATE: January 3, 2020

Response ORG 3.1

The commenter notes that MB-CNPS previously submitted scoping comments on the project and is now submitting comments on the EIR.

The comment letter dated July 15, 2019 from MB-CNPS is included in Appendix A of the Draft EIR and comments were addressed in Section 4.4, *Biological Resources*, as show in Table 1-1 on page 1-7 of the Draft EIR.

Response ORG 3.2

The commenter requests consideration of CNPS List 4 plant species.

CRPR List 3 and 4 species are not typically included in a CEQA analysis. Plants with a CRPR of 3 include those that have not been studied, and data about taxonomy and population status is lacking. Plants with a CRPR of 4 include those with a limited distribution or infrequent throughout a broader area in California. In both cases, loss of individuals at one location would not jeopardize local or regional populations, and thus would not rise to the level of a significant impact under CEQA. The impacts to plants from a narrow linear project are even further reduced as the total number of individuals effected at any one location would be limited by the narrow extent of construction disturbance. However, botanical surveys that are required under Mitigation Measures BIO-1(a) would be floristic in nature, such that any CRPR list 3 and 4 species would be identified during those surveys.

Response ORG 3.3

The commenter voices the opinion that plant surveys performed for the project were inadequate because they did not occur during the prime flowering period for many species. The commenter requests annual plant surveys.

Rare plant surveys were performed for trail segments anticipated to be developed first. Specifically, surveys have already been completed along the Canyon Del Rey/SR 218 and CSUMB Loop North and South segments. These surveys were seasonally timed during the blooming period of the target species with potential to occur in this area (surveys occurred in March, May, and June 2019). Perennial shrubby species and trees, such as manzanita, golden bush, and Monterey pine were identifiable during surveys, and later blooming species were observed past bloom during the final survey, making further surveys unnecessary. The special status species identified during these surveys are included in the BRA (Figure 5, Appendix A).

As noted in Section 2, *Project Description*, construction of FORTAG would occur in segments over time, depending upon funding availability and participation of the underlying jurisdictions. Because some segments may not be constructed for many years, subsequent surveys for the remainder of the FORTAG alignment would be performed prior to implementation of that segment. Refer to Response SA 1.10.

Response ORG 3.4

The commenter states that the EIR admits that the rare plant survey did not meet protocols for special status plant surveys, and because of this, Mitigation Measure BIO-2(a) requires a survey prior to route construction. The commenter requests that adequate surveys are conducted annually until construction occurs.

Refer to Response ORG 3.3 above. As noted therein, due to long-term and phased buildout of the FORTAG segments, protocol surveys for every segment would not be appropriate at this time. Mitigation Measure BIO-1(a) [not Mitigation Measure BIO-2(a)] describes the focused protocol surveys already completed for the Canyon Del Rey/SR 218 segment, the CSUMB Loop South segment and the CSUMB Loop North segment in the 2019 blooming period. These surveys have already been completed because it is anticipated that these segments are most likely to be constructed first. As further indicated in the measure, completed rare plant surveys need not be repeated if construction of a segment occurs within three years of the survey's completion. Ongoing surveys for segments that may not be constructed for many years is infeasible and unnecessary.

Mitigation Measure BIO-2(a) addresses avoidance measures for sensitive natural communities, which require segment-specific mapping of sensitive natural communities within trail segments prior to final design and construction.

Response ORG 3.5

The commenter asks why the Jurisdictional Waters and Wetlands Delineation Report did not include the Frog Pond Wetland Preserve and the adjacent Natural Area Expansion. The commenter states that it is unclear if the trail would impact wetland resources in the Natural Area Expansion east of General Jim Moore Boulevard.

Impacts to State and Federally protected wetlands, including through the Frog Pond Wetland Preserve, are discussed under Impact BIO-3 in Section 4.4, *Biological Resources*. As noted therein, at the Frog Pond Wetland Preserve, the proposed trail width would be limited to eight feet, and a stable, permeable surface would be used in lieu of pavement to minimize impacts. This would reduce potential impacts within the Frog Pond Wetland preserve; however, impacts would not be entirely avoided. Mitigation Measures BIO-3(a) and BIO-3(b) are therefore required to ensure no net loss of wetlands and a less than significant impact under CEQA.

There would be some impacts to the tributary that feeds the Frog Pond east of General Jim Moore Boulevard on the Natural Area Expansion parcel. These impacts would largely come from the creation of an undercrossing where the tributary is currently diverted into a culvert under the road. This would generate positive impacts of restoring the culverted segment to a natural streambed. Within the Natural Area Expansion Parcel, there would be minimal impacts to the ephemeral drainage from development of the trail since it would likely require adding a bridge; however, Mitigation Measures BIO-3(a), BIO-3(b), and BIO-3(c) would ensure no net loss of wetlands and a less than significant impact under CEQA.

A wetland delineation was not completed for areas of the trail within the Frog Pond Wetland Preserve or the Natural Area Expansion, because this segment of the trail is not expected to be constructed in the near future. A wetland delineation was completed for a portion of the Canyon del Rey/SR 218 segment that has received federal funding through the Active Transportation Program (ATP), and is thus the first segment of FORTAG anticipated for construction. Additional segment-specific wetland delineations would be prepared for individual segments with potential to impact wetlands, as those segments become funded and further designed. This includes areas within the

Frog Pond Wetland Preserve, the Natural Expansion Area, and Laguna Grande, pursuant to Mitigation Measure BIO-3(a).

Response ORG 3.6

The commenter states that the EIR does not mention that the trail would run through two CNPS Plant Reserves (1 and 3) and that impacts to these reserves must be avoided or minimized.

Impacts to sensitive plant communities within the plant reserves would be limited to riparian woodlands at plant reserve 1 and chamise chaparral (if the specific vegetation alliances are considered sensitive at the time of construction) at plant reserve 3. Mitigation Measure BIO-2(a) through BIO-2(d) would reduce these impacts to less than significant under CEQA.

To directly acknowledge these reserves, the analysis under Impact BIO-6 in Section 4.4, *Biological Resources*, has been revised as follows:

The parcel designated as a habitat corridor occurs in the study area on the south side of Inter-Garrison Road west of the Jerry Smith Trail. The Northern Loop segment runs across the northern end of this parcel, approximately parallel with Inter-Garrison Road. Under the HMP some development will be allowed on this parcel for recreational use, including trails. Development of FORTAG would also comply with the requirement of the 2007 Biological Opinion (USFWS). Therefore, no conflicts are expected.

The Canyon del Rey/SR 218 segment also crosses CNPS reserve #1 (the MPRPD's Natural Area Expansion east of the Frog Pond), and the National Monument Loop segment crosses or is adjacent to an area identified as CNPS reserve #3 (west of the intersection of Eucalyptus Road and Parker Flats Cut Off Road). The HMP identifies the MPRPD's Natural Area Expansion parcel as an opportunity for biological research and interpretive trails. The resource conservation requirements for the CNPS reserve #1 state that MPRPD will preserve the natural habitat within the parcel in perpetuity, which includes limiting development to internal circulation (trails) and modest interpretive displays. The HMP also requires that members of CNPS be allowed access to the parcel for research and other purposes, and that the parcel will be managed appropriately for plant species of special concern, habitat restoration and enhancement practices will be implemented, and wetland depended species will be monitored. There are no management restrictions under the HMP for development within parcels west of the intersection of Eucalyptus Road and Parker Flats Cut Off Road, although parcel L23.2 is identified in several parcel maps as "plant reserve 3".

Response ORG 3.7

The commenter states that the project could introduce or spread non-native and invasive plants in native plant communities. The commenter states that Mitigation Measure BIO-2(c) should require removal of non-native invasive plants prior to trail construction as well as local sourcing of seeds used for plantings.

Please refer to Mitigation Measure BIO-2(d), which requires implementation of an Invasive Weed Prevention and Management Program. This measure states "For activity that would occur within or adjacent to sensitive habitats, prior to start of construction an Invasive Weed Prevention and Management Program shall be developed by a qualified biologist to prevent invasion of native habitat by non-native plant species. A list of target species shall be included, along with measures for early detection and eradication. All disturbed areas shall be hydroseeded with a mix of locally native species upon completion of work in those areas." Because the commenter-requested

requirements are already required in Mitigation Measure BIO-2(d), no revisions have been made to Mitigation Measure BIO-2(c) as a result of this comment.

Response ORG 3.8

The commenter states that a study of native plant communities is needed to establish baseline conditions and identify disturbed areas to route the trail through to reduce impacts to pristine habitats.

Refer to Response ORG 3.5. A BRA was prepared to identify and map vegetation communities and biological resources along the entire trail alignment and larger study area to inform trail design and minimize impacts to biological resources. This BRA describes the existing setting, and thus provides the baseline conditions evaluated in the EIR. Protocol-level surveys are not required to establish baseline conditions.

Additionally, the trail alignment was designed to avoid areas identified as reserves under the Fort Ord Base Reuse Plan. Parcels along the National Monument Loop segment and CSUMB segments are designated for development, the construction of a trail in this area would avoid greater impacts and fragmentation of more sensitive habitats on the Fort Ord National Monument. Furthermore, the current FORTAG trail has been designed to maximize the use of existing trails, roads and disturbed areas and on lands designated for future development, and to minimize the amount of development within undisturbed natural habitat, while still achieving the goal of a continuous loop trail.

Response ORG 3.9

The commenter states that mitigation should identify non-native plants and invasively-acting plants introduced during trail construction.

As noted under Response ORG 3.7, Mitigation Measure BIO-2(d) requires the development of an Invasive Weed Prevention and Management Program to manage invasive species during construction and operation of the trail.

Response ORG 3.10

The commenter states that a funding source and monitoring program to protect habitats from invasive non-native plants must be established in perpetuity.

As stated on page 2-1 of the Draft EIR, “The development, construction, operation, and maintenance of FORTAG would be managed under a Master Agreement (MA), to be executed by TAMC and the jurisdictions within whose boundaries FORTAG is located.” The MA prepared for the development and operation of FORTAG would establish the specific enforceable mitigation measures, such as Mitigation Measures BIO-2(d) to develop an Invasive Weed Prevention and Management Program, as well as any applicable rules for each jurisdiction, as agreed upon in conjunction with TAMC through a series of Supplemental Agreements to the MA as each segment is constructed. Please refer to Topical Response B for a discussion of the MA.

Response ORG 3.11

The commenter asks who would be responsible for funding and carrying out invasive weed mitigation. The commenter states that it is important that agreements be reached prior to construction to ensure adequate funding and resources for weed mitigation and monitoring.

Each underlying jurisdiction would enter into the MA and a SA for a given segment, which would identify maintenance responsibilities, trail use rules, and other considerations that require coordination between the various agencies and groups involved in FORTAG's development and management. Please refer to Topical Response B and Response ORG 3.10 for additional information on the MA and its relation to invasive weed mitigation.

Response ORG 3.12

The commenter expresses concern about long-term impacts of trail side vegetation clearance activities. The commenter states that the trail shoulders could become weed zones that cause the spread of invasive species into pristine habitats. The commenter provides recommendations for minimizing trail-edge disturbance.

Each underlying jurisdiction would enter into the MA, and then a SA for a segment for which funding has been found, which would identify maintenance responsibilities, trail use rules, and other considerations that require coordination between the various agencies and groups involved in FORTAG's development and management. Please refer to Topical Response B and Response ORG 3.10 for additional information on the MA and SA. To address specific impacts related to trail side vegetation, Mitigation Measure BIO-2(d) has been revised as follows:

If exotic species invade these areas prior to hydroseeding, weed removal shall occur in consultation with a qualified biologist and in accordance with the restoration plan. The plan shall include Best Management Practices (BMPs) for trail side Maintenance to avoid the spread of non-native species. Landscape species shall not include noxious, invasive, and/or non-native plant species that are recognized on the Federal Noxious Weed List, California Noxious Weeds List, and/or California Invasive Plant Council Lists 1, 2, and 4.

Response ORG 3.13

The commenter states that the EIR does not demonstrate where available equivalent habitat would be available to preserve habitat at a 1:1 ratio.

Advance identification of mitigation lands is not required for CEQA environmental review, and specific parcels that could function as potential mitigation lands should never be publicly identified prior to completing land purchase negotiations to protect confidentiality. However, several parcels on the former Fort Ord and within the Seaside and Marina area have been identified as potentially suitable for mitigation. The available mitigation areas within the region are far in excess of what would be required for the relatively small acreage of impacts anticipated from FORTAG development.

Response ORG 3.14

The commenter states that it is unclear whether oak woodlands are considered to be a sensitive plant community or not. The commenter states that impacts to oak woodlands should be mitigated with 1:1 acreage preservation if the route cannot be modified to reduce impacts.

Coast live oak woodlands (*Quercus agrifolia* Woodland Alliance) are not considered sensitive under the current California Sensitive Natural Communities List (CDFW 2019); however, the *Quercus agrifolia*/*Adenostoma fasciculatum* – (*Salvia mellifera*) Alliance is considered sensitive, with a CRPR of G3 S3. This alliance closely resembles the Holland classification for maritime chaparral, which is considered a "legacy" sensitive natural community in CNDDDB and should still be addressed under CEQA. The coast live oak woodlands in Marina are not considered sensitive by CDFW, but where

they fall within the coastal zone at Laguna Grande, they are likely to be considered environmentally sensitive habitat areas (ESHAs) by the California Coastal Commission. The final alignment within oak woodlands would be designed to minimize impacts to the maximum extent possible. Specifically, Mitigation Measures BIO-2(a) through 2(c) would require avoidance measures to limit the disturbance from construction, develop a Mitigation and Management Plan for trail construction and operation, and avoid invasive weeds. These measures would limit disturbance in oak woodlands.

Response ORG 3.15

The commenter describes the MB-CNPS stance on routing a trail through the CNPS Plant Reserve #1: MB-CNPS supports running a trail through the reserve, but needs to be consulted regarding how to do so; CNPS would oppose the route in the event that the continuing route across South Boundary Road to the Fort Ord Monument fails to be approved and constructed.

Consistent with the motion passed by MB-CNPS in December 2015, the FORTAG alignment through CNPS Plant Reserve #1 would result in less than significant impacts to maritime chaparral, the riparian corridor, and sensitive plant species with implementation of Mitigation Measures BIO-1(a) to conduct special status plant species surveys, BIO-1(b) to implement special status plant species avoidance, minimization and mitigation, BIO-2(a) 2(b) and 2(c) to avoid and minimize impacts to sensitive communities, and BIO-3(a), 3(b) and 3(c) to avoid and minimize impacts to wetlands and waters, including the riparian corridor. When finalizing trail design through CNPS Plant Reserve #1, TAMC will consult with both MB-CNPS and the MPRPD. The commenter's opposition to the project if the trail route across South Boundary Road to the Fort Ord Monument is not approved is noted and herewith shared with decision makers for consideration.

Response ORG 3.16

The commenter describes the biological resources and potential trail impacts at CNPS Plant Reserve #1. The commenter states that CNPS insists that within the CNPS Plant Reserve #1, the trail be six-to eight-feet wide with no shoulders or black pavement.

CNPS Plant Reserve #1 is located on the east side of General Jim Moore Boulevard, within the Natural Area Expansion parcel east of the Frog Pond Wetland Preserve. In this area, the trail would be a 12-foot-wide paved path, with a two-foot-wide unpaved shoulder on both sides, for a total width of 16 feet. The trail would be paved with asphalt. The commenter's preference for a narrower, non-black trail in this area is noted and herewith shared with TAMC decision makers for consideration.

The EIR considered impacts to maritime chaparral, riparian corridors, and the introduction of weeds. As mapped in the EIR, the proposed alignment within CNPS Plant Reserve #1 is within coast live oak woodland, which would avoid impacts to maritime chaparral. Mitigation Measures BIO-3(a), 3(b) and 3(c) would avoid and minimize impacts to wetlands and waters, including the riparian corridor. Additionally, Mitigation Measure BIO-2(d) would require an Invasive Weed Prevention and Management Program, reducing the potential for impacts due to invasive weeds within CNPS Plant Reserve #1.

Response ORG 3.17

The commenter recommends routing the trail around the reserve by climbing northward after crossing the underpass to the South Boundary Road corridor and then eastward along South

Boundary Road; or, to route the trail up to South Boundary Road using existing fire breaks. The commenter encourages dialogue regarding this issue and states that CNPS requires minimizing impacts to the CNPS Plant Reserve #1. However, the commenter states their concern about user trails and that management of the trails should focus on minimizing impacts to special status plant species.

The Canyon Del Rey/SR 218 segment would meander southward toward South Boundary Road and through CNPS Plan Reserve #1. While FORTAG would route through the reserve, Mitigation Measures BIO-1(a) through BIO-1(c) would reduce impacts to sensitive plant species. In addition, the trail would have an open space greenway on both sides through the reserve where trails would be avoided. Alternative 2, as discussed on page 6-16 of the Draft EIR, is proposed as an alternative alignment and would involve no crossing at South Boundary Road and avoid CNPS Plant Reserve #1 by rerouting the trail northwest. There would be no trail extending northeast to connect to the proposed Ryan Ranch segment. The revised alignment for Alternative 2 is shown on Figure 6-1 on page 6-15 of the Draft EIR. The commenter's suggested alternative trail route has not been considered as a project alternative because there are mitigation measures available to reduce impacts to sensitive plant communities in the reserve and Alternative 2 would avoid the CNPS Plant Reserve #1.

Response ORG 3.18

The commenter describes concerns about adding a bike trail to the Frog Pond. The commenter recommends consideration of an alternative that would bypass the preserve by utilizing a boardwalk along SR 218.

The commenter's concerns regarding the Frog Pond are noted. Please refer to Topical Response A for a discussion of impacts to the Frog Pond Wetland Preserve. As described therein, impacts to biological resources at the Frog Pond would be less than significant or less than significant with mitigation. Bicycle speeds would be relatively low through the Frog Pond because of the reduced trail width, which would reduce the likelihood of bicycle strikes on wildlife. In addition, most wildlife movement occurs late night to early morning and amphibians move more frequently during wet weather. Bicycle traffic would be at its lowest during these times of peak wildlife movement, further minimizing the potential for bicycle impacts on wildlife. Impacts related to human enjoyment of the Frog Pond, when pertinent to the project's environmental analysis, would be less than significant. As discussed in Topical Response A, consideration of a peaceful sense of place is not a factor included in Appendix G of the *CEQA Guidelines*.

The commenter states that Del Rey Oaks Creek was not studied in the EIR. The EIR includes Canyon Del Rey Creek (another name for Del Rey Oaks Creek), and depicts the creek flowing along the south side of the Frog Pond Wetland Preserved on the north side of SR 218. Impacts to this feature were considered in the EIR.

Regarding the commenter's suggestion to consider a new alternative that would utilize a boardwalk along SR 218, please refer to Response LA 2.3. As noted therein, a new alternative – Alternative 5, South of Frog Pond Caltrans Right-of-Way Alignment – has been added to the EIR in response to several comments suggesting such an alternative. Alternative 5 would route the trail south around, rather than through, the Frog Pond, utilizing a boardwalk over the drainage ditch (Canyon Del Rey Creek) that runs parallel to SR 218. Refer to Section 6.3.5, Alternative 5: South of Frog Pond Caltrans Right-of-Way Alignment in Section 6, *Alternatives*, for the full description and analysis of this new alternative

Response ORG 3.19

The commenter states that the Least Environmentally Damaging Alternative must be adopted unless there are over-riding considerations that provide substantial evidence that there are no good alternatives. The commenter states that mitigation should offset unavoidable damages.

Per CEQA Guidelines Section 15126.6(e)(2), an EIR must identify an environmentally superior alternative. However, there is no requirement for the Lead Agency to adopt the environmentally superior alternative. Per CEQA Guidelines Section 15043, a public agency may approve a project despite potentially significant environmental impacts if the agency makes an informed and publicly disclosed decision that (1) there is no feasible way to lessen or avoid the effect(s); and (2) specifically identified expected benefits from the project outweigh the policy of reducing or avoiding significant impacts of the project. For the proposed project, all environmental impacts analyzed in the EIR were found to be less than significant or less than significant with mitigation. As such no statement of overriding considerations are required.

Response ORG 3.20

The commenter states that Alternative 4 would minimize most riparian/wetland impacts but would still convert a limited use nature preserve into a bike path. The commenter states that the only way to allow bikes in the Frog Pond is to require riders to walk their bikes.

The commenter is correct that impacts to jurisdictional features under Alternative 4 would be less than those identified for the proposed project because there are fewer wetlands in the northern portion of the Frog Pond Wetland Preserve. However, impacts to jurisdictional features would not be avoided, and Alternative 4 would require the same mitigation measures that are included in Section 4.4, *Biological Resources*, for the proposed project to ensure no net loss of wetlands.

In addition to Alternative 4 there are three other alternatives that would reduce biological impacts in the Frog Pond Wetland Preserve and reroute bicycle use. Alternative 1, the No Project Alternative, would completely avoid impacts to the Frog Pond since the trail would not be constructed. Alternative 2, Increased Use of Roadways, would modify the alignment to reduce impacts to natural resources, primarily sensitive habitat, by increasing the use of existing roadways. Alternative 2 would eliminate the Canyon Del Rey/SR 218 segment and replace the segment with an alignment that would follow the PG&E easement on Plumas Avenue in the City of Seaside from Fremont Boulevard on the west to General Jim Moore Boulevard on the east. Alternative 2 would thus avoid all impacts to the Frog Pond but would move the alignment closer to existing homes on Plumas Avenue and Portola Drive. Alternative 5, South of Frog Pond Caltrans Right-of-Way Alignment, has been added to the Final EIR to route bicycles around the Frog Pond. Alternative 5 would modify the portion of the alignment extending through the Frog Pond Wetland Preserve, so it routes the trail to the southern-most edge of the Frog Pond into the Caltrans SR 218 right-of-way, rather than following the existing trail through the southern portion of the Frog Pond. The new trail around the Frog Pond would be a boardwalk due to the sensitive natural resources and existing drainage ditch.

Response ORG 3.21

The commenter states that the EIR should consider restoration and weed removal at lands adjacent to the trail.

Mitigation Measure BIO-3(b) has been revised as follows:

A qualified (~~USFWS and CDFW approved~~) biologist shall prepare a project-specific Biological Resources Mitigation and Management Plan (MMP) for each segment individually to compensate for direct and indirect impacts to sensitive habitats, and other sensitive biological resources resulting from trail construction and operation. The MMP shall compensate for permanent loss of sensitive habitats, through the creation, restoration, and enhancement of in-kind sensitive habitat, as close to impacted areas as feasible within the study area, or on suitable preserve lands on the former Fort Ord. Mitigation for permanent loss of sensitive habitats shall be a minimum ratio of 1:1.

The USFWS and CDFW approval requirement was removed because TAMC does not have the regulatory authority to require USFWS and CDFW to review qualifications.

Mitigation Measure BIO-2(b) states “For activity that would occur within or adjacent to sensitive habitats, prior to start of construction an Invasive Weed Prevention and Management Program shall be developed by a qualified biologist to prevent invasion of native habitat by non-native plant species.”

Subject: Draft EIR Comments

Dear Mr. Deal,

I love the overall FORTAG project. The idea, however, of putting a trail through the Frog Pond Preserve is an absolutely dreadful idea. This is a very small preserve that is already heavily stressed, and it should remain open to walkers only with a narrow, mostly dirt trail. *Anything* that puts more stress on this *very limited habitat* should not even be considered!!

IND
1.1

Thank you for your time,

Alice Angell Green

Letter IND 1

COMMENTER: Alice Green

DATE: December 8, 2019

Response IND 1.1

The commenter states that they love the overall FORTAG project but that putting the trail through the Frog Pond is a bad idea. The commenter states that the Frog Pond is small, already stressed, and should be open to pedestrians only, with no additional stress on the habitat.

Please refer to Topical Response A for a discussion of impacts to the Frog Pond Wetland Preserve. As described therein, the trail width would be limited to eight feet through the Frog Pond Wetland Preserve, following the existing trail to minimize vegetation removal and associated biological impacts.

The preference for an alternative that maintains access to the Frog Pond for pedestrians only is noted. As described in Section 6, *Alternatives*, Alternative 5 would modify the portion of the alignment extending through the Frog Pond Wetland Preserve, so it routes the trail to the southern-most edge of the Frog Pond into the Caltrans SR 218 right-of-way. The alternative alignment would include signage to route bicycles to the new trail along SR 218. Pedestrians would have the option to follow the existing trail through the Frog Pond or use the new trail along SR 218. Please refer to Section 6, *Alternatives*, for additional details and environmental analysis of Alternative 5.

*****James Waidler. (831) 899-2226. Please continue to keep me abreast of this particular project status. Thanks

Letter IND 2

COMMENTER: James Waidler

DATE: December 11, 2019

Response IND 2.1

The commenter thanks TAMC staff for their presentation and receptiveness to public participation at the December 11 MPRPD meeting.

The comment is noted. Because the comment does not address the content of the Draft EIR, no further response is required.

Response IND 2.2

The commenter states that the unique ecological environment of the Frog Pond should be preserved.

Please refer to Topical Response A for a discussion of impacts to the Frog Pond. As described therein, impacts to biological resources within the Frog Pond Wetland Preserve would be less than significant with mitigation. In addition, the project would improve access to the Frog Pond Wetland Preserve, but would not change the use of the park. Lastly, several alternatives are considered in the Draft EIR that would avoid placing a trail through the park, including a new alternative that would route the trail adjacent to the park within the SR 218 right-of-way.

Response IND 2.3

The commenter states that constructing a trail in the Frog Pond would be expensive.

Analysis of project expenses is not included as part of the CEQA analysis. Per Section 15131 the CEQA Guidelines, economic issues may not be treated as significant effects. Therefore, a cost and benefit analysis for FORTAG is outside of the scope of this EIR.

Response IND 2.4

The commenter states that bicycle use in the Frog Pond would be disruptive to people who go there to walk and relax.

Please refer to Topical Response A for a discussion of impacts to people's enjoyment of the Frog Pond Wetland Preserve. Consideration of a peaceful sense of place is not a factor included in Appendix G of the *CEQA Guidelines*. Impacts to quality of life and enjoying a peaceful surrounding are not physical environmental factors addressed in CEQA and are therefore outside the scope of the EIR. However, the project's impacts that relate to human enjoyment, such as traffic and noise, would be less than significant.

Response IND 2.5

The commenter states that the project would expose Frog Pond visitors to carbon dioxide emissions and motor vehicle noise.

The proposed project is a trail that would promote alternative transportation. As described in Section 4.14, *Transportation*, the project would not generate an increase in motor vehicle activity that would result in new or increased carbon dioxide or noise impacts.

Response IND 2.6

The commenter states that vegetation removal and ground disturbance at the Frog Pond would impact the wildlife as well as the nearby residents and visitors.

Please refer to Topical Response A for a discussion of biological impacts at the Frog Pond and impacts to nearby residents. As described therein, impacts to wildlife species would be less than significant or less than significant with mitigation. Similarly, impacts to nearby residents from ground disturbance, such as noise, would be less than significant or less than significant with mitigation. Visitors to the Frog Pond Wetland Preserve would not be impacted by vegetation removal and ground disturbance because the project would not significantly impact aesthetics or biological resources in the Frog Pond.

Response IND 2.7

The commenter states that the Frog Pond is unique and is a treasure for local residents.

The comment is noted and herewith shared with TAMC decision makers for their consideration. Because the comment does not pertain to the adequacy of the EIR or CEQA process, no further response is required.

Response IND 2.8

The commenter comments on a separate project unrelated to the FORTAG project.

The comment does not pertain to the FORTAG EIR. As such, no further response is required.

James Waidler

Letter IND 5

COMMENTER: James Waidler

DATE: December 12, 2019

Response IND 5.1

The commenter discusses the feasibility of a bike route from Laguna Grande to General Jim Moore Boulevard along SR 218. The commenter states that bicyclist safety is important.

As discussed in Section 6, *Alternatives*, an alternative route along SR 218 was rejected from further analysis because a Class I trail is not feasible on SR 218 from Fremont Boulevard to the Frog Pond because Class I trails must have a width of at least eight feet with a two-foot or greater shoulder on each side of the path. SR 218 does not have the necessary width to accommodate a Class I trail due to the constrained width of the roadway including minimal shoulder width. In addition, routing the trail along SR 218 would result in safety impacts for trail users because SR 218 is a high-volume arterial. Trail users, specifically bicyclists, would be exposed to safety risks from vehicles traveling at high speeds. The commenter's statement regarding the importance of bicycle safety is noted.

Response IND 5.2

The commenter suggests adding a parking lot near General Jim Moore Boulevard.

As stated on page 2-26 of the Draft EIR, "FORTAG does not include construction of any new vehicle parking areas; however, some existing on-street parking may be re-organized to improve safety with new intersections or trail crossings." However, the proposed project does not preclude individual jurisdictions from constructing new parking lots as they deem necessary. The additional of new parking lots is not analyzed in the Draft EIR. Existing parking lots were determined to be adequate to serve the trail because the alignment is intended to provide direct bicycle and pedestrian access for most trail users to and from residences, workplaces, and hospitality bases. Please refer to Figure 2-14 for existing parking facilities that would serve trail users, such as the parking area at General Jim More and Coe Avenue.

Response IND 5.3

The commenter asks when Eucalyptus Drive will be opened for vehicle use.

The comment does not pertain to the FORTAG EIR. Please contact TAMC separately for questions or comments on other projects. No further response is required.

Subject: "Fortag" & the Frog Pond

Hello-

I am not sure who to address this to.

I'd like this email to be incorporated into the EIR report, and wherever comments from peninsula residents count, regarding a bike path traveling through the Frog Pond Monterey Regional Park.

IND
6.1

I am COMPLETELY opposed to part of the "Fortag" connecting bike path going through the "FrogPond" Regional Park in Del Rey Oaks.

That will ruin that park-for community use & the wildlife that lives there.
I would hope a decent EIR would show that.

I ride a bike around the Peninsula, and I am totally opposed to this connecting path going through the Frog Pond.

IND
6.2

Why not use the existing green painted bike lane on Carlton Dr. to connect to Gen. Jim Moore Blvd. in Del Rey Oaks? It would just have to be opened at the dead end-to bike use only, & would connect to Gen. Jim Moore Blvd. & to Ryan Ranch.

It's absolutely ridiculous to think the bike path along the pond will not ruin it-in many ways.

Thank you for your consideration in NOT putting the path along/through the pond in Del Rey Oaks.

B. Langdon.
(Bjlangdon@yahoo.com)

Letter IND 6

COMMENTER: Barbara Langdon

DATE: December 13, 2019

Response IND 6.1

The commenter voices their opposition to routing the trail through the Frog Pond. The commenter states that running the trail through the Frog Pond would ruin the park for community use and wildlife.

Please refer to Topical Response A for a discussion of impacts to biological resources and human enjoyment at Frog Pond. As described therein, impacts to biological resources would be less than significant, and the project would improve access to a public park. Consideration of a peaceful sense of place is not a factor included in Appendix G of the *CEQA Guidelines*. Impacts from simply not wanting more people in the park are not physical environmental factors addressed in CEQA and are therefore outside the scope of the EIR. Related impacts – such as visual character and noise – were identified in the Draft EIR as less than significant or less than significant with mitigation.

The commenter's preference for avoiding the Frog Pond Wetland Preserve is noted and herewith shared with decision makers for consideration.

Response IND 6.2

The commenter recommends routing the trail along the existing green painted bike lane on Carlton Drive to connect to General Jim Moore Boulevard in Del Rey Oaks.

Alternative 2, Increased Use of Roadways, would modify the alignment to reduce impacts to natural resources, primarily sensitive habitat, by increasing the use of existing roadways. Alternative 2 would eliminate the Canyon Del Rey/SR 218 segment and replace the segment with an alignment that would follow the PG&E easement on Plumas Avenue in the City of Seaside from Fremont Boulevard on the west to General Jim Moore Boulevard on the east. This alternative alignment would bypass the City of Del Rey Oaks, eliminating the proposed trail through Work Memorial Park, Angelus Way, Del Rey Oaks Park, and the Frog Pond Wetland Preserve.

From: Barbara Bastian <b3bastian@att.net>
Sent: Saturday, December 14, 2019 7:33 AM
To: Rich Deal <rich@tamcmonterey.org>
Subject: Frog Pond Bike Path

Please register my NO vote for ruining a peaceful, natural walking path through the Frog Pond! I frequently enjoy the walking path in the Frog Pond, however I would NOT use this for biking and if it does go through, I certainly would not want to use it for walking. I ride my bicycle in other appropriate locations.

IND 7.1

There is no reason that bikes have to go THROUGH this area. Please look for an alternative that uses the roadways rather than spoiling this quiet walking path.

IND 7.2

Thank you very much for your consideration of the natural environment.

There are plenty of places to ride a bike, and it would be more useful to have sidewalks along that same corridor with a bike path beside it.

IND 7.3

Sincerely, Barbara Bastian

Letter IND 7

COMMENTER: Barbara Bastian

DATE: December 14, 2019

Response IND 7.1

The commenter expresses opposition to opening the Frog Pond Wetland Preserve to bicycles.

The commenter's preference is noted and herewith shared with decision makers for their consideration. Please also refer to Topical Response A for a discussion of impacts to the Frog Pond.

Response IND 7.2

The commenter expresses opposition to allowing bicycle use through the Frog Pond, and encourages selection of an alternative trail route that utilizes roadways rather than the Frog Pond.

The commenter's preference for not routing the trail through the Frog Pond is noted. The EIR includes discussion of alternatives that would avoid the Frog Pond, including Alternative 2, Increased Use of Roadways.

Response IND 7.3

The commenter states that there are places other than Frog Pond to ride bicycles. The commenter states that adding sidewalk and a bike path along a roadway is preferable to adding a bike path through the Frog Pond.

The commenter's preference is noted. However, adding a bicycle path along the existing roadway is inconsistent with the FORTAG objectives, which are to provide a safe, accessible, and separated alternative to motorized transportation and connect people to open space. In addition, there are safety concerns associated with routing the trail along a roadway, such as exposing trail users to vehicles moving at high speeds.

There are four alternatives available that would avoid routing the trail through the Frog Pond. Please refer to Response ORG 3.20 for a discussion of available alternatives and how they would avoid the Frog Pond.

Subject: Fw: FORTAG TRAIL

Dear Mr. Deal:

As a resident and homeowner residing at 943 Angelus Way in Del Rey Oaks, I am opposed to the trail's proposed path along my street for many reasons, but most importantly safety.

IND 8.1

The street is basically a culdesac with the city park at the end. Park gates are closed at dusk to keep the park safer but we do have added traffic during the day by park users. Parking on the street is at times used for larger events. Residents come and go from their driveways along the street on the creek side. As there are no sidewalks residents walk on the street. This situation does not provide adequate room to add in a bike and hiking trail in a safe manner for all.

To provide access and parking to Frog Pond hikers, the former RV lot could be used with a lighted crosswalk across Canyon Del Rey. This would ensure safer access but not include a bike trail running through this sensitive park environment.

IND 8.2

A recreation trail belongs in or along public roads or in greenbelt areas such as the current trail along the coast not through established residential areas and should include separated areas for walkers.

IND 8.3

Thank you,

Susan Villani

831.236.2035

Letter IND 8

COMMENTER: Susan Villani

DATE: December 14, 2019

Response IND 8.1

The commenter states that they are a Del Rey Oaks resident opposed to the FORTAG alignment along Angelus Way, for many reasons, particularly safety reasons. The commenter states that Angelus Way is a cul-de-sac ending at Work Memorial Park. The commenter states that residents walk on the street because there is no sidewalk, and that there is not adequate room to add a trail.

The commenter's concerns regarding trail safety are noted. Refer to Impact PS-1 in Section 4.13, *Public Safety and Services*, and Impact T-3 in Section 4.14, *Transportation*. As noted therein, project impacts related to public safety and traffic safety were determined to be less than significant or less than significant with mitigation.

It should be noted that the proposed project would route the trail along Angelus Way, but would not physically alter the street other than to add signage. As such, additional room is not needed to add a trail. To clarify the extent of physical improvements that would occur along Angelus Way, Section 2.4.2, *Trail Design*, of the EIR has been revised as follows:

The Trail would cross SR 218 from the Frog Pond Wetland Preserve to the south side of SR 218 through a new undercrossing and continue east on the south side of Del Rey Park, along the existing paved Angelus Way right-of-way, and then through Work Memorial Park to the Safeway Shopping Center. Physical improvements to Angelus Way would consist of wayfinding signage added to Rosita Road and Del Rey Park indicating the Trail route. Adjacent to the Safeway market, the Trail would abut Canyon Del Rey Boulevard/SR 218, crossing Fremont Boulevard within the existing intersection crosswalk.

Response IND 8.2

The commenter states that a former RV lot could be used to provide access and parking to the Frog Pond, with a lighted crosswalk across Canyon Del Rey to ensure safe access to the Frog Pond without adding a bike path there.

The commenter's suggestion is noted. TAMC considered routing the trail through the RV lot, which is under City of Del Rey Oaks ownership; however, the City requested that this route be removed from consideration.

The proposed crossing of SR 218 is an undercrossing beneath SR 218 approximately 140 feet southeast of Carlton Drive. An undercrossing is proposed at this location because it is the safest option available due to high vehicle speeds and traffic volumes on SR 218. As discussed in Section 6, *Alternatives*, an alternative for an overcrossing was considered but rejected from further analysis in the EIR. The overcrossing alternative was rejected because the footprint for the overcrossing would encroach into the Frog Pond Wetland Preserve and would require extensive grading in environmentally sensitive areas to accommodate the 17-foot clearance in order to be ADA accessible. In addition, an overcrossing would substantially conflict with overhead utility lines, necessitating extensive and expensive relocations. Other crossing options for SR 218 include an at-grade (mid-block) crossing or new pedestrian signal and crosswalk at SR 218 and Carlton Drive. The

commenter's preference for a crossing at the RV lot with a lighted crosswalk has been noted and is hereby forwarded to decision makers for their consideration.

Response IND 8.3

The commenter states the opinion that recreation trails are appropriate in or along public roads or in greenbelt areas rather than in residential areas. The commenter states that recreation trails should include separated areas for pedestrians.

The commenter's opinion is noted. The project would utilize existing paths and roadways where possible to minimize impacts to natural environments while functioning as an active transportation artery and connecting people to open space. Where the trail would occur along Angelus Way, physical improvements would be limited to signage. However, one of the project objectives is to provide a safe, accessible, and separated alternative to motorized travel. Routing the alignment along public roads increases safety risks for trail users exposing them to vehicles moving at high speeds. There are two alternatives available as discussed in Section 6, *Alternatives*, of the Draft EIR would avoid Angelus Way and route the trail on other public roads or greenbelt areas. Alternative 1, No Project, not construct FORTAG as planned and there would be no 28-mile trail. Alternative 2, Increased Use of Existing Roadways, would eliminate the Canyon Del Rey/SR 218 segment east of Fremont Boulevard and route the alignment to follow the PG&E easement on Plumas Avenue in the City of Seaside from Fremont Boulevard on the west to General Jim Moore Boulevard on the east.

Subject: Del Rey Oaks Frog Pond

To Whom It May Concern:

I have been a resident of DRO for 28 years. Part of our decision to choose DRO for our home community is the quiet residential atmosphere. This atmosphere includes the Frog Pond. It is a quiet and serene place to enjoy the wonders of nature. I have taken my children from the time they were born riding in a sling on my shoulder in the Frog Pond on nature hikes. They have grown up exploring the trees, wildlife, and of course the frogs. I still walk the trail at least once a week and always enjoy the peaceful surroundings it entails. All of these experiences have occurred in a safe environment. We didn't have to worry about bikes blazing through the trails, or turning a corner and facing a racing bike coming straight at us. If the Frog Pond is opened up and used as a thorough fare for bikes it would create havoc. The tranquility, safety and preservation would all be jeopardized by allowing bikes. Not just for the wildlife but also the visitors. No bikes should be allowed. Period!!

Subject: FORTAG - Frog Pond

Hello -

I am writing as a Del Rey Oaks resident whose backyard abuts the Frog Pond Wetland Preserve from Carlton Drive. I am not opposed to the project, **however I am adamantly opposed to the northerly alignment option.** I am one of several residents who do not want to see, hear or deal with the increased foot/bike traffic that would be at the back of our properties. In addition, it would require significant alterations to the landscape of that portion of the Frog Pond, which goes against the entire idea of it being a preserve. In fact, a quick look in the dictionary provides the definition of preserve.

IND 12.1

IND 12.2

pre·serve | prə'zərv | verb [*with object*] maintain (something) in its original or existing state: *all records of the past were zealously preserved.*

Any option or alternative of this project for the Frog Pond Wetland Preserve that alters or significantly changes the makeup of it is a bad idea and would simply ruin what is a hidden gem. The alignment that runs parallel to 218 seems to be the option that will cause the least amount of disturbance and alteration to the landscape due to the current width of the path through that area, as well as avoid having an increase in foot/bike traffic and noise that will reduce the quality of life for those whose backyards abut the northern path of the Frog Pond. If there are further questions please feel free to reach out.

IND 12.3

Thank you
Chris

Letter IND 12

COMMENTER: Christopher Fugitt

DATE: December 17, 2019

Response IND 12.1

The commenter expresses opposition to the Frog Pond Wetland Preserve Northerly Alignment alternative (Alternative 4) and to increased pedestrian or bicycle use near their property.

The commenter's opposition to Alternative 4 is noted and herewith shared with TAMC decision makers for consideration. Please refer to Topical Response A for a summary of impacts related to the Frog Pond, including a discussion of Alternative 5, which would avoid bicycle use through the Frog Pond.

Response IND 12.2

The commenter states that altering the landscape of Frog Pond would conflict with the fact that the Frog Pond is a preserve. The commenter provides a dictionary definition of the word "preserve."

Please refer to Topical Response A for a discussion of public access at the Frog Pond. As described therein, Frog Pond Wetland Preserve is a public park managed by the Monterey Peninsula Regional Park District. The proposed trail would improve the existing public access to the park. The commenter's preference for avoiding any alterations within the Frog Pond Wetland Preserve is noted and herewith shared with TAMC decision makers for their consideration.

Response IND 12.3

The commenter states that any trail route through the Frog Pond is a bad idea and would ruin the park. The commenter expresses preference for routing the trail parallel to SR 218.

The commenter's preference for routing the trail along SR 218 is noted. As discussed in Section 6, *Alternatives*, an alternative that would extend along SR 218 between Fremont Boulevard and the Frog Pond Wetland Preserve was considered, but ultimately rejected from detailed analysis in the EIR because such an alternative would not be feasible, would not meet the purpose and objectives of FORTAG, and would not include ATP funding.

Please refer to Response 2.1, which introduces a new Alternative 5, South of Frog Pond Caltrans Right-of-Way Alignment, which would route the trail to the southern-most edge of the Frog Pond into the Caltrans SR 218 right-of-way. The full description and analysis of this alternative is provided in Section 6, *Alternatives*, of this Final EIR.

Subject: FORTAG presentation in Monterey

Hi Rich,

I attended the presentation at the City of Monterey Council meeting on 12/17. I'm very excited about the project and I have a few comments pertaining more to the design stage of the project than the EIR report.

IND
13.1

I understand that restrooms being built for trail users might not happen until future stages of the project. I would like to recommend that signs be installed showing where existing public restrooms near the trail are located. I foresee many trail users using the trail as part of longer trips up and down the coast and in need of the use of a restroom.

I have been on many multi use trails all over the country and many have been able to stay litter free without trash cans. They post signs in key locations to pack your trash. I would recommend that trash cans only be placed where they can be emptied with minimum effort and on regular schedules. The worst thing is to have trash cans that do not get emptied and overflow.

IND
13.2

I have noticed on the Monterey Recreation Trail that there are several different sections of the trail that are in poor condition. The different agencies responsible for their sections of the trail maintain the trail at different levels. I would like to recommend that there is an agreement to what level each agency agrees to maintain the new trail established prior to the trail being built.

IND
13.3

I would also like to see a Friends of FORTAG group established to help with promotion and upkeep of the trail. They could help with fundraising for future improvements and help with safety issues that come up.

IND
13.4

Thank you.

Letter IND 13

COMMENTER: Jack Smith

DATE: December 17, 2019

Response IND 13.1

The commenter states that they are excited about the project and have comments on the design. The commenter recommends adding trail signage directing users towards existing public restrooms.

The commenter's recommendation regarding signage is noted and herewith shared with TAMC decision makers for their consideration. Because the comment pertains to a project design feature, rather than the adequacy of the EIR or CEQA process, no further response is required.

Response IND 13.2

The commenter recommends minimizing the amount of trash cans on the trail and recommends only adding trash cans that can be emptied on a regular basis.

The commenter's recommendation regarding trash receptacles is noted and herewith shared with TAMC decision makers for their consideration. It is TAMC's intent that trash cans be provided in easily accessible areas, and not in more remote areas of the trail that would be more difficult to maintain. In addition, Mitigation Measure AG-4(c) requires implementing entities to regularly empty trash receptacles.

Response IND 13.3

The commenter recommends that an agreement between the implementing entities regarding what level of maintenance would occur on the trail.

The commenter's recommendation regarding a trail maintenance agreement is noted. As described in Topical Response B, each underlying jurisdiction would enter into a MA with TAMC, and then a SA for a segment for which funding is found, which would identify maintenance responsibilities for the portion of FORTAG within the jurisdiction's boundary. It will be the responsibility of each underlying jurisdiction to maintain any segment within its jurisdictional boundaries. None of the FORTAG segments will be developed without agreement from the underlying jurisdiction accepting responsibility to maintain that segment.

Response IND 13.4

The commenter recommends establishment of a Friends of FORTAG group for promotion and upkeep of the trail.

The commenter's recommendation to establish a Friends of FORTAG group is noted. Please refer to Letter ORG 1, which was submitted on behalf of the Fort Ord Recreation Trails Friends (FORT Friends).

Subject: Del Rey Oaks Bike Trail

Rafael Payan.

I'm not convinced that a bike trail trough Del Rey Oaks is a good idea. If it goes trough Angeles way you would upset the residents there with increased traffic and if it was routed through Cayon Del Rey it would create more confusion with bicyclist and motorist. I routinely turn left onto Work street and very often a car will pass me in the bicyclist lane. Cars passing and bicyclist in the same lane is a accident waiting to happen.

IND 16.1

IND 16.2

Just my thoughts as a Del Rey Oaks resident.

Michael O'Brien

Letter IND 16

COMMENTER: Michael O'Brien

DATE: December 19, 2019

Response IND 16.1

The commenter states that a bike trail on Angelus Way would upset the residents there due to increased traffic.

The project is not anticipated to substantially increase traffic congestion on Angelus Way or elsewhere. The project is a bike path that would improve the region's alternative transportation network. The project would not add new motor vehicle parking spaces or other changes to roadways that would result in motor vehicle congestion. As described in Section 4.14, *Transportation*, of the EIR, all impacts related to transportation would be less than significant without mitigation.

Response IND 16.2

The commenter states that routing the trail along SR 218 would create confusion between bicyclists and motor vehicle use. The commenter states that a bike lane along a roadway could result in traffic accidents.

The proposed project would cross SR 218 via a new underpass, but would not run parallel to SR 218. As discussed in Section 6, *Alternatives*, an alternative that would extend along SR 218 between Fremont Boulevard and the Frog Pond Wetland Preserve was considered, but ultimately rejected from detailed analysis in the EIR because such an alternative would not be feasible, would not meet the purpose and objectives of FORTAG, and would not include ATP funding.

To: Rich Deal <rich@tamcmonterey.org>
Subject: Comments from Del Rey Oaks

Hello Mr. Deal,

I want to thank you and your TAMC team for all the efforts that have gone into planning for the FORTAG trail. Moreover, you have the gratitude of folks here in Del Rey Oaks to ask us for input on the plans. We are glad to be able to share in this, and hope that whatever comes to pass will work for everyone and the the funds will be spent wisely.

IND 17.1

As I mentioned during my attendance at both the TAMC and Monterey Peninsula Regional Park District public forum meetings recently, there are some concerns regarding access to the Frog Pond Preserve.

IND 17.2

Given that it is preserve for plants and wildlife, rather than a public recreation park, we are asking that it remain that way. Either option for an 8 foot wide trail through the Preserve would have negative impacts on it, and possibly create numerous other issues. Since it is situated in a residential area, such a path would increase noise, traffic, security, and fire danger potential. These issues would likely increase costs to the City of Del Rey Oaks in the form of police and fire services, traffic on already busy Canyon Del Rey/Highway 218 and parking on city streets.

IND 17.3

We would ask you to consider a less intrusive access between the Coast trail and General Jim Moore Boulevard. You likely have all of these under consideration, but I will offer four options.

IND 17.4

1. Using the PG&E power line access trail along Plumas Avenue. The trail could then extend to General Jim via Mescal to Hilby. This would avoid the narrow single lane portion of Gen Jim and allow for safe crossing at the Hilby intersection.

IND 17.5

2. Using the above trail, connecting to Carlton Drive on the west side to Canyon Del Rey. Using the crosswalk in front of City Hall, the trail could follow the highway on the south side to the next crosswalk at the General Jim Moore traffic light.

IND 17.6

3. Using the Plumas and Carlton route, stay on the north side of Hwy 218 and build a trail over the creek that runs parallel to the road, then go into the Preserve for a short distance, away from homes, to the present access on General Jim.

IND 17.7

4. Not build an access trail through Del Rey Oaks at all, and focus more on the trail potential farther north near CSUMB. Option in Seaside at access the bike trail on Broadway might also be feasible. You will likely find much more walking and bicycle potential there to warrant funding access to the Coast trail.

IND 17.8

We hope you will find the best way for all. The FORTAG trails are a wonderful idea, but given the changes in elevations, might be better served to built in several segments with access points for parking and basic services. Thank you for considering our input and we wish you much success with the project.

IND 17.9

Best Regards,

Jim Vanderzwaan

Letter IND 17

COMMENTER: Jim Vanderzwaan

DATE: December 22, 2019

Response IND 17.1

The commenter thanks TAMC staff for their efforts and public engagement on the FORTAG project.

The comment is noted. Because the comment does not pertain to the adequacy of the EIR or CEQA process, no further response is required.

Response IND 17.2

The commenter states that there are concerns regarding routing the trail through the Frog Pond. The commenter states that the Frog Pond is a preserve, not a public park, and should remain that way.

Please refer to Topical Response A. As described therein, the Frog Pond Wetland Preserve is a public park managed by the Monterey Peninsula Regional Park District (MPRPD). FORTAG would continue public use of the preserve, making it more accessible consistent with MPRPD's vision for their preserves.

Response IND 17.3

The commenter states that routing the trail through the Frog Pond would increase noise, traffic, security, and fire danger in the area.

The commenter's concerns are noted. The EIR found impacts related to noise, transportation, public services, and wildfire to be less than significant without mitigation. Please refer to the pertinent EIR sections for analysis of those issue areas, and to Topical Response A for a summary of these issues within the Frog Pond Wetland Preserve.

Response IND 17.4

The commenter expresses a preference for a less intrusive connection between the Coastal Rec trail and General Jim Moore Boulevard, and introduces a list of four suggestions.

The commenter's preference for an alternative to the proposed Canyon del Rey/SR 218 segment of FORTAG is noted. Several alternatives considered in Section 6, *Alternatives*, would either avoid Del Rey Oaks all together, or provide an alternative route through or around the Frog Pond Wetland Preserve. These alternatives are summarized below:

- Alternative 1, the No Project alternative, would eliminate FORTAG construction. Under this alternative, there would be no new 28-mile trail or trail amenities, including within Del Rey Oaks.
- Alternative 2, Increased Use of Roadways, would modify the alignment to reduce impacts to natural resources, primarily sensitive habitat, by increasing the use of existing roadways. Alternative 2 would eliminate the Canyon Del Rey/SR 218 segment and replace the segment with an alignment that would follow the PG&E easement on Plumas Avenue in the City of Seaside from Fremont Boulevard on the west to General Jim Moore Boulevard on the east. This alternative alignment would bypass the City of Del Rey Oaks, eliminating the proposed trail

through Work Memorial Park, Angelus Way, Del Rey Oaks Park, and the Frog Pond Wetland Preserve.

- Alternative 4, Frog Pond Wetland Preserve Northerly Alignment, would modify the portion of the alignment extending through the Frog Pond Wetland Preserve, so it would follow the existing trail through the northern portion of the park, rather than the existing trail through the southern portion. This alternative would bring the trail closer to residents on Carlton Drive, but would reduce impacts to wetlands in the Frog Pond because there are fewer wetlands in the northern portion of the preserve.
- Alternative 5, South of Frog Pond Caltrans Right-of-Way Alignment, was added in response to comments on the Draft EIR. This alternative would modify the portion of the alignment extending through the Frog Pond Wetland Preserve, so it routes the trail to the southern-most edge of the Frog Pond into the Caltrans SR 218 right-of-way (ROW), rather than following the existing trail through the southern portion of the Frog Pond.

Response IND 17.5

The commenter suggests an alternative that would utilize the PG&E power line access trail along Plumas Avenue in Seaside, extending from Mescal Avenue to Hilby Avenue to utilize the existing intersection at Hilby Avenue and General Jim Moore Boulevard.

The commenter's suggestion is similar to Alternative 2, which is summarized in Response IND 17.4 above. For additional detail on this alternative alignment and the associated impacts, please refer to Section 6, *Alternatives*.

Response IND 17.6

The commenter suggests an alternative that would utilize the PG&E power line access trail as described under comment IND 17.5, then continuing down Carlton Drive on the west to SR 218 on the east, then using the south side of SR 218 to the crosswalk at General Jim Moore Boulevard.

The Carlton Drive portion of the commenter's suggestion is included in the proposed FORTAG alignment. An alternative utilizing SR 218 was considered in the Draft EIR, but ultimately rejected from detailed analysis because such an alternative would not be feasible, would not meet the purpose and objectives of FORTAG, and would not include ATP funding. Please refer to Section 6, *Alternatives*, for additional information.

Response IND 17.7

The commenter suggests an alternative that would build upon the alignment described in comments IND 17.5 and IND 17.6, staying on the north side of SR 218, over the creek that runs parallel to the road, then into the Frog Pond for a short distance towards General Jim Moore Boulevard.

The commenter's suggestion is similar to Alternative 5, which was added in response to comments on the Draft EIR. Refer to Response IND 17.4 for a brief summary of this alternative, and to Section 6, *Alternatives*, of this Final EIR for the full description and analysis of Alternative 5.

Response IND 17.8

The commenter suggests an alternative that would avoid Del Rey Oaks.

Alternative 2 would bypass the City of Del Rey Oaks, eliminating the proposed trail through Work Memorial Park, Angelus Way, Del Rey Oaks Park, and the Frog Pond Wetland Preserve, as summarized in Response IND.4 above. The commenter's suggestion to focus on other trail segments is noted.

Response IND 17.9

The commenter states that due to changes in elevations, separated trail segments with access points for parking and services might be preferable to the proposed alignment.

The commenter's concern regarding elevation is noted. As listed in Section 2.3, *Project Purpose and Objectives*, the project's objectives include the goal of maintaining gentle grades. As stated in Section 2.4.2, *Trail Design*, FORTAG would maintain gentle grades, meeting Americans with Disabilities Act (ADA) requirements for Class I bike paths throughout the entirety of the off-street portion of the trail (approximately 99 percent of the total trail length). The trail accessibility standards include requirements for a firm and stable trail surface and a maximum grade of 12 percent.

Larry Turner
26 Carlton Dr.
Del Rey Oaks

Dear Mister Deal,

I'm opposed to any part of the trail running through the Frog Pond.
At one time I worked For the Department of Fish and Game doing
biological studies of
riparian habitats. I did studies of most streams in Santa Cruz,
Monterey, San Benito and San Luis Obispo counties. I have seen numerous
"Frog Pond" type
habitats. From an ecological perspective, these habitats are
invaluable for the environmental health of ecosystems. From degradation
of the environment,
most of these are in a fragile state. The Frog Pond is no
different. Any disturbance will alter the well being of this fragile
system.

IND 18.1

Subject: FORTAG trail through Frog Pond

Dear Mr. Deal,

I think that generally speaking, a hiking and biking trail is a wonderful thing. It reduces the use of cars, encourages physical fitness, and reduces air pollution and road noise.

IND 19.1

However, I strongly disagree with locating part of the trail in any part of the Frog Pond Preserve. I have been to the Preserve many times over the past 15 years. It is a quiet, wild, beautiful place with many birds and animals. We have seen unique bird species thriving and nesting there, including warblers and grosbeaks. It is peaceful. There are also some homes above the Preserve that would be directly affected by greater numbers of people using the park as a throughway down below,

I have hiked in many areas in the U.S. In my experience, allowing bikes to come through would create more hazards due to accidents, increased noise from vehicles (which could easily escalate to the use of motorized or assisted bikes). This directly leads to in less respect for the environment and even destruction of sensitive areas. In short, I do not like to hike in a quiet area where I have to watch my back for reckless and loud bikers!

IND 19.2

Please reconsider this route and allow for the Pond to continue being a sanctuary for creatures and their human supporters.

Laurie Bonilla

Letter IND 19

COMMENTER: Laurie Bonilla

DATE: December 27, 2019

Response IND 19.1

The commenter expresses opposition to routing the trail through the Frog Pond. The commenter describes the tranquility and habitat at the Frog Pond, and states that routing the trail through the Frog Pond would affect people living in nearby homes.

The commenter's concerns regarding routing the trail through Frog Pond are noted. Please refer to Topical Response A for a discussion of impacts to the Frog Pond Wetland Preserve, including those related to biological resources and neighbor disruptions. As described therein, impacts related to noise, public safety, and transportation as a result of the project would be less than significant. In addition, despite its name, the Frog Pond is not a reserve that prohibits public access, but a public park with an existing trail incorporated through it. FORTAG would make the Frog Pond accessible to more people as part of a larger trail network and therefore be consistent with the vision of the MPRPD to increase recreational opportunities.

Response IND 19.2

The commenter states that bike use would create safety hazards, noise, and habitat destruction. The commenter states that they would not like to hike among reckless and loud bikers. The commenter encourages maintaining the Frog Pond as a sanctuary for wildlife and wildlife supporters.

Refer to Response IND 19.1 above and Topical Response A for a discussion of safety, noise, and habitat impacts in the Frog Pond. The commenter's concern regarding bikes in the Frog Pond is noted and herewith shared with TAMC decision makers for consideration. Refer also to the new Alternative 5, South of Frog Pond Caltrans Right-of-Way Alignment, which would separate bicycles from hikers in the Frog Pond by developing a new trail to the southern-most edge of the Frog Pond into the Caltrans SR 218 ROW.

Subject: Frog Pond

Dear Rich Deal,

I have visited Frog Pond in Del Rey Oaks for years. This migratory and local bird sanctuary, and natural preserve for other critters like frogs and deer (yes, I surprised deer in the park one morning) has no equal in the area. The homeless have made the nearby Laguna Park their own, as they must. But Frog Pond remains mostly natural. So no, this is not the area that should succumb to any further human intrusion. There must be other room, or even aerial bridges, that can accomodate a trail that apparently must, by law, accomodate electric bikes with their noise and dust. Don't imagine that somehow you can keep the hordes of humans out. Once you build a trail, they will come.

IND 20.1

So puh-leeze, do NOT allow a trail in Frog Pond. Give those humans who value wildlife a place to experience some semblance of it. There are many miles of space where humans who do not value that experience can hike, bike, or zoom by on a trail

Please keep Frog Pond a place for a different kind of human experience with the outdoors.

Do NOT allow a trail in Frog Pond.

Sincerely,
Edward Perry

Letter IND 20

COMMENTER: Edward Perry

DATE: December 27, 2019

Response IND 20.1

The commenter describes the wildlife at the Frog Pond and encourages selection of an alternative that does not route the trail through the Frog Pond. The commenter states that if the trail is built, hordes of humans will use it. The commenter encourages maintaining the Frog Pond as a place for valuing wildlife.

The commenter's preference for an alternative that avoids the Frog Pond is noted. Please refer to Topical Response A for a discussion of biological resource impacts and public use at the Frog Pond.

Subject: FORTAG public comment: It's GREAT!

Dear Mr. Deal and the TAMC team,
Thank you very much for working with the FORTAG project. Encouraging safe biking in a community has so many wonderful implications. By making biking more accessible and safe, FORTAG has the potential to greatly increase bike ridership in the area. This improves human health. It also decreases pollution. The trails have the benefit of joining workplace hubs (like Ryan Ranch and CSU Monterey Bay) to residential areas and recreational sites. As a bike commuter myself, I see the FORTAG trails as a welcome addition to the already existing recreational and bike trails. And I look forward to many more years of bike commuting. Thank you for making biking more welcoming and safe.

IND 21.1

Your hard work will improve the lives of the people in this community.

I look forward to the day I get to ride the FORTAG trails with my friends and colleagues,

Sincerely,

Elysha Iversen
Seaside Resident

Letter IND 21

COMMENTER: Elysha Iversen

Subject: Concerns re: Proposed FORTAG Bike Trail

Dear Mr. Deal,

I was excited to learn of plans to create a 28 mile Recreational Trail and Greenway that would transverse Marina, Seaside, Laguna Grande Park and Del Rey Oaks. What a great resource for the community! Unfortunately, shortly after I learned of the planned trail I discovered to my utter dismay that the proposal would route the trail right through Del Rey Oak's Frog Pond Wetland Preserve. It makes no sense to create a new outdoor recreational opportunity at the sacrifice of another. People who walk through the frog preserve expect tranquility and that both the plant and animal wildlife found there be prioritized and protected. Inviting bikers to cut right through the frog pond directly undermines its purpose and puts the frogs and plant life there, at risk. Please, do not support the trail as currently configured; this unique and urgently needed frog pond habitat is home to already habitat deficient creatures that deserve protection and should not be harmed to satisfy recreational desires that can easily be rerouted and re-channelled.

Subject: FORTAG EIR Comment

Dear Mr. Deal,

I'm writing to express my concerns over the proposal to allow bicycling through the Frog Pond Wetland Preserve as part of the FORTAG project. The Frog Pond provides much needed habitat for plant and animal species including amphibian species that have been negatively impacted by prior human activities. It is simply too delicate for bicycles.

IND 23.1

I am also concerned about the impact cycling would likely have on the public enjoyment of the natural setting, as well as to the safety of other trail users, including children, having to be wary of passing bicycles.

Please consider the experience of all users.

Sincerely,

Peter Kwiek
Salinas

Letter IND 23

COMMENTER: Peter Kwiek

DATE: January 1, 2020

Response IND 23.1

The commenter states that they are concerned about allowing bicycle use at the Frog Pond, due to impacts on delicate wildlife habitat, human enjoyment of the natural setting, and safety for other trail users.

The commenter's concerns regarding hazards from bike use are noted. The trail width would be reduced through the Frog Pond in order to reduce impacts to biological resources. Therefore, cyclists and pedestrians would share a narrow trail. The narrower trail width would result in reduced speeds by bike users. Furthermore, as described in Section 2.5 of the EIR, *Project Operation and Maintenance*, TAMC and each underlying jurisdiction of FORTAG would enter into an MA and then a SA that identifies maintenance responsibilities and trail use rules. No FORTAG segment would be developed without agreement from the underlying jurisdiction accepting responsibility (either itself or through arrangements) to maintain that segment and enforce applicable rules.

Please refer to Topical Response A for further discussion of impacts to biological resources within the Frog Pond Wetland Preserve. Impacts related to human enjoyment of the natural setting are not physical environmental factors addressed in CEQA and are therefore outside the scope of the EIR.

Re: Frog Pond Portion of the FORTAG bicycle trail

Dear Mr. Deal,

I am opposed to the proposed bicycle trail through the Frog Pond. The written descriptions of the alternative in the EIR, either to the north or south, would potentially ruin the character of the park.

IND 24.1

I walk the Frog Pond trail with my partner 1-4 times per month, year-around. For comparison, she and I also frequently walk the 12-16-foot wide bike/pedestrian Monterey Recreational Shoreline Trail, during which we are vigilantly aware of the continual competition for space between walkers and bikers. Bicyclists have the attitude that they have the right-of-way. The Frog pond is a small, intimate nature preserve. At the center of the preserve is a vernal pond that attracts water fowl, other birds and animals. The vernal pond provides a strong seasonal experience. The character of the trail is one of the most tranquil walks in the MPRPD system of parks. The Frog Pond is a favorite birding habitat. The walk is frequented by the elderly, adults, children, and dogs. This is a park to be walked. I know that the TMAC and FORTAG committee members have walked the trail, but I wonder if they have “experienced” the trail.

My preferred mitigation is alternative 2, which eliminates the path through the Frog Pond.

IND 24.2

Alternative 4 is designed to mitigate concerns regarding the Frog Pond. Quotes from the EIR include: “alternative 4 would meet all the project objectives”. “The purpose of this alternative is to reduce impacts to the Frog Pond by minimizing the loss of wetlands”. “Overall, the impact to aesthetics under Alternative 4 would be less than significant with mitigation, and the impacts would be similar to the proposed project.” The statements indicate that alternative 4 mitigates concerns. However, never in the EIR are the present use of the Frog Pond, other than being a wetland, and present aesthetics discussed. The bike path through the Frog Pond would be intrusive and disturbing to the present functional use of the park and the impact on aesthetics would be substantial.

Alternative 4 proposes to have an 8-foot-wide path through the Frog Pond, which is not wide enough in my opinion to accommodate both walkers and bikers. In conversations with TAMC, they say there would be separate paths for bikes and walkers, although this is not stated in the EIR. Of the two alternative bike paths through the Frog Pond and assuming two separate paths, the southerly route is totally unacceptable owing to the lack of space.

IND 24.3

The northerly route could accommodate separate bike and walking paths for most of the route. The paths should be separated by at least 20 feet and the more the better. Routes should be chosen to separate the two paths by vegetation. This is easily accommodated over the first half of

IND
24.4

the trail, but becomes more difficult near the two most contemplative sections of the trail- at the redwood grove where there is a meditation bench and at the bird watching platform. Maintaining 2 separated trails past the bird walking platform is problematic owing to the narrow distance between the platform and the apparent property owner's fence. To maintain a bird watching platform with continued serenity, not disturbed by bicyclers whizzing by, would require moving the platform to another location where there is more space.

I am happy to be included in future discussions regarding the Frog Pond and volunteer my services for that purpose. I have a long history of working with the community to preserve and promote the environment. I am an advocate for FORTAG and look forward to its implementation. However, I also have strong concerns regarding the significant impacts on the Frog Pond that have not been properly addressed in the EIR that would have to be mitigated before implementing the project.

IND 24.5

Very truly yours,

Edward B. Thornton, PhD, Distinguished Professor, Emeritus, Naval Postgraduate School

Letter IND 24

COMMENTER: Edward B. Thornton

DATE: January 1, 2020

Response IND 24.1

The commenter states that they are opposed to routing the trail through the Frog Pond, either via the proposed route along the southern end or the Alternative 4, Frog Pond Wetland Preserve Northerly Alignment route. The commenter describes concerns regarding bike use at the tranquil atmosphere of the Frog Pond.

Please refer to Topical Response A for a summary of impacts to the Frog Pond Wetland Preserve. As described therein, Alternative 5, South of Frog Pond Caltrans Right-of-Way Alignment, has been added to in response to comments on the Draft EIR. This new alternative would route the trail to the southern-most edge of the Frog Pond into the Caltrans SR 218 right-of-way. The full description and analysis of this alternative is provided in Section 6, *Alternatives*, of this Final EIR, along with two other alternatives that would completely avoid the Frog Pond (Alternative 1 and Alternative 2).

The commenter's preference for avoiding the Frog Pond is noted, and herewith shared with TAMC decision makers for consideration.

Response IND 24.2

The commenter states that they prefer Alternative 2, which eliminates the trail through the Frog Pond. The commenter additionally expresses concerns related to Alternative 4, stating that analysis of this alternative did not consider existing use and aesthetics of the Frog Pond.

The commenter's preference for Alternative 2 is noted and herewith shared with TAMC decision makers for consideration.

The analysis of Alternative 4 in Section 6, *Alternatives*, includes an assessment of impacts related to aesthetics: refer to the *Aesthetics* heading on page 6-31 of the Draft EIR. The present use of the Frog Pond is considered as part of the baseline environmental setting. The baseline is the physical conditions by which the lead agency determines whether an impact is significant (CEQA Guidelines Section 15125(a)). As such, this existing condition is considered throughout the EIR, for both the proposed project and Alternative 4.

Response IND 24.3

The commenter expresses the opinion that an eight-foot path in the Frog Pond would not be wide enough to accommodate both walkers and bikers, and references conversations in which TAMC stated there would be separate paths for bikes and walkers. The commenter states that a southerly route through the Frog Pond is unacceptable due to lack of space.

The proposed route through the Frog Pond would not have separate paths for pedestrians and bicyclists, but would limit the trail to 8-feet, as noted by the commenter, to minimize impacts within the Frog Pond Wetland Preserve. It is common for multi-use trails to mix user types on trails as narrow as four feet wide. Given the narrower width, permeable surface, and surrounding dense vegetation, bicycles are likely to naturally reduce speeds through this area. Bicyclists desiring a faster route would likely utilize existing bike lanes on SR 218. The commenter's preference for a

different alternative through the Frog Pond is noted and herewith shared with TAMC decision makers for consideration.

Refer also to Response IND 17.4 for a summary of alternatives that would either avoid Del Rey Oaks all together, or provide an alternative route through or around the Frog Pond Wetland Preserve.

Response IND 24.4

The commenter states that a northerly route through the Frog Pond could accommodate separate bike and walking paths, which should be separated by at least 20 feet. The commenter states that accommodating two separate trails would be difficult near the Frog Pond's redwood grove and birdwatching platform.

The commenter's opinions regarding a northerly route through the Frog Pond are noted. Alternative 4, Frog Pond Wetland Preserve Northerly Alignment, would follow the existing trail through the northern portion of the Frog Pond, but would not create two trails separated from each other by at least 20 feet, as the commenter suggests. Please refer to the new Alternative 5, as summarized in Response IND 24.1 and discussed in detail in Section 6, *Alternatives*, of this Final EIR. This alternative would create a new trail for both bicycles and pedestrians that would be separated from the existing trail along the southern portion of the Frog Pond Wetland Preserve.

Response IND 24.5

The commenter states that they are available for inclusion in future Frog Pond planning discussions.

The comment is noted. There will be additional opportunity for public involvement during the TAMC Board of Directors hearing to consider EIR certification and project approval.

Subject: FORTAG and Frog Pond

Letter IND 25

Gentlemen,

I am in favor of a reasonable and environmentally sensitive portion of the FORTAG along highway 218 through the Frog Pond.

IND 25.1

Seems to me the trail could be structured so that it passes immediately adjacent to the ditch that parallels highway 218 with a low berm to the east/north side of the trail with plants and trees to separate and screen it from the frog pond itself. This might entail relocating the existing decomposed granite pathway a few feet to into the existing wetlands but would help preserve the existing serenity and beauty of the Pond. Maybe that would help assuage some of the concerns that people have expressed?

Sincerely
Dennis Allion

Letter IND 25

COMMENTER: Dennis Allion

To: Rich Deal <rich@tamcmonterey.org>; payan@mprpd.org
Subject: Frog pond recreation vs bike path

Letter IND 26

Dear Rich and Rafael,

Please take note of my request that TAMC not place the bike path anywhere near the recreation area known as Frog Pond. I walk at the pond regularly and have looked at the maps posted on their website and frankly it's a terrible idea.

IND 26.1

There are other options and I would object to sacrificing the tranquility of the pond area to install a bike path (especially for hugely long period of time that was spent on the Fremont Street bike path. Which by the way is a waste of money- it is not utilized as it comes from no where and goes no where)

The impact that any construction either behind the backside of frog pond or worse yet running along the road that is not a desirable road for biking anyway. 218 is a horrific road for bicycles. And it is only going to get busier and less safe.

IND 26.2

I'm a rider and I have many friends that are riders and we avoid that 218 like the plague. If you're looking at connecting with the recreation trail there has to be a better way a more direct way that will satisfy the plan and be safer for the Bicyclist.

By the way how many people do you think this bike path will be servicing? I drive Fremont street all the time and so far it looks like that project was about \$1 million per bicyclist. How will there be a return on the investment and really who is this intending to serve? The Recreation trail is absolutely fantastic. The Fremont Street bike path is a nightmare and anywhere near 218 would be worse.

IND 26.3

Please confirm that you have received my comments that going anywhere near frog pond is going to be essentially "robbing Peter to pay Paul." Please leave the recreation area peaceful and put the bicyclist safely on one of the existing residential roads.

IND 26.4

Kindest regards,
Anne

COMMENTER: Anne Auburn

DATE: January 2, 2020

Response IND 26.1

The commenter describes their opposition to routing the trail through the Frog Pond, due to impacts to the Frog Pond's tranquility.

Please refer to Topical Response A for a summary of impacts to the Frog Pond Wetland Preserve. As described therein, Alternative 5, South of Frog Pond Caltrans Right-of-Way Alignment, has been added to in response to comments on the Draft EIR. This new alternative would route the trail to the southern-most edge of the Frog Pond into the Caltrans SR 218 right-of-way. The full description and analysis of this alternative is provided in Section 6, *Alternatives*, of this Final EIR, along with two other alternatives that would completely avoid the Frog Pond (Alternative 1 and Alternative 2).

The commenter's preference for avoiding the Frog Pond is noted and herewith shared with TAMC decision makers for consideration.

Response IND 26.2

The commenter states that a trail along SR 218 is not desirable as a bicycle route because of safety concerns.

The proposed project would not utilize SR 218. As discussed in Section 6, *Alternatives*, an alternative that would extend along SR 218 between Fremont Boulevard and the Frog Pond Wetland Preserve was considered, but ultimately rejected from detailed analysis in the EIR because such an alternative would not be feasible, would not meet the purpose and objectives of FORTAG, and would not include ATP funding.

The commenter's preference against the SR 218 alternative is noted and herewith shared with TAMC decision makers for consideration.

Response IND 26.3

The commenter asks how many people would use the trail. The commenter discusses a separate project.

As stated on page 2-1 of the Draft EIR, "the estimated number of trail users would be between 1,000 and 3,000 daily, with the highest usage occurring on the CSUMB campus and near the existing Monterey Bay Coastal Recreation Trail."

Because the remainder of the comment does not pertain to the adequacy of the FORTAG EIR or CEQA process, no further response is required.

Response IND 26.4

The commenter reiterates their opposition to routing the trail through the Frog Pond.

The comment is noted and herewith shared with TAMC decision makers for consideration.

Subject: FORTAG EIR Comment

Rich,

After seeing another round of NIMBYs on Nextdoor getting riled up about this I figured its worth sending an email to help balance things out.

IND 28.1

While I haven't been able to exhaustively review the EIR (no doubt like every other commenter) I was able to give it a read through. In general it seems like a well thought out plan to expand our non-automotive transportation and recreational infrastructure which is severely lacking at the moment.

Having read the public comments made thus far it seems clear the objections regarding the Frog Pond section have far more to do with the prejudices of the people making the comments than the facts of the situation.

IND 28.2

In short, there will always be obstructionist armchair experts with nothing better to do than making their uninformed opinions as widely heard as possible. I urge you to do what is best for the community at large and build the most usable network possible.

Kind Regards,
Brian Cade

Letter IND 28

COMMENTER: Brian Cade

DATE: January 2, 2020

Response IND 28.1

The commenter states that the project would expand non-automotive transportation and recreational infrastructure.

The commenter is correct that FORTAG would expand opportunities for active transportation in Monterey County, consistent with project objective one to have FORTAG function as an active transportation artery for commuting and recreation, providing a safe, accessible, and separated alternative to motorized travel. The comment is noted.

Response IND 28.2

The commenter expresses the opinion that opposition to the project is based on prejudices. The commenter encourages decision making that benefits the transportation network and the broader community.

The comment is noted and herewith shared with TAMC decision makers for consideration.

Subject: Frog Pond/ FORTAG Comment

Letter IND 31

Directors and Rafael,

I sent the following to TAMC as commentary on the Frog Pond EIR. I hope you will see from the commentary made by others at the various meetings about this issue that the community strongly feels that allowing bikes in the Frog Pond on ANY route would serve the residents of the pond and the users of the pond very poorly, and that you should direct TAMC to find an acceptable workaround:

IND 31.1

I have attended several FORTAG meetings and both commented and listened there, noting the extent of the proposal and the alternative proposals, also noting the opinions of those in favor and those opposed to the various aspects of the plan. My main concern is the relatively small, but disproportionately important Frog Pond Wetland Preserve.

Besides attending various forums, I have published info about the proposal on the "Nextdoor," blog, which hosted a fairly lively discussion of the proposal.

From all of those discussions, most of the trail is without controversy. The two hot spots are as indicated in the EIR, the streets of Del Rey Oaks and the Frog Pond Wetland Preserve, also in Del Rey Oaks. Most of the speakers at those meetings and in other discussions were opponents of the two alternatives through the Frog Pond, and very few of the public supported either alternative. The proponents were mainly the promoters/originators of FORTAG, and the TAMC staff.

From all this I would like to summarize what is important to the public about the Frog Pond part of the proposal.

- The Frog Pond is home to many sensitive species. Walkers at current use levels don't affect them much, but bikes will. Birds, for example are known to shy from bikes. That means birds will retreat from the trails. This point has been made by prominent, expert birders.
- The habitat along most of the trails is highly desirable for resident and migratory birds, as a food source, and cover. Bikes will tend to drive birds away from such cover and food.
- Especially sensitive is the willow/creekside dogwood habitat.

IND 31.2

- Other animals will be harmed. The namesake frogs, for example, hop across the trails. Human walkers stop and walk around them; bikes will not. If bikes were to be permitted, we could consider renaming the place the "Squished Frog Wetland Preserve." ↑
- Most of the current human users of the Frog Pond are seeking the tranquility that the Preserve brings; bikes will severely diminish that quality. IND 31.3
- Most of the current human users are hikers, birders, runners, those on family outings, and--in great numbers--mothers with toddlers. Also seen are many educational outings from schools and other programs, who are looking closely at, and interacting with, the habitat. The pleasure in all these activities will be severely diminished by the introduction of speeding bikes. Everyone including students must then become wary and watchful, protective.
- Neither of the two proposals in the EIR is acceptable. No route THROUGH the Frog Pond is acceptable. IND 31.4
- The EIR neglects a third proposal, that of a boardwalk on 218 and on Gen Jim Moore. IND 31.5
- The best possible alternative from a Frog Pond protection perspective is to choose the route along the PG&E easement on Plumas, and out through Fort Ord, passing by Del Rey Oaks entirely.
- The two underpasses/bridges will be very disruptive, requiring lengthy construction, and disrupting the tranquility of the pond for humans and animals for a long time. IND 31.6
- Not mentioned is that a significant component of modern bicycling is electric bicycles, which are hard to distinguish from manual bikes, and which can reach and sustain high speeds. These will comprise a portion of bike trail users, and those will amplify the negative impact of the bike trail in sensitive environments such as the Frog Pond. IND 31.7

Sincerely,

Don Gruber
Del Rey Oaks resident,
and daily Frog Pond user.

831-238-2787

Letter IND 31

COMMENTER: Don Gruber

DATE: January 2, 2020

Response IND 31.1

The commenter describes the opposition to the Del Rey Oaks portions of the trail among local residents. The commenter states that allowing bikes within the Frog Pond Wetland Preserve would poorly serve the people that live near the park and visit the park. The commenter states that the two controversial portions of the proposed trail are the streets of Del Rey Oaks and the Frog Pond.

The comment is noted. Please refer to Response IND 17.4 for a summary of alternatives that would either avoid Del Rey Oaks all together, or provide an alternative route through or around the Frog Pond Wetland Preserve.

Comments submitted by the commenter are also included as Letter IND 55 and comment IND 56.4. Refer also to those comments for additional responses to the commenter.

Response IND 31.2

The commenter describes the sensitive habitat and wildlife at the Frog Pond, including birds and frogs, and the potential for the project to impact biological resources.

Please refer to Topical Response A for a summary of biological resources impacts in the Frog Pond. As described therein, impacts to biological resources within the Frog Pond Wetland Preserve would be less than significant with mitigation.

Regarding potential trampling of frogs by bicycles, only bullfrogs and tree frogs (*Pseudacris sierra*) occur within the Frog Pond Wetland Preserve. Bullfrogs are an invasive species and tree frogs are not a sensitive species and are considered secure-common; widespread and abundant (G5 SNR). Bicycle speeds would be relatively low through the Frog Pond because of the reduced trail width, which would reduce the likelihood of bicycle strikes on wildlife. In addition, most wildlife movement occurs late night to early morning and amphibians move more frequently during wet weather. Bicycle traffic would be at its lowest during these times of peak wildlife movement (i.e., at night or during rain events), further minimizing the potential for bicycle strikes on wildlife. Therefore, FORTAG would result in minimal bicycles strikes to wildlife and there would not be a significant impact to sensitive wildlife species, including to species within the Frog Pond Wetland Preserve.

Response IND 31.3

The commenter describes the current use of the Frog Pond Wetland Preserve by hikers, birdwatchers, and families. The commenter states that bikes would diminish enjoyment of the current uses, and that routing the trail through the Frog Pond is unacceptable.

Please refer to Topical Response A for a summary of impacts to the Frog Pond Wetland Preserve, including the tranquility and human enjoyment of the Frog Pond, and a discussion of alternatives that would avoid the Frog Pond. These alternatives are further described and analyzed in Section 6, *Alternatives*.

The commenter's preference for an alternative that avoids the Frog Pond is noted and herewith shared with TAMC decision makers for their consideration.

Response IND 31.4

The commenter states that the EIR does not discuss an alternative routing the trail on a boardwalk along SR 218 and General Jim Moore Boulevard.

Refer to Response LA 2.1 As noted therein, a new alternative – Alternative 5, South of Frog Pond Caltrans Right-of-Way Alignment – has been added to the EIR in response to several comments suggesting such an alternative. Alternative 5 would route the trail south around, rather than through, the Frog Pond, utilizing a boardwalk over the drainage ditch that runs parallel to SR 218. Refer to Section 6, *Alternatives*, for a full discussion and analysis of this alternative.

Response IND 31.5

The commenter states that routing the trail along the PG&E easement on Plumas Avenue would be the best option regarding Frog Pond preservation.

The commenter's suggestion is similar to Alternative 2, which would eliminate the Canyon Del Rey/SR 218 segment and replace the segment with an alignment that would follow the PG&E easement on Plumas Avenue in the City of Seaside from Fremont Boulevard on the west to General Jim Moore Boulevard on the east. For additional detail on this alternative alignment and the associated impacts, please refer to Section 6, *Alternatives*.

The commenter's preference for this alternative is noted and herewith shared with TAMC decision makers for consideration.

Response IND 31.6

The commenter states that construction of two underpasses would be disruptive to the Frog Pond for a long period of time.

Based on the comments in this letter, it is assumed the commenter is referring to the proposed undercrossings of SR 218/Canyon del Rey Boulevard and General Jim Moore Boulevard (on either side of the Frog Pond Wetland Preserve).

Construction-related impacts of FORTAG, including sections in and near the Frog Pond Wetland Preserve, are analyzed throughout the Draft EIR. While construction activities would result in temporary impacts related to noise, traffic, and biological resources, impacts were determined to be less than significant or less than significant with mitigation.

As described in Section 4.4, *Biological Resources*, of the EIR, the project does have the potential to affect special status species and riparian habitat. Effects would generally be more acute during the project's construction phase. The EIR includes numerous mitigation measures addressing biological resources, most of which concern project construction activities. All impacts on biological resources were determined to be less than significant or less than significant with mitigation incorporated. Refer to Section 4.4 of the EIR for further discussion of biological resources and refer to Master Response A for further discussion of project effects at the Frog Pond.

Response IND 31.7

The commenter states that some of the bikes used in the Frog Pond would be electric bikes, which reach high speeds and could amplify impacts on the habitat.

As noted in Section 2.5.2, *Electric Bicycles*, of the EIR, Class 1 and Class 2 e-bikes are legal on any paved surface that a regular bike is allowed to operate. The trail through the Frog Pond Wetland

Preserve would be composed of a stable, permeable surface in lieu of impermeable pavement. If this surface is unpaved, the implementing entity would have the option of prohibiting electric bikes or imposing a speed limit that would restrict the use of electric bike motors. Furthermore, the narrower trail width in this area would result in reduced speeds by bicyclists.

The commenter's concerns regarding e-bikes are noted and herewith shared with TAMC decision makers for consideration.

Subject: Frog Pond in Del Rey Oaks

Letter IND 32

Rich,

I'm a resident of Del Rey Oaks and have some concerns regarding the proposal of a bike access through the frog pond. We have lived in Del Rey Oaks for over 40 years and have seen many changes. This access to the frog pond would deviate the natural habitat that has existed for us all to enjoy. I can't imagine why you couldn't do something outside the area. We walk our dogs and it's a peaceful haven for many people. I'm sure you have noticed the new bike trail down Fremont Boulevard and I rarely see anyone use it and the city spent millions. A bike trail in the Frog Pond is harmful, no matter what route it takes, and that only acceptable route is outside the Frog Pond. Thank you for consideration in this matter.

IND 32.1

Sincerely,

Karen Johnson

Letter IND 32

COMMENTER: Karen Johnson

DATE: January 2, 2020

Response IND 32.1

The commenter states that they are a Del Rey Oaks resident and have concerns about the proposed bike route through the Frog Pond. The commenter states that the trail would be harmful to the Frog Pond, and recommends utilizing a different area.

Refer to Section 6, *Alternatives*, for descriptions of project alternatives, including Alternatives 1, 2, and 5, all of which would avoid or reduce intrusion into the Frog Pond. The commenter's preference for an alternative that avoids the Frog Pond is noted and herewith shared with TAMC decision makers for their consideration.

Subject: Frog Pond EIR

Dear Rich

I'm writing to you because of the proposed bike path to be put around the Frog Pond. I've been walking my dogs at the Frog Pond for 23years and consider it to be my spiritual oasis as well as important place to observe the varied plant and wildlife found there. Not only that but its a place for children to come and play and learn about their natural environment. Having bikes flying through could ruin all of this. Please don't destroy this beautiful pond.

IND 33.1

Sincerely,
Franci Kennedy
Del Rey Oaks

Letter IND 33

COMMENTER: Franci Kennedy

DATE: January 2, 2020

Response IND 33.1

The commenter describes the Frog Pond as a spiritual oasis and a place for appreciating nature, and states that allowing bikes would ruin these benefits.

Please refer to Topical Response A for a summary of impacts in the Frog Pond Wetland Preserve, including the tranquility and human enjoyment of the Frog Pond, and a discussion of alternatives that would avoid the Frog Pond.

The commenter's preference for an alternative that avoids the Frog Pond Wetland Preserve is noted and herewith shared with TAMC decision makers for consideration.

Subject: FORTAG proposal through Frog Pond Wetlands

Good Evening Mr Deal,

I am a lifelong resident of Monterey County and an avid cyclist and write to you in support of the FORTAG proposal through Frog Pond Wetlands.

IND 34.1

The proposal presents minimal invasive additions to the area. The surface of the trail in the area does not include any concrete or asphalt which may ease some of the objections to wetland preserve.

IND 34.2

The need for safe travel routes to get bicycles and pedestrians away from vehicles is a positive for myself and all other recreational users of Monterey County. In addition to recreational opportunities, this could help commuters get out of their vehicles and onto bicycles and reduce the number of vehicles that use area roads daily.

The FORTAG project has been in the works for several years and I would like to see project come to completion sooner than later.

Thank you for your consideration.

Sincerely,

Nick Madronio

Letter IND 34

COMMENTER: Nick Madronio

DATE: January 2, 2020

Response IND 34.1

The commenter states that they are a Monterey County resident and a cyclist, and that they support the proposal to add bike access at the Frog Pond.

The commenter's support for the project is noted and herewith shared with TAMC decision makers for their consideration.

Response IND 34.1

The commenter states that the project would be minimally invasive at the Frog Pond. The commenter describes the benefits of alternative transportation facilities.

The comment is noted. Because the comment does not pertain to the adequacy of the EIR or CEQA process, no further response is required.

Subject: No Bike Path Through Frog Pond!!

Letter IND 35

Dear Mr. Payan and Mr. Deal:

I have been a resident of Del Rey Oaks for 40 years. I only discovered the wonderful Frog Pond about 25 years ago when my children were small. This is an amazing oasis, a paradise of peace. There is no room for a bike path there. Don't destroy the wildness of our hidden spot by having all us pedestrians dodging bikes. The only spot for a bike path is OUTSIDE of the Frog Pond. I can't emphasize enough how the whole character of the Frog Pond would be changed, lost if bikes were given top priority over hikers. We don't need more pavement. We need woods and open spaces to ponder beauty. Bikes belong on Hwy 218, not here. Please do not force this on Del Rey Oaks residents.

Letter IND 35

COMMENTER: Elaine Miller

DATE: January 2, 2020

Response IND 35.1

The commenter describes the Frog Pond as a paradise of peace and requests that bike access not be allowed there. The commenter states that the only place for a bike path is outside of the Frog Pond Wetland Preserve.

Please refer to Topical Response A for a description of impacts in the Frog Pond Wetland Preserve, including those related to enjoyment and tranquility, and a discussion of alternatives that would avoid the Frog Pond.

The commenter's preference for an alternative that avoids the Frog Pond Wetland Preserve is noted and herewith shared with TAMC decision makers for consideration.

Response IND 35.1

The commenter describes the importance of preserving open space. The commenter notes a preference for bike use on SR 218, rather than through the Frog Pond.

The commenter's preference for persevering open space is noted.

Regarding routing bikes on SR 218, as discussed in Section 6, *Alternatives*, an alternative that would extend along SR 218 between Fremont Boulevard and the Frog Pond Wetland Preserve was considered, but ultimately rejected from detailed analysis in the EIR because such an alternative would not be feasible, would not meet the purpose and objectives of FORTAG, and would not include ATP funding.

Refer also to Response LA 2.1, which introduces a new Alternative 5, South of Frog Pond Caltrans Right-of-Way Alignment, which would route the trail to the southern-most edge of the Frog Pond into the Caltrans SR 218 right-of-way, parallel to (but not on) SR 218. The full description and analysis of this alternative is provided in Section 6, *Alternatives*, of this Final EIR.

Cc: Rich Deal <rich@tamcmonterey.org>
Subject: Frog Pond

Dear Mr. Payan,

I am writing in regards to the plan to route the FORTAG trail through the Frog Pond in Del Rey Oaks. I attended the meeting last month in Carmel Valley and was encouraged at the response from the board that seemed to take our concerns to heart. I have also attended several meetings over the last 2 years in Del Rey Oaks and Seaside regarding the proposed FORTAG trail through DRO. I have spoken with Mr. Diehl about our concerns.

IND 37.1

I know you have heard from many residents of Del Rey Oaks who, like myself, treasure the tranquility and natural beauty of this oasis in our city. I am concerned that inviting more recreation into this area will endanger the very nature of this unique place. There are many species of animal and birds who depend on this area for their very existence. To invite more people on bikes, electric bikes, skateboards, etc. to this area is asking for trouble. I fear that this will become another example of "loving it to death".

Even though the Frog Pond is in my back yard, this is not a case of NIMBY. I would feel the same if I lived elsewhere. However, for those of us whose homes back up to the Frog Pond, there is also the concern of safety, both from access to our properties from the proposed path, to fire from increased exposure to recreationalists and transients who would have easier access.

IND 37.2

I am not opposed to the FORTAG plan, but feel that both plans to disrupt the Frog Pond are unacceptable propositions.

Thank you for taking my comments into consideration.

Sincerely,
Jeri Vanderzwaan

Letter IND 37

COMMENTER: Jeri Vanderzwaan

DATE: January 2, 2020

Response IND 37.1

The commenter describes the current environmental and public use benefits provided by the Frog Pond. The commenter expresses concern that inviting additional recreational use to the Frog Pond would threaten these benefits.

Please refer to Topical Response A for a summary of impacts to the Frog Pond Wetland Preserve. As described therein, all impacts within the Frog Pond Wetland Preserve would be less than significant or less than significant with mitigation. In addition, the project would improve access to the Frog Pond Wetland Preserve, but would not change the use of the park.

The commenter's concerns are noted and herewith shared with TAMC decision makers for consideration.

Response IND 37.2

The commenter describes potential fire and safety hazards that could result from adding recreational and transient visitors to the Frog Pond. The commenter states that they are not opposed to the FORTAG project, but that disrupting the Frog Pond is unacceptable.

Impacts related to fire hazards are discussed in Section 4.17, *Wildfire*, of the Draft EIR. As shown in Figure 4.17-1 on page 4.17-4 of the Draft EIR, the Frog Pond Wetland Preserve is located in a Very High Fire Hazard Severity Zone. As discussed under Impact WFR-2, FORTAG would not exacerbate wildfire risks with adherence to applicable firebreak maintenance standards. In addition, the Frog Pond is readily accessible by emergency and first responders through existing road networks. As described in Topical Response A, safety for residents around the Frog Pond Wetland Preserve would not decrease as a result of the FORTAG project.

The commenter's preference for an alternative that would avoid the Frog Pond Wetland Preserve is noted and hereby shared with TAMC decision makers for consideration.

From: nbeety@netzero.net <nbeety@netzero.net>
Sent: Friday, January 03, 2020 1:30 PM
To: Rich Deal <rich@tamcmonterey.org>
Cc: nbeety@netzero.net
Subject: Draft EIR comments, Ft. Ord Regional Trail Greenway

Comments on TAMC Fort Ord Regional Trail Greenway:

Bikes are incompatible with the Frog Pond Wetland Preserve, its environment and the frogs, salamanders and other wildlife that live there. For that reason, I oppose any development of the Greenway in, near, or around the Frog Pond Preserve in Del Rey Oaks.

IND 39.1

The goal of the proposed bikeway is public transportation. Public transportation focuses on getting people as quickly and easily as possible to their destinations. Further, in this case, the bikeway encourages them to use their bikes instead their autos because the trails provide them quick and easy access to work and home. TAMC is working hard to sell people on using alternate transportation.

IND 39.2

That is a completely different goal than the goal of the Preserve

Just as an automobile road through the Preserve would be extraordinarily incompatible and at cross purposes, so a bike transportation corridor to and from work is not compatible with the sanctuary of the Preserve. Bicycles are in some ways no different than autos in their use, and they can cause additional problems..

Long term experience with the coastal Recreation Trail has shown that many bicyclers are oblivious to human pedestrian safety. In fact, it is common to see bicyclers use the Rec Trail in a dangerous manner.

IND 39.3

TAMC must expect that a bike transportation corridor trail, as opposed to a recreation trail, with bikers moving at speed, would experience even less caution for human pedestrians and have more accidents. Based on that, bikers can hardly be expected to focus on wildlife safety, particularly for small creatures that they can barely see as they speed past. Bicycles can go as fast as automobiles, especially downhill,

Bikers have caused trail damage and build illegal trails in the county on public land. If this corridor is built on new unpaved land, TAMC must plan for and prevent, as much as possible, off-road and new trail formation by users, including "short cuts." These will take place and will further degrade and erode the land, with environmental impacts to the Preserve and other areas. What human users can do, they will do, regardless of the impacts.

IND 39.4

Signs do not prevent lack of caution or off-road trails.

Any bike transportation corridor must be sited to prevent run-off and erosion into the Preserve or adjacent wetlands due to intended and unintended use. This probably means using public roads to the greatest extent possible.

IND 39.5

The Preserve is set aside for the amphibians and the other creatures that live there. It is a rare carve-out for wildlife, and that is its fundamental purpose which must be protected. It is already very vulnerable due to its location in a heavily impacted area adjacent to the very busy Canyon Del Rey Boulevard and residential housing. Those who currently go there accept the limitations of access due to its function. Bikes are an inappropriate use in that environment.

IND 39.6

It is essential that any bike corridor must completely bypass the Preserve and any uphill or downhill areas that would impact the Preserve or make it easier to access the Preserve.

Sincerely,

Nina Beety
277 Mar Vista Dr.
Monterey, CA 93940

Letter IND 39

COMMENTER: Nina Beety

DATE: January 3, 2020

Response IND 39.1

The commenter states that bikes are incompatible with the Frog Pond and its wildlife, and that they oppose development in or near Frog Pond.

Please refer to Topical Response A for a summary of impacts to biological resources in the Frog Pond Wetland Preserve.

The commenter's opposition to a trail through the Frog Pond Wetland Preserve is noted and hereby shared with TAMC decision makers for consideration.

Response IND 39.2

The commenter states that TAMC's alternative transportation goals conflict with preservation of the Frog Pond. The commenter states that bicycles cause problems similarly to automobiles.

Alternative transportation provides numerous benefits associated with reducing motor vehicle traffic, such as traffic congestion reduction, greenhouse gas emission reduction, and noise reduction. In addition to adding an active transportation artery, the project's objectives include connection of people and communities to open space and utilization of existing built trails. For a full list of project objectives, refer to Section 2.3 in Section 2, *Project Description*.

The project would improve the region's alternative transportation network while providing new and improved opportunities to access nature, including the Frog Pond. For further discussion of impacts at the Frog Pond, refer to Topical Response A. As described therein, the Frog Pond Wetland Preserve is a public park. Improving access to the park is consistent with the goals of MPRPD. Therefore, the FORTAG objective of improving alternative transportation facilities is not inconsistent with MPRPD's goals for the Frog Pond.

Response IND 39.3

The commenter states that the Coastal Rec Trail has shown that many cyclists move at high speeds and are a hazard to pedestrian safety and wildlife.

The commenter's concerns regarding hazards from bike use are noted. Please refer to Response IND 23.1 for a discussion of direct impacts by bicycles within the Frog Pond Wetland Preserve. As described therein, the reduced trail width through the park would reduce bicycle speeds. For further discussion of direct impacts to wildlife by bicycles, refer to Response 31.2. As described therein, minimal strikes on wildlife by bicycles are anticipated, and there would not be a significant impact to sensitive species. For further discussion of impacts related to wildlife and human enjoyment at the Frog Pond, refer to Topical Response A.

Response IND 39.4

The commenter states that TAMC must address the fact that cyclists damage trails and build illegal trails that damage the land. The commenter states that signage does not prevent this behavior.

The commenter's concern regarding cyclists forming illegal trails and disregarding signs is noted. Refer to Topical Response A for a discussion of off-trail activity. As described therein, the dense vegetation surrounding the trail would discourage off-trail activity. Refer also to Topical Response B for a discussion of the MA and SA's, which would identify responsibilities for the maintenance and rule enforcement of the trail.

Response IND 39.5

The commenter states that trail siting should utilize existing public roads in order to prevent run-off and erosion into the Frog Pond.

As described in Section 4.10, *Hydrology and Water Quality*, the project would be subject to regulations required by the State Water Resources Control Board, the Construction Best Management Practices Handbook of Monterey County, and the Monterey Peninsula Regional Stormwater Resource Plan. Implementation of best management practices based on applicable regulations would reduce the potential for eroded soil and waterbody contamination. Therefore, impacts related to erosion were determined to be less than significant without mitigation.

Regarding utilization of existing public roads, note that Alternative 2, Increased Use of Existing Roadways, would avoid the Frog Pond by utilizing public roadways and avoiding Del Rey Oaks completely.

Response IND 39.6

The commenter states that the purpose of the Frog Pond is to provide wildlife habitat, and that bike use is inappropriate in that setting. The commenter states that any new trail should bypass the Frog Pond as well as areas that could lead to easier access to the Frog Pond.

Please refer to Topical Response A for a discussion of impacts to the Frog Pond Wetland Preserve. As described therein, impacts related to wildlife habitat as a result of the project would be less than significant with mitigation. In addition, despite its name, the Frog Pond is not a reserve that prohibits public access, but a public park with a trail. FORTAG would make the Frog Pond accessible to more people as part of a larger trail network and therefore be consistent with the vision of the MPRPD to increase recreational opportunities. The commenter's preference for an alternative that would avoid the Frog Pond Wetland Preserve is noted and hereby shared with TAMC decision makers for consideration.

Subject: FORTAG draft EIR

Letter IND 40

Transportation Agency for Monterey County
Attn: Rich Deal, Principal Engineer
[55-B Plaza Circle](#)
[Salinas, CA 93901](#)

Re: FORTAG Draft EIR

Dear Rich Deal:

I want to comment specifically on the part of the plan that puts the bike trail through the Frog Pond Wetland Preserve. I don't think it's a good idea or a best use of the Preserve. I visit the Frog Pond frequently to do surveys of the bird life there. I teach a birdwatching class through the Pacific Grove Adult School and take my students there on field trips seasonally. I also lead public tours there through the Monterey Audubon Society.

IND 40.1

It is a special piece of wetland that is small and intimate. The trails are narrow and the habitat is dense. Most of the time we have to walk single file. I tell my students that this visit is more about ear training; we learn to listen to the birds because we might not always see them.

IND 40.2

It was explained to me during a tour by the planners Fred Watson and Scott Waltz that the purpose of bringing the bike trail into the Preserve was to invite people to experience this special place that they may not have known existed. However, the 8-foot wide bike trail would actually remove the specialized habitat and create a transportation corridor. Gone would be the ability to walk peacefully, to stop and observe nature, to take photographs. Furthermore, the reduction of the habitat and the increased traffic would be harmful to the breeding success of the wildlife that lives there, to the birds that stopover in spring and fall, or winter there.

Members of my tour group and I suggested at the time that we would like to see the trail go around the preserve and not through it. If one wanted to actually go in to see the Frog Pond, there could be bike stands available outside; only foot traffic would be permitted inside. This option is the best option.

IND 40.3

Thank you for your consideration,

Rita Carratello
282 Grove Acre Ave.
Pacific Grove CA 93950

Letter IND 40

COMMENTER: Rita Carratello

DATE: January 3, 2020

Response IND 40.1

The commenter describes their experiences with birdwatching and bird surveying at the Frog Pond, and states that a bike trail is not a good use of the Frog Pond.

Please refer to Topical Response A for a summary of biological resources impacts in the Frog Pond, including birds. The commenter's opinions regarding a trail through the Frog Pond Wetland Preserve are noted and herewith shared with TAMC decision makers for consideration.

Response IND 40.2

The commenter states that the project would remove the special wildlife habitat at the Frog Pond. The commenter states that the project would impact both public enjoyment and the breeding success of wildlife species.

Please refer to Topical Response A for a summary of impacts to the Frog Pond Wetland Preserve, including those related to biological resources, and a discussion of enjoyment and tranquility in the Frog Pond.

Response IND 40.3

The commenter recommends that the trail should go around, rather than through the Frog Pond, with pedestrian-only access within the Frog Pond.

The commenter's preference for an alternative that would not allow bike access within the Frog Pond Wetland Preserve is noted and herewith shared with TAMC decision makers for consideration.

Subject: FORTAG Draft EIR

Letter IND 41

Transportation Agency for Monterey County
Attn: Rich Deal, Principal Engineer
55-B Plaza Circle
Salinas, CA 93901

Re: FORTAG Draft EIR

Dear Rich Deal,

I'm a resident of Pacific Grove, and I frequent the local, regional, state, and national parks we are so blessed with in Monterey County. I've waded through the FORTAG Draft EIR, and I'm very concerned about the proposed bike route through the Frog Pond Wetland Preserve. The EIR is quite cavalier in its disregard of the fragility of the Preserve's habitat.

IND 41.1

The Frog Pond Wetland is a unique natural area, with an intimate trail around the Preserve. While only about 3/4 of a mile long, the trail passes through an amazing variety of habitats—riparian/willow, grassland, oak woodland, pines, and a small "grove" of magnificent redwood trees—that support a marvelous array of wildlife. And the Preserve is accessible to all ages. I've visited the Preserve with toddlers and nonagenarians and all ages in between. The bird life and other wildlife are enchanting. The preserve is tranquil, a place for walking or jogging, and especially for listening and watching. A bicycle corridor is not a compatible use—a speed limit that would be necessary in order to assure a respectful pace could not be enforced.

IND 41.2

Widening the trail to accommodate bicycle touring and commuting would be destructive to the habitat and the wildlife it supports and hazardous for pedestrians. Eliminating the alternative of "no bikes" in the Preserve makes no sense. The health and integrity of the Preserve need to be maintained and enhanced. The north and south alternatives for the trail are both invasive. Wetlands are threatened habitats, and the Frog Pond Wetland is a treasure in the midst of an urban area contributing significantly to the biodiversity of the area and to the physical and mental health of residents and visitors. It needs to be preserved to support resident and migratory species and nature discovery and study. Please align the trail to avoid the Preserve entirely.

IND 41.3

Sincerely,
Lisa Ciani
220 Walnut St
Pacific Grove, CA 93950

Letter IND 41

COMMENTER: Lisa Ciani

DATE: January 3, 2020

Response IND 41.1

The commenter states that they are concerned with the proposed trail running through the Frog Pond. The commenter states that the EIR is cavalier regarding the fragility of the Frog Pond.

Please refer to Topical Response A. As noted therein, impacts to biological resources in the Frog Pond Wetland Preserve, including sensitive wildlife species and habitat, would be less than significant with implementation of mitigation measures to avoid, restore, and preserve biological resources. In addition to mitigation measures required in the Draft EIR, there are several trail design features specific to the Frog Pond Wetland Preserve, including constructing a narrower trail through the preserve, that would minimize impacts to biological resources.

Because the comment does not provide specific critiques of the EIR analysis of biological resources, no further response is provided.

Response IND 41.2

The commenter describes the special atmosphere and wildlife at the Frog Pond, and states that bike use is not compatible with the Frog Pond.

The commenter's concerns regarding hazards from bike use are noted. Please refer to Response IND 23.1 for a discussion of bike use at the Frog Pond. Refer also to Topical Response A. As described therein, the Frog Pond is a public park, and the project would improve access to the park. The project's objectives include connection of people and communities to open space and recreational activities. The commenter's preference against allowing bikes in the Frog Pond Wetland Preserve is noted and herewith shared with TAMC decision makers for consideration.

Response IND 41.3

The commenter states that a bike path through the Frog Pond would be destructive to wildlife and hazardous to pedestrians. The commenter expresses a preference for an alternative that would not allow bikes in the Frog Pond.

Please refer to Response IND 41.1 and Topical Response A for a discussion of impacts related to habitat and wildlife within the Frog Pond Wetland Preserve. Pedestrian hazards from bicycles are discussed in Draft EIR Section 4.14, *Transportation*. As discussed under Impact T-3 therein, FORTAG would not substantially increase hazards due to incompatible uses. The trail segments would be wide enough to accommodate both pedestrians and bicyclists simultaneously. It is common for multi-use trails to mix user types on trails as narrow as four feet wide. Given the narrower width, permeable surface, and surrounding dense vegetation of the trail through the Frog Pond, bicycles are likely to naturally reduce speeds through this area. Bicyclists desiring a faster route would likely utilize existing bike lanes on SR 218.

The commenter's preference for an alternative that would not allow bikes in the Frog Pond Wetland Preserve is noted and herewith shared with TAMC decision makers for consideration. Several such alternatives are discussed in Section 6, *Alternatives*.

Letter IND 42

Rich Deal
Principal Engineer
Transportation Agency for Monterey County
55-B Plaza Circle
Salinas, CA 93901

Dear Rich Deal:

This letter is in response to the Draft Environmental Impact Report (Draft EIR) for the proposed Fort Ord Regional Trail and Greenway (FORTAG) project that was made available on November 7, 2019. My concerns

IND 42.1

I was disappointed to see that my letter from June 27, 2019, which addressed 8 different points (each with a few subpoints) was reduced to 2 points concerning homelessness and recommendation to route FORTAG along Highway 218. See page 67 of the DEIR, Table 1-1. One could mistakenly deduce from the summary in Table 1-1 that I only addressed those 2 items in my letters to TAMC. My letter addressed the veracity of FORTAG's mission in relation to the design, utility, usefulness, and impact the project would have on the environment and community of Del Rey Oaks.

I concur with all of the points made by Ms. C. Hickey in her response to the Draft EIR. I share and echo each of her concerns about increased vehicular traffic, negative impacts to the residential community surrounding Angelus Way and negative ecological impacts on the Frog Pond Wetland Preserve.

IND 42.2

During my review of the Draft EIR, I see that many of issues projected to have an impact on the community or environment would be lessened "with mitigation," but these mitigation measures often only address aesthetic issues like using light colors and textures for amenities or building fencing during construction to protect environmentally sensitive areas, but do not address long-term effects of FORTAG on the community. FORTAG and TAMC have made it clear that maintenance, law enforcement and use of the trail would fall upon the city in which that portion of the trail exists. The Draft EIR

IND 42.3

fails to address the long-term impacts of increased traffic (pedestrian, bicycle and vehicle), protection of plant and animal life, and net gain/sustainability of the trail when compared to the mitigation measures and construction required for those measures.

While there was a summary of Public Safety agencies and existing services in Section 4.13, the Draft EIR failed to address the increased use or impact FORTAG would have on these agencies and public services and how these agencies might respond to areas of the trail in a timely manner based on the terrain and mitigation measures implemented in those areas.

IND 42.4

I disagree with the assessment and subsequent rejection of alternative routes of the project as summarized in Table 6-1. I think the assessment is subjective and based on money and convenience. A transportation artery that creates economic benefits for retail, hospitality and competitive events should not be routed down a residential street. There is nothing to stop a person from accessing Del Rey Park, Work Memorial Park or the Frog Pond from SR 218.

IND 42.5

I would like to see alternatives to the proposed trail that do not go through residential neighborhoods or the Frog Pond. Most of the proposed trail will be in non-residential neighborhoods which will have a disproportionate impact on the residential communities that do host the trail. Those of us who live in the established Angelus Way neighborhood should not be forced to host a trail for the entirety of the Monterey Peninsula.

IND 42.6

The Draft EIR states that FORTAG would result in significant impacts for aesthetics, agricultural and forestry resources, air quality, biological resources, cultural resources, geology and soils, hazards and hazardous materials, land use and planning, noise, public safety and services, tribal cultural resources, and wildfire, but that these impacts are mitigatable. I do not see these mitigations as worth the cost or see the benefit for the project in the long term due to its impact on the environment and community as a whole. Other alternatives should be explored as the current project has the potential create irreversible negative impacts to the people, plants, and animals that live in the community. If other alternatives cannot be identified, I recommend “no project.”

IND 42.7

Please confirm receipt of this communication.

Sincerely,

Roberta M. Freeman

Letter IND 42

COMMENTER: Roberta M. Freeman

DATE: January 3, 2020

Response IND 42.1

The commenter states that they submitted comments on the project prior to preparation of the Draft EIR, but that not all of their comments were noted in the EIR.

As shown in Table 1-1 on page 1-8 of the Draft EIR, comments from Roberta Freeman were received during the Notice of Preparation public comment period and addressed in Section 4.13, *Public Safety and Services*, and Section 6, *Alternatives*, of the Draft EIR. The commenter's letter is included in Appendix A, Notice of Preparation, of the Draft EIR. The scoping process that collects comments on a project prior to preparation of an EIR is utilized to determine the focus and content of the EIR analysis. Table 1-1 summarizes comments on the project, but does not include a summary of each individual comment received, particularly when a similar comment has already been noted, or if a comment does not pertain to the environmental analysis or the CEQA process.

Response IND 42.2

The commenter states that they concur with the points made by another commenter regarding traffic, impacts to residents, and ecological impacts to the Frog Pond.

The referenced letter is included herein as Letter IND 44. Please refer to Responses 44.1 through 44.27 for responses to individual comments in that letter.

Response IND 42.3

The commenter states that mitigation measures in the EIR do not address long-term effects of the project on the community in regard to traffic, wildlife protection, and net gain/sustainability of the trail in comparison to the mitigation measures and construction activities. The commenter states that individual cities would be responsible for trail maintenance and law enforcement.

As discussed in Section 4.14, *Transportation*, FORTAG is not anticipated to result in a significant increase in vehicle miles traveled on area roadways because the project would support increased active transportation by improving active transportation facility connectivity in Monterey County. It is anticipated that FORTAG could have the result of modestly decreasing vehicular use within the service area, since facilities of the quality of FORTAG which separates cyclists from vehicular roads are broadly and correctly perceived as safer for cyclists, potentially encouraging more people to use bicycles for short trips. As such, transportation impacts for FORTAG were determined to be less than significant, and no mitigation is required.

Mitigation is required for several identified biological resource impacts, as described in Section 4.4, *Biological Resources*. Although the commenter refers to just one measure – construction fencing – there are numerous mitigation measure techniques applied that would avoid, restore, and preserve biological resources in the long term. The environmental analysis is concerned with both short-term (“construction phase”) and long-term (“operational phase”) impacts. However, the greatest potential for impacts to biological resources would occur during the construction phase, when vegetation removal and ground disturbance is occurring. Therefore, there are a larger number of mitigation measures that apply to the construction phase.

It is unclear what the commenter suggests by net gain/sustainability of the trail. The environmental analysis in the EIR is not intended to assess the value or gain of the project, although creating economic benefit from associated retail, hospitality, and competitive events is included as a project objective in Section 2.3, *Project Purpose and Objectives* in Section 2, *Project Description*. The purpose of the EIR is to evaluate the potential environmental impacts of the project and to require mitigation measures to reduce the impacts of potentially significant effects. The EIR does not represent an approval or denial of the project, nor does it recommend approval or denial of the project or its alternatives. The EIR informs TAMC decision makers and the public of potential environmental effects and of TAMC's responsibilities regarding those effects. TAMC must certify the EIR to confirm that they have accepted this information prior to making a decision on the project. TAMC decision makers will also consider other factors, such as economic factors and public opinion, in making a final decision on the project.

Response IND 42.4

The commenter states that the Public Services section of the EIR does not adequately address impacts on public services and public safety agencies.

Section 4.13, *Public Services*, acknowledges that trail use could result in additional public service needs, such as calls for fire and police protection. However, the project would not result in population growth, and therefore there would be no change in service ratios for public services. Furthermore, Mitigation Measure PS-1 requires that the MA for the project includes provisions by each jurisdiction outlining public safety protection measures, which would be detailed for each segment through a SA.

Response IND 42.5

The commenter states that the EIR's assessment of alternative trail routes in Table 6-1 is subjective and based on money and convenience. The commenter states that a transportation artery should not be routed down a residential street. The commenter states that people can access parks along SR 218 directly from SR 218.

Table 6-1 reflects the decision making by TAMC to determine what project alternatives merit detailed consideration in the EIR. The table notes the un-met project objectives and other factors that limited the practicality or desirability of the rejected alternatives. Alternatives that were more feasible and/or would better meet the project's objectives were analyzed in detail in the EIR. These include Alternatives 1 through 4, as well as Alternative 5, which was added to this Final EIR in response to commenter input to provide analysis of a route that would bypass the Frog Pond.

Selection and analysis of alternatives was conducted in accordance with CEQA guidelines. Per CEQA Guidelines Section 15126.6, an EIR shall describe a reasonable range of alternatives to the project, or to the location of the project, which would feasibly attain most of the project's objectives but would avoid or lessen environmental effects. The selection and analysis of alternatives accordingly considered alternatives that would modify the trail alignment to avoid sensitive natural resources while still meeting project objectives to the maximum extent possible.

Regarding routing the trail near residences, note that the trail would accommodate pedestrians and cyclists, not automobiles, and would serve an estimated maximum of 3,000 users per day throughout the entire 28-mile alignment. Note that this estimate refers to the entire 28-mile length of the trail, and that the heaviest use is anticipated away from Del Rey Oaks, near CSUMB and Coastal Rec Trail connections. Within Del Rey Oaks, actual trail user numbers would be closer to 50

to 300 people per day (Powell 2020). In comparison, SR 218 from Freemont Boulevard to Del Rey Oaks had approximately 159,000 annual average daily trips (Caltrans 2016). Therefore, the characterization of the trail as a transportation artery is potentially misleading.

Routing the trail along SR 218 would not be consistent with the purpose of FORTAG to provide a multi-use recreational trail separated from roadways and accessible to people of all ages and abilities. As noted by several other comment letters, SR 218 is considered to be relatively unaccommodating to bikes and pedestrians. Therefore, SR 218 does not currently provide a good form of alternative transportation, nor a good access route to nearby parks.

Response IND 42.6

The commenter expresses a preference for a route that avoids residential neighborhoods and the Frog Pond.

Please refer Section 6, *Alternatives*, for a discussion of Alternative 2, which would bypass all of Del Rey Oaks.

Response IND 42.7

The commenter states that the project does not provide enough benefit to outweigh the potential impacts and mitigation costs. The commenter recommends exploring other alternatives or rejecting the project.

The comment is noted and herewith shared with TAMC decision makers for their consideration. The comment does not conflict with the findings of the EIR, which discloses the environmental effects of the proposed project but does not provide a value judgement on the costs or benefits of implementation.

The commenters preference for a No Project alternative is noted.

Rich Deal, TAMC
Transportation Agency for Monterey County

Robert Hale
39 Hacienda Carmel
Carmel, CA 93923

Letter IND 43

3 January 2020

Rich,

I have a few comments regarding the DEIR for the FORTAG route network:

A) Plant Surveys taken for the DEIR need to be more comprehensive and be conducted during the blooming times for all of the potential special status plant species. Surveys also need to cover several years to account for variable rainfall for annual species. I would encourage the EIR to continue surveys annually of the project corridor and adjacent BSA until those segments are constructed.

IND
43.1

B) Frog Pond Wetland Preserve - The DEIR does not capture the magnitude of the impact of bicycle use on a wide path through the preserve. At least for me Frog Pond is a peaceful area to enjoy sun in trees, birds singing without having to worry about a bicycle speeding up behind you. It is a significant impact on Public Recreation that needs to be addressed.

IND
43.2

The impacts on the wetland and riparian forest/arroyo willow are not described in the DEIR. There was no formal wetland determination conducted so I don't know how much wetland would be impacted. This needs to be quantified and appropriate mitigation be implemented.

IND
43.3

An alternative route should be considered that could be constructed as a boardwalk along the side of Hwy 218. This would separate bicycle use from Frog Pond to a great degree and provide for safety of bicycle riders. This would preserve the integrity of Frog Pond for passive nature appreciation.

IND
43.4

The Alternative 4 has the same problems of conflicting bicycle usage in the Preserve. It would impact more of the Preserves trails than the proposed route parallel to Hwy 218. At the MRPRD board meeting it was described that this would be a separate 8 foot path up above the existing hiking path, but the DEIR clearly describes and shows it following the existing northern trail. If it were to be constructed as a new path it would be difficult to separate from the trail esthetically. There are slopes that would require significant banks/retaining walls. There are oak trees to pass by and in particular one landmark oak whose branches spread out 360 to the ground that would have to be disturbed. The Preserve is for preservation and such new trail development is counter to the purpose and enjoyment of the area. Alt 4 with the existing trail would be more impactful on public enjoyment of the preserve than the proposed project.

IND
43.5

IND
43.6

The Alternative that was not considered of prohibiting bicycles could potentially be modified to banning the riding of bicycles and requiring them to walk along the southern trail. There would need to be some aspects of design to discourage riding of bicycles.

IND
43.7

I hope the alternative of constructing a boardwalk along Hwy 218 can be successfully studied and implemented. It would be a win-win solution for all.

IND
43.8

thank you for your consideration,
Robert Hale

Letter IND 43

COMMENTER: Robert Hale

DATE: January 3, 2020

Response IND 43.1

The commenter states that the plant surveys for the EIR need to be more comprehensive, conducted during blooming times, and conducted for several years.

Please refer to Responses SA 1.10 ORG 3.3. Protocol-level rare plant surveys were performed for trail segments anticipated to be developed first, during three seasonal blooming periods. Buildout of the remainder of FORTAG would occur in segments over time, depending upon funding availability and participation of the underlying jurisdictions. Because some segments may not be constructed for many years, subsequent surveys for the remainder of the FORTAG alignment would be performed prior to implementation of that segment. Additionally, due to long-term and phased buildout of the FORTAG segments, annual or repeated protocol surveys for every segment would not be appropriate at this time.

Response IND 43.2

The commenter states that the EIR does not capture the magnitude of potential bike use impacts on the Frog Pond. The commenter states that bike use is an impact on public recreation that needs to be addressed.

Under CEQA, thresholds of significance concerning impacts to recreation address whether or not a project would increase the use of existing parks, leading to deterioration; or would include recreation facilities or require construction of facilities that would have an adverse effect on the environment. As described in the EIR in Section 4.18.14, *Recreation*, the project includes features that would improve existing recreational facilities, and the project would not add to the population using recreational facilities. Therefore, impacts related to recreation were determined to be less than significant.

Refer also to Topical Response A for a summary of impacts to the Frog Pond Wetland Preserve.

Response IND 43.3

The commenter states that the EIR does not address impacts on wetlands, riparian forests, and arroyo willows. The commenter states that the EIR should quantify wetlands impacts.

Impacts to wetlands, riparian forests, and arroyo willows are discussed under Impacts BIO-2 and BIO-3 in Section 4.4., *Biological Resources*. Refer also to Response ORG 3.5 for a discussion of the timing of segments-specific wetland delineations.

Response IND 43.4

The commenter recommends consideration of an alternative route that would place a boardwalk along SR 218.

Refer to Response LA 2.1. As noted therein, a new alternative – Alternative 5, South of Frog Pond Caltrans Right-of-Way Alignment – has been added to the EIR in response to several comments suggesting such an alternative. Alternative 5 would route the trail south around, rather than

through, the Frog Pond Wetland Preserve, utilizing a boardwalk over the drainage ditch that runs parallel to SR 218. Refer to Section 6, *Alternatives*, for a full discussion and analysis of this alternative.

Response IND 43.5

The commenter describes conflicting information regarding Alternative 4, as to whether or not the trail would utilize the existing path in the Frog Pond, or would be a separate path.

Neither the proposed route through the Frog Pond nor Alternative 4, Frog Pond Wetland Preserve Northerly Alignment, would have separate paths for pedestrians and bicyclists. Under both options, the trail would be 8-feet wide and accommodate both pedestrians and bicyclists on the same path. This information is consistent throughout the EIR, and the statement at an MPRPD Board meeting about two paths was incorrect.

Response IND 43.6

The commenter describes design challenges associated with Alternative 4. The commenter states that the construction required for Alternative 4 would conflict with the preservation of the Frog Pond.

Please refer to Topical Response A for a discussion of public access at the Frog Pond. As described therein, despite its name, the Frog Pond is not a reserve that prohibits public access, but a public park with an existing trail. FORTAG would make the Frog Pond accessible to more people as part of a larger trail network and therefore be consistent with the vision of the MPRPD to increase recreational opportunities. It should also be noted that impacts to public enjoyment of the Frog Pond Wetland Preserve is not an environmental impact, and is therefore outside the scope of the EIR. Refer to Topical Response A for additional discussion about the purpose of CEQA review.

The commenter's opinion that Alternative 4 would be worse for public enjoyment is noted and herewith shared with TAMC decision makers for consideration.

Response IND 43.7

The commenter recommends consideration of prohibiting bikes at the Frog Pond or requiring that cyclists walk their bikes.

"Bicycles Excluded in Frog Pond" was an alternative considered but rejected, as described in the EIR in Section 6.2, *Alternatives Considered but Rejected*. As described therein, this alternative would reduce biological impacts but would fail to meet the project's objectives. The commenter's recommendation to modify the alternative in order to require cyclists to walk bikes through the Frog Pond is noted and herewith shared with TAMC decision makers for their consideration.

Response IND 43.8

The commenter encourages consideration of the SR 218 boardwalk alternative.

Please refer to Response IND 43.4 and the Alternative 5 analysis in Section 6, *Alternatives*, of this Final EIR.

Dear Rich Deal,

I am opposed to the Del Rey Oaks portion of FORTAG presented in the Draft EIR. The impacts of the trail have not been adequately addressed in the DEIR.

IND 44.1

The issues can be separated into three main categories. (1) The increase in vehicular traffic to the communities surrounding FORTAG which fails to meet the first objective of the project. (2) The negative impacts to the residential community surrounding Angelus Way. (3) The negative ecological impacts to the Frog Pond Preserve.

(1) INCREASE IN VEHICULAR TRAFFIC TO THE COMMUNITIES SURROUNDING FORTAG WHICH FAILS TO MEET THE FIRST OBJECTIVE OF THE PROJECT

IND 44.2

Objective 1 of FORTAG: Function as an active transportation artery for commuting and recreation, providing a safe, accessible, and separated alternative to motorized travel that **reduces vehicle trips and associated emissions.**

Although the first objective of FORTAG involves reducing motorized travel, I believe that the project will actually result in an INCREASE of vehicular traffic due to the size and scope of the project and the potential for it to become a tourist attraction. While the trail will be accessible as a transportation artery for people living near the trail, I believe that MOST trail users will drive and park to access FORTAG for recreation. **The reduction of vehicular traffic by transportation trail users will be negated by the increase of vehicular traffic by tourists and by local residents who are unable to easily access FORTAG from their homes. This was not adequately addressed in the Draft EIR.**

This will be an issue throughout the planned trail but I am focusing on the Del Rey Oaks portion of the trail.

FORTAG is a major recreation trail in one of the top tourist destinations in the state of California as well as home to 100,000 local residents. The DEIR states it will be used by 1,000 to 3,000 people daily without specifying how many of those people are expected to use the Del Rey Oaks portions. **The DEIR further states that the project will not include any new parking which means trail users will need to use existing parking. This has a VERY SIGNIFICANT**

IND 44.3

impact on the people living and working near the trail but is not addressed in the DEIR.

IND 44.4

It is unrealistic to assume that a majority of local trail users will access the trail without the use of cars since the trail will not be easily accessible. The Monterey Peninsula covers a large area and the landscape is hilly. While FORTAG, as planned, will have a “gentle grade,” most connecting streets do not. **Most trail users will not be willing to get to the trail by foot or bike due to the distance, steep grades, inadequate sidewalks, and lack of bike lanes on most Monterey Peninsula surface streets.** Most users will instead DRIVE and park near the trail.

IND 44.5

This is specifically mentioned on the FORTAG website “How will FORTAG benefit me?” The website suggests that trail users from Carmel, Salinas, and the Bay Area will drive to access the trail. I would argue that there will be residents from ALL peninsula cities that will regularly

IND 44.6

access the trail by car. This naturally includes people with mobility issues but also nearby residents without mobility issues.

The DEIR does not adequately analyze the vehicular traffic impact of FORTAG. This should be thoroughly addressed in the Final EIR recognizing that FORTAG will attract a large number of trail users that will access the trail by car which will have a **very significant** impact on the environment and residential neighborhoods.

It should not be assumed that a trail for non-motorized travel will not result in traffic. Point Lobos in Carmel and various HWY 1 and Big Sur locations are local examples of how popular hiking destinations are negatively impacted by vehicular traffic. **This should be directly analyzed including future projections of trail use based on population growth and increase in tourism.**

I am requesting that you and your team provide the public with more thorough and realistic projections regarding trail use in the following areas:

#1 The number of people who will use the trail for transportation and recreation (including formal and informal gatherings by large groups, charity walk/run events, and larger events like Ironman, which can host over 2,000 athletes and attract thousands more spectators).

#2 Where trail users will come from and how they will access the trail (comparing the number of people who will access the trail by car to the number of people who will access the trail by foot, bike, or wheelchair). This should specifically include the number of car trips that will impact 218 and Angelus Way.

#3. The number of people who will use the adjoining parks and public spaces because of the trail, but not necessarily use the trail.

It should be noted as well that Del Rey Park and the Frog Pond closes from sunset to sunrise. This will make these parts of the trail inaccessible for a large portion of the day for transportation during late Fall and Winter. **The trail hours are not clearly stated in the DEIR.** The objective of the trail being used for transportation will be greatly compromised if it will be closed from roughly 5:00pm to 7:00am. At the same time, leaving these areas of habitat open 24 hours a day is detrimental to wildlife, especially nocturnal animals.

(2) THE NEGATIVE IMPACTS TO THE RESIDENTIAL COMMUNITY SURROUNDING ANGELUS WAY

FORTAG is not simply a bike path for transportation. It is a \$30 million project that has the potential to attract an unsustainable number of tourists (local and long distance) through residential neighborhoods and sensitive habitat. The combination of these concerns should make it clear that FORTAG does not belong in Del Rey Oaks.

A. The impact of increased vehicular traffic in Del Rey Oaks

Angelus Way is a dead end street that ends at a small parking lot at Del Rey Park. The bathrooms at Del Rey Park will be **the only public bathrooms** for trail users between Del Rey Oaks and the CSUMB campus, approximately a five mile distance along current roads. This is not an example of well planned, sustainable tourism. **Del Rey Park will be an attractive parking location for trail users and that will have a VERY SIGNIFICANT impact on those of us living in the area. This should be adequately addressed in the Final EIR.**

IND
44.13

TAMC and FORTAG personnel have indirectly referred to this, however there is little discussion about the impacts in the DEIR.

For example, at the December 2019 meeting at the Marina Library, Rich Deal stated that since FORTAG would be a public trail someone could hypothetically organize a casual group of hundreds of bicyclists to meet and ride the trail without permits. He then discussed the potential benefits to local hotels as more official events are hosted on the trail (ie, Ironman).

IND
44.14

Additionally, the FORTAG website specifically states that it will “benefit” Bay Area tourists by providing additional recreation/tourist activities.

IND
44.15

“There a lot of potential for special events on FORTAG. Running events are an obvious option. The Northern Loop is a half marathon (13.1 miles); the CSUMB loop is just about a 10K (it's 5.5 miles); and the 'grand coastal loop' is just over a marathon (it's 26.4 miles). Cycling events are another option; not the super-fast ones, but the more casual ones. For example, the trail is an ideal potential component of the Sea Otter Classic's Gran Fondo, which in 2015 had a 51 mile route and a 91 mile route. Walking events for charities etc. would also be a great way to use the trail system.”

Is it true that the residents of the Angelus Way neighborhood could be regularly inundated by huge events without warning or regulation? **Angelus Way provides the ONLY access to 218 for the residents of over 50 homes.** Del Rey Park will be a very attractive meeting and parking location for the event participants and on-lookers. **This would have a VERY SIGNIFICANT impact on the residents (and on the fragile wildlife and flora at the Frog Pond) and should be addressed thoroughly in the Final EIR.** A residential community is NOT the proper location for a project like FORTAG.

IND
44.16

B. The impact of lack of public restrooms and parking along trail and resulting impact on Del Rey Oaks Park and facilities, and the Frog Pond.

Section 4.18.4 in the DEIR does not adequately address the impact of FORTAG on “Recreation.” It states that “For the purposes of this EIR, a significant impact would occur if implementation of the proposed project would result in any of the following conditions: 1. Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated...”

IND
44.17

Can you assure us that increased use of Del Rey Park and it's facilities will not result in “substantial deterioration of the facility?” **It seems like a project with potential to attract**

3,000 daily users would undoubtedly result in a higher need for bathrooms and parking as well as result in ecological deterioration of the Frog Pond Preserve. I would suggest that the impact will be VERY SIGNIFICANT. I am requesting that this area of the DEIR be re-evaluated with a realistic determination of threshold. Simply stating that a “Master Agreement” will guarantee up-keep is not enough. The inadequate up-keep of portions of the Coastal Rec Trail and Laguna Grande Park is evidence of how the deterioration of the area could look in twenty years.

C. The aesthetic impact on Angelus Way

The DEIR does not clearly describe the actual plan for Angelus Way even though extensive discussions have been held at various meetings. Initially the plan would remove parking from one side of Angelus Way, then plan was to use a “share the road” design. Unfortunately the DEIR is vague on the subject. It states that “Because there are no sidewalks in this area, the proposed project would require the addition of components that would change the visual character of the street. The quaint visual aspects of KVP 6 would give way to a more formal, recreational facility with safety features and signage.”

The listed mitigations do not clearly describe the proposed formal features. A later passage in the DEIR states, “Where the Trail would be located on existing roads (including Beach Road in the City of Marina and Angelus Way in the City of Del Rey Oaks), striping and signage would be added to delineate between the Trail and the flow of traffic.” A “share the road” design does not need striping or signage to separate the trail from traffic so I am confused why Angelus Way is included in this statement.

This proposal is unclear and does not adequately address the concerns that the rural character of the street could become more formal and that the parking options on Angelus Way could be greatly reduced. I request that the Final EIR address these concerns.

D. Increase in crime

Currently the Del Rey Oaks police department serves the city and the Airport. This results in high police presence and quick response times. However, it is expensive to maintain. **We cannot assume that the Del Rey Oaks portion of the proposed trail will be adequately patrolled by DRO police department in the near or distant future.** Recently the state auditor considered the city fiscally challenged. The future of Del Rey Oaks is never certain as it could someday cease to exist and merge with Monterey or Seaside. This would result in a **VERY SIGNIFICANT** impact on the community.

E. Cost to the city of Del Rey Oaks for maintenance and patrolling of trail in perpetuity.

The DEIR refers to a general agreement that will ensure that the trail will be maintained and patrolled by local jurisdictions without any details. Considering the complicated terrain, especially the hillsides of the former driving range behind Safeway that is subject to sink holes and slides, I would assume that maintenance of FORTAG has the potential to be very expensive to a small city. **I request that the Final EIR provide reasonable projections of the cost to the**

IND
44.18

IND
44.19

IND
44.20

city of Del Rey Oaks to maintain the trail, with special consideration to the impacts of weather (soil saturation, flooding, and intense storms with heavy concentrated rain).

F. Construction of underpass across 218

Many people cross 218 on a regular basis without any high cost traffic control measures. The City of Del Rey Oaks even posted pictures recently of wild turkeys crossing 218 in a crosswalk, unassisted.

IND 44.21

I am opposed to an underpass/tunnel because:

- it is unnecessary**
- costs too much**
- will encourage drivers to speed through the area because of lack of pedestrians/bicyclists or lighted crosswalks**
- will attract illegal activity.** Two years ago the community of Silver Lake had it's pedestrian tunnel demolished due to safety concerns over drug use, trash dumping and homeless encampments. Before the costly demolition the city attempted to lock the access to the tunnel but the gate and locks were regularly vandalized.

IND
44.22

The impact of the underpass on the residents of Del Rey Oaks is **VERY SIGNIFICANT** and should not be constructed.

G. Possibility of trespass onto private property and resulting liability.

Private properties on and near Angelus Way, including the owner-built and maintained driveway bridges over the creek, will be subject to an increased possibility of trespass. The drop from the bridges to the rocky creek below could result in serious injuries if someone were to fall. This is especially a concern during the rainy season when the water is rushing with a strong current which is very attractive to children and could easily result in a drowning.

IND
44.23

H. Using acquisition of funding to influence approval of project

Securing the ATP Caltrans funding for the Del Rey Oaks portion of FORTAG should not be used as a reason to reject alternative routes in the EIR. While funding is an important part of planning, it should not overshadow the reasonable concerns of the public.

IND
44.24

(3) THE NEGATIVE ECOLOGICAL IMPACTS TO THE FROG POND

The Frog Pond Preserve is a delicate ecosystem that will be adversely impacted by increased use. It is not the place for large groups of bicyclists or walkers participating in charity walk/runs. The Frog Pond is a designed as a destination. **I am opposed to all proposed and alternative FORTAG routes going through any portion of the Frog Pond for the following reasons:**

IND
44.25

- Negative impacts to sensitive species. This should be considered **very significant** as the current global extinction rate is rising primarily due to habitat loss and human intervention. **The impact on the Frog Pond should be included in Section 4.18.4 under recreation, as the**

proposed trail and alternative will very significantly accelerate substantial deterioration of the facility.

- Will result in large numbers of people passing through at high speeds which will be **dangerous** to pedestrians/hikers and will **change the character of the Frog Pond.**

ALTERNATIVES TO DEL REY OAKS PORTION OF FORTAG

I would like to see alternatives to the proposed trail that do not go through residential neighborhoods or the Frog Pond. Most of the proposed trail will be in non-residential neighborhoods which will have a **disproportionate** impact on the residential communities that do host the trail. The fact that this project is on the Monterey Peninsula, a tourist destination for millions of people each year, makes this more than just a bike path for local transportation and recreation. Those of us who live in the established Angelus Way neighborhood should not be forced to host a tourist attraction.

IND
44.26

I am requesting that other alternatives are explored as the current project has the potential create irreversible negative impacts to the people, plants, and animals that live in the local community. If other alternatives cannot be identified I would recommend “no project.”

IND
44.27

Please confirm that this letter has been received.

Thank you,

C. Hickey
Del Rey Oaks, CA

Letter IND 44

COMMENTER: C. Hickey

DATE: January 3, 2020

Response IND 44.1

The commenter states that they are opposed to the Del Rey Oaks portion of the FORTAG project. The commenter expresses the opinion that the EIR did not adequately address impacts regarding traffic, residential communities, and ecological impacts to the Frog Pond.

The commenter's specific concerns are addressed in Responses IND 44.2 through 44.27 below.

Response IND 44.2

The commenter states that the project would result in an increase in vehicular traffic in the communities where the trail would be constructed. The commenter states that the increase of vehicular traffic by tourists and residents that can't access the trail from their homes would negate the project's active transportation benefits.

The commenter's concerns regarding traffic are noted. However, the commenter's opinion that the trail would increase vehicular traffic is not supported by evidence. As discussed under Impact T-2 in Draft EIR Section 4.14, *Transportation*, although the proposed project may induce some new vehicle trips associated with people travelling to the trail for recreational purposes, pursuant to guidance from the Governor's Office of Planning and Research (2018), pedestrian and bicycle facilities are unlikely to lead to a substantial or measurable increase in vehicle travel. Additionally, it is reasonable to assume that some trips to the proposed trail would be redistributed from other areas: these trail users would forego traveling to another trail or outdoor space in favor of the proposed trail as the proposed trail would traverse scenic open space areas east of the urbanized areas of the cities in the project area. Redistributed trips would not increase vehicle miles traveled in Monterey County. Trip generation by a trail project is also typically constrained by parking availability. The project would not provide dedicated motor vehicle parking to serve trail users. Finally, the project would provide for pedestrian and bike use along existing roadways and would improve and connect existing trails, which could reduce vehicular traffic. Therefore, the Draft EIR's finding that the project would not substantially increase vehicle miles traveled remains appropriate.

Response IND 44.3

The commenter states that the EIR does not specify how many trail users are estimated in Del Rey Oaks.

Please refer to Response IND 26.3 for trail use projections. Trail use projections for each segment are not available at this time. A maximum of 3,000 persons daily was conservatively estimated for the entirety of the trail.

Response IND 44.4

The commenter states that the project would not include new parking, which would result in a strain on existing parking.

The commenter is correct that the project does not include new parking. The project is a trail for pedestrian and bike use. Please note that parking capacity is not included in the Appendix G checklist of the CEQA Guidelines as an environmental issue area required to be analyzed in the EIR. Furthermore, while some existing parking areas have been identified as providing parking for the trail, the primary access to the trail would be direct pedestrian and bike access from residences or workplaces. Therefore, the project does not provide additional parking capacity, and it is assumed that existing parking would be sufficient to accommodate trail users. Refer also to Response IND 44.5 below.

Response IND 44.5

The commenter states that trail users would use automobiles and existing parking in order to access the trail.

As stated on page 4.14-12 of the Draft EIR, “it is assumed that many of the daily users of the trail would either live or work along the trail or would use active transportation to reach the trail and then continue along the trail to their destination, neither of which would require the use of vehicles.” FORTAG would not have a significant impact on existing parking areas, as ample existing parking opportunities exist along the alignment.

Response IND 44.6

The commenter states that the FORTAG website describes trail users driving to access the trail. The commenter states that residents from the entire region and beyond would regularly access the trail by car. The commenter expresses the opinion that the EIR does not adequately analyze traffic impacts.

The referenced FORTAG website is not associated with TAMC or with the project’s environmental analysis. The project’s objectives are listed in Section 2, *Project Description*. Providing a tourist attraction to people outside of the project area is not an objective of the project; nor do the project’s objectives include creation of any new visitor attractions. Refer to Response IND 44.4 and IND 44.5 above for further discussion regarding motor vehicle access to the trail. As discussed therein, the project would likely redistribute existing vehicle trips from other destinations and would not substantially increase overall vehicle miles traveled in Monterey County.

Response IND 44.7

The commenter states that Point Lobos and Big Sur attractions provide examples of how hiking destinations are impacted by vehicular traffic. The commenter states that the EIR should analyze this impact and should include projections of trail use based on population growth and an increase in tourism.

Please note that the current CEQA Guidelines defines a traffic impact in terms of an increase in vehicle miles traveled, not in terms of traffic congestion. Refer to Response IND 44.4 for further discussion of the project’s impact on vehicle miles traveled. As noted therein, the project would largely redistribute existing vehicle trips and would not substantially increase vehicle miles traveled in Monterey County. As discussed in Impact T-2 in Draft EIR Section 4.14, *Transportation*, although the proposed project may induce some new vehicle trips associated with people travelling to the trail for recreational purposes, pursuant to guidance from the Governor’s Office of Planning and Research (2018), pedestrian and bicycle facilities are unlikely to lead to a substantial or measurable increase in vehicle travel.

Response IND 44.8

The commenter requests more thorough and accurate projections regarding the number of people that would use the trail for transportation and recreation, including special events.

As stated on page 2-1 of the Draft EIR, “the estimated number of trail users would be between 1,000 and 3,000 daily, with the highest usage occurring on the CSUMB campus and near the existing Monterey Bay Coastal Recreation Trail.” More specific estimates are not available and would be difficult to accurately project at this time. Whether or not special events are held on the trail would be determined by the local jurisdictions.

Response IND 44.9

The commenter requests more thorough and accurate projections regarding where trail users would come from and how they would access the trail, including estimates for how many people would access the trail by foot, by, or wheelchair, and an estimate for how many car trips would impact SR 218 and Angelus Way.

The commenter’s concern about vehicle trips generated by the project is not supported by evidence or a data source that can be used to estimate trips. As described above, detailed estimates regarding trail use are not available. Absent this information, it would be speculative (pursuant to CEQA Guidelines Section 15145) to project the origin and modal distribution of trail visitors, or to evaluate any resultant impact on traffic congestion. Furthermore, as discussed in Response 44.7, a project’s effect on traffic congestion from additional trips is not a significant environmental impact under the current CEQA Guidelines; rather, the relevant impact is on vehicle miles traveled. As described in Draft EIR Section 4.14, *Transportation*, analysis of vehicle miles traveled is not required for pedestrian and bicycle facilities because such projects are unlikely to lead to a substantial or measurable increase in vehicle travel.

Response IND 44.10

The commenter requests more thorough and accurate projections regarding how many people would use the parks and public spaces that are near the trail, without using the trail itself.

Detailed estimates were not prepared regarding how many people would use public spaces near the trail. The project would improve regional access to trails and open space, but would not result in an increase in the population that is served by existing parks. As discussed under Impact PS-3 in Draft EIR Section 4.13, *Public Safety and Services*, the FORTAG project would not result in the need for additional recreational facilities or parks, the construction of which could cause significant environmental effects, nor result in the degradation of existing park facilities in the vicinity on the project alignment. For further discussion, refer to Response IND 43.2.

Response IND 44.11

The commenter notes that Del Rey Park and the Frog Pond are closed from sunset to sunrise. The commenter states that trail hours are not clearly stated in the EIR. The commenter states that closing the trail at night would compromise the project’s transportation goals, while leaving the trail open 24 hours would impact wildlife.

Trail hours are discussed in the EIR in Section 2.5.1, *Hours and Closures*. As described therein, most of the trail would be open 24 hours daily, but hours of operation could be modified by jurisdictions in which individual segments occur. The City of Del Rey Oaks and Monterey Peninsula Regional Parks

District would determine whether or not to enforce limited trail hours within Del Rey Park and the Frog Pond.

Refer to Topical Response A for a discussion of impacts to biological resources within the Frog Pond Wetland Preserve. As noted therein, most wildlife movement occurs late night to early morning and amphibians move more frequently during wet weather. Bicycle traffic would be at its lowest during these times of peak wildlife movement (i.e., at night or during rain events), regardless of whether the trail is open 24 hours. This reduced activity would minimize the potential for bicycle strikes on wildlife.

Response IND 44.12

The commenter states that the project would bring an unsustainable number of tourists into residential neighborhoods and sensitive habitat.

Please refer to Response IND 44.6 and IND 44.7 above regarding tourism. The commenter's claim that the project would bring "unsustainable" tourism is not supported by evidence.

The commenter's opposition to the trail entering Del Rey Oaks is noted and herewith shared with TAMC decision makers for consideration. Alternative 2 would bypass the City of Del Rey Oaks, eliminating the proposed trail through Work Memorial Park, Angelus Way, Del Rey Oaks Park, and the Frog Pond Wetland Preserve. Refer to Section 6, *Alternatives*, for additional discussion of this alternative.

Response IND 44.13

The commenter states that Del Rey Park would be used for parking and restroom access by trail users, which would impact local residents. The commenter states that parking at Del Rey Park should be addressed in the EIR.

Please refer to Response LA 44.5 above for a discussion of parking. For further discussion of parking, refer to Response LA 5.23. Note that human distress related to sharing public parking spaces at a park is not an environmental impact. The EIR addresses various environmental impacts that indirectly relate to quality of life, such as noise and transportation, but quality of life in and of itself is not an environmental impact.

Response IND 44.14

The commenter states that TAMC staff indicated that hundreds of bicyclists could schedule informal events without permits.

Special events would be subject to the applicable regulations of each jurisdiction, such as special event permitting regulations, or nuisance ordinances.

Response IND 44.15

The commenter refers to the FORTAG website description of special events that could occur on the trail.

The referenced FORTAG website is not associated with TAMC or with the project's environmental analysis. Refer to Response IND 44.14 above regarding special events.

Response IND 44.16

The commenter asks if Angelus Way residents could be regularly inundated by huge events without warning or regulation.

Refer to Response IND 44.14 above regarding special events. Refer to Response IND 44.13 regarding parking. The commenter's opinion that a bike trail does not belong in a residential community is noted and herewith shared with TAMC decision makers for consideration. It should be clarified, however, that the analysis throughout this EIR is based on the CEQA Guidelines and established thresholds of significance. It is unclear what established threshold the commenter is referring to when they state that the use of Angelus Way by bicyclists would be a very significant impact to residents.

Refer to Topical Response A for a discussion of wildlife and habitat impacts within the Frog Pond Wetland Preserve.

Response IND 44.17

The commenter requests reevaluation of the EIR Recreation analysis to account for the potential of the project to result in substantial deterioration of Del Rey Park and ecological deterioration of the Frog Pond.

The project would improve existing trails and improve public access to open space, but would not increase the population served by existing parks. Therefore, although some increased use at parks along the trail could occur, impacts would be less than significant. The commenter mentions the EIR estimate of 3,000 daily trail users. Note that this estimate refers to the entire 28-mile length of the trail, and that the heaviest use is anticipated away from Del Rey Oaks, near CSUMB and Coastal Rec Trail connections. Within Del Rey Oaks, actual trail user numbers would be closer to 50 to 300 people per day (Powell 2020).

Response IND 44.18

The commenter states that the EIR does not clearly describe the trail design for Angelus Way. The commenter requests clarification as to how the trail would share the road with vehicular traffic, how the trail would impact the rural character of Angelus Way, and whether or not parking available street parking would be reduced.

Refer to Response IND 8.1, which includes a revision to the EIR project description to clarify the improvements along Angelus Way, which would consist only of signage. Therefore, there would be minimal changes to the roadway that could impact the rural character of the street. No street parking would be lost. Trail users and motor vehicles would share the road without special lane designation for the trail.

The proposed project would not modify existing parking opportunities on Angelus Way.

Response IND 44.19

The commenter expresses concern that the Del Rey Oaks Police Department would not be able to adequately patrol the Del Rey Oaks portion of the trail. The commenter describes the concern that the City's fiscal challenges could lead to the need to merge the City with Monterey or Seaside.

The project would not result in an increase in population. Therefore, a substantial strain on public services is not anticipated. The suggestion that because of the project the City of Del Rey Oaks could

“cease to exist and merge with Monterey or Seaside” is a drastic conclusion, and is not supported with evidence. The broader fiscal concerns of Del Rey Oaks are outside of the scope of the EIR. No further response is required.

For further discussion of project implementation and funding, refer to Topical Response B.

Response IND 44.20

The commenter requests projections of the trail maintenance costs to the City of Del Rey Oaks.

Per Section 15131 the CEQA Guidelines, economics may be included in an EIR, but they may not be treated as significant effects. As such, the cost of maintaining the trail is considered outside the scope of the EIR. Note that it will be the responsibility of each jurisdiction to own and maintain, or otherwise ensure the maintenance of the trail within its jurisdictional boundaries. No FORTAG segment would be developed without agreement from the underlying jurisdiction accepting responsibility (either itself or through arrangements) to maintain that segment and enforce applicable rules.

Response IND 44.21

The commenter expresses the opinion that an underpass across SR 218 would be unnecessary, too expensive, and would encourage speeding.

The commenter’s opinions regarding cost and necessity are noted. These comments do not pertain to environmental effects and thus are outside of the scope of the EIR. Regarding speeding, the commenter suggests that removal of conflicts between motor vehicles and pedestrians/cyclists would be a negative effect because it would result in speeding. However, separation of pedestrians/cyclists from motor vehicles is generally considered to be a positive effect regarding safety.

Response IND 44.22

The commenter states that an underpass across SR 218 would attract illegal activity, such as drug use, trash dumping, and homeless encampments.

The commenter’s concerns regarding illegal activity are noted. As described above under Response 44.20, no FORTAG segment would be developed without agreement from the underlying jurisdiction accepting responsibility to maintain that trail segment and enforce applicable rules. For Del Rey Oaks, this would include the maintenance of safe conditions at the proposed underpass across SR 218. Note that the underpass would include lighting. The project would not result in an increase in population served by police or other public services, and therefore would not affect service ratios. Thus, impacts related to public services were determined to be less than significant. The commenter refers to the effect of the proposed underpass “on the residents of Del Rey Oaks.” Note that the environmental analysis pertains to impacts on the environment, and does not directly address the opinions or quality of life of individuals living near the project area, beyond those issues related to environmental quality, such as noise, transportation, and air quality.

Response IND 44.23

The commenter states that the project could result in trespassing on Del Rey Oaks properties. The commenter states that trespassing children could be attracted to rushing water, resulting in drowning.

The commenter's description of trespassing risks does not support the assertion that the project could "easily result in drowning." Angelus Way is a public street, lined with residential homes, some of which are accessed by driveways that cross a creek on the south side of Angelus Way. To the extent that the existing conditions may present trespassing risks and drowning hazards, the project would not exacerbate these existing risks and hazards. Note that along Angelus Way, physical improvements would be limited to adding signage.

Response IND 44.24

The commenter states that the availability of funding for the project should not be used as a reason to reject alternative routes and should not overshadow public concerns.

The EIR presents a range of reasonable alternatives and also collects and responds to public comments. TAMC decision makers may consider the environmental analysis in the EIR, public concerns, and other factors to make an informed decision regarding the project. The commenter's opinions that the loss of funding should not be considered is herewith shared with TAMC decision makers for their consideration.

Response IND 44.25

The commenter states that they are opposed to routing the trail through the Frog Pond, because bike use would change the character of the park, impact sensitive species, endanger pedestrians, and deteriorate the park facilities.

Please refer to Topical Response A for a summary of biological resources impacts within the Frog Pond Wetland Preserve. As summarized therein and discussed in greater detail in Section 4.4, *Biological Resources*, impacts to sensitive species would be less than significant with mitigation. The commenter's statement that this would be "very significant" is not based on fact nor supported by evidence.

Regarding deterioration of Frog Pond facilities, the project would improve the existing path and connections to the park. The MA and SA would stipulate responsibilities for maintaining the trail and enforcing trail rules. Refer to Response 43.2 for a discussion of environmental analysis related to recreation facilities. As described therein, the project would not increase the population served by local parks; impacts related to recreation were determined to be less than significant.

Regarding impacts to the character of the Frog Pond, the commenter's concern is noted. While the "character" of a place is not in itself an environmental impact, related issue areas such as noise and aesthetics were analyzed in the EIR, and mitigation was required as needed. It is not unreasonable to predict that the project could change the character of the Frog Pond; while character is not directly addressed in the EIR outside of the related environmental impact issue areas, TAMC may consider this concern in its decision making process, and implementing entities may also consider this issue in development of the MA and Supplemental Agreements, which would designate responsibilities for trail maintenance and rule enforcement.

Please refer to Response 41.3 for a discussion of pedestrian hazards. As described therein, FORTAG would not substantially increase hazards due to incompatible uses.

Response IND 44.26

The commenter requests consideration of alternatives that avoid the Frog Pond and residential neighborhoods. The commenter states that residents should not be forced to host a tourist attraction.

The commenter's preference for an alternative that avoids the Frog Pond and residential neighborhoods is noted. Refer to Response 44.12 above for discussion of Alternative 2, which would bypass the city of Del Rey Oaks. Refer to Section 6, *Alternatives*, and Topical Response A for further discussion of alternatives.

Response IND 44.27

The commenter requests that other alternatives be explored and reiterates their concerns regarding impacts to residents and wildlife. The commenter recommends identifying an alternative project or rejecting the project.

Alternatives to the project are analyzed in Section 6, *Alternatives*. The commenter's preference for the No Project alternative is noted and herewith shared with TAMC decision makers for their consideration.

Subject: Del Rey Oaks Frog Pond

Letter IND 45

Hello Mr. Deal and Mr. Payan,

I've read what may be planned for the pond and hope it isn't true.

My wife and I recently purchased a home in Seaside off of La Salle. We recently discovered the gem that is the Frog Pond. We have two young daughters, 7 and 2. They saw it last year when it was full of water. Then slowly saw the water go away until the recent rain came. They were fascinated. It not only became educational moments, but life moments.

IND 45.1

In this crazy digital world, we need these simple, but crucial moments in nature.

I have a coworker that lives in Salinas and was asking for suggestions to take family photos for the holidays. They were considering Carmel Valley, Big Sur or Toro Park. I recommended the pond and they thought it was one of the most enchanting places they'd ever been.

I understand the incentives and also the jobs it would create, but please consider our youth and what they'd miss out on.

IND 45.2

It's a five minute drive that creates lifelong memories.

Please take a moment and let that sink in.

Please confirm that you have taken the time to read this so I know my voice wasn't ignored.

Thank you,
Niño Landingin

Letter IND 45

COMMENTER: Niño Landingin

DATE: January 3, 2020

Response IND 45.1

The commenter describes the special natural character of the Frog Pond.

The comment is noted. Because the comment does not address the adequacy of the EIR or CEQA process, no further response is required.

Response IND 45.2

The commenter requests consideration of the experiences of young people at the Frog Pond.

Please refer to Topical Response A for a discussion of public use at the Frog Pond. The project would improve public access to the Frog Pond, which would provide an opportunity for more young people to benefit from the park. However, the commenter's concern regarding potential adverse effects on the community that currently enjoys the Frog Pond is noted and shared with TAMC decision makers for their consideration.

Letter IND 46

COMMENTER: Mary O'Donnell

DATE: January 3, 2020

Response IND 46.1

The commenter requests that the project not ruin a park with unnecessary engineering feats. The commenter states that they were traumatized by a separate bike path project on Fremont Boulevard.

The comment is noted. Because the comment does not address the adequacy of the EIR or CEQA process, no further response is required.

Response IND 46.2

The commenter requests that if a trail must be built in the Frog Pond that it utilize low impact development.

As discussed in Section 2, *Project Description*, of the Draft EIR, the proposed trail width through the Frog Pond Wetland Preserve would be reduced to eight feet, and a stable, permeable surface would be used in lieu of impermeable pavement, due to the sensitive natural resources in the area. Improvements would only be made to a 0.3-mile portion of the existing unpaved trail within the Frog Pond Wetland Preserve that coincides with the proposed FORTAG alignment. As described in Section 4.10, *Hydrology and Water Quality*, construction activity would implement best management practices such as erosion control measures that would reduce the adverse physical effects of project construction.

Letter IND 48

Comments on Fort Ord Regional Trail and Greenway Project Draft Environmental Impact Report

I am a Marina resident in favor of the proposed Fort Ord Regional Trail and Greenway Project project route analyzed in the Draft Environmental Impact Report. Keeping access to Frog Pond Wetland Preserve would provide access to wildlife viewing opportunities with reduced impacts to air quality. Additionally, the proposed project route would provide better access to Ryan Ranch, which would provide a safe opportunity to commute to work centers using alternative means (riding bicycles, walking), and thus, reduce impacts to air quality.

Subject: Support Bike Trail

Letter IND 49

I'm writing to express my support for the FORTAG bike trail.

IND 49.1

I've attended your public workshops and I'm impressed with the care you are taking in it's design and the public outreach process you are following.

I've looked at studies about bike trails and find lots of data supporting bike trails and the value they add to communities from recreation alternatives to home values and to concerns about criminal activity.

I've spoken with our police chief who has experience with bike trails public safety issues. He expressed is support for the trail and explained the many steps law enforcement can take to address public safety. ,

The one concern I have is the trail route through the Frog Pond. However having attended workshops and looking at and listening to the data presented, I'm confident that the final decision, either way, will have been based on careful consideration of the science and technical information available.

IND 49.2

From a public relations perspective, not going through the Frog Pond would, I believe, have a positive response if the alternative(s) is doable. .

I look forward to the trail becoming a reality. Thank you for the vision and hard work you have put in to this project. It will be a valuable recreation asset to the to the community.

Sincerely
Gerry Orton
Del Rey Oaks.

Letter IND 49

COMMENTER: Gerry Orton

DATE: January 3, 2020

Response IND 49.1

The commenter expresses support for the project. The commenter praises the care taken in the project design and public outreach. The commenter describes a favorable discussion with law enforcement personnel regarding the project.

The commenter's support for the project is noted and herewith shared with TAMC decision makers for consideration. No further response is required.

Response IND 49.2

The commenter states that they are concerned about routing the trail through the Frog Pond, but are confident that a wise final decision will be made. The commenter states that avoiding the Frog Pond would be beneficial from a public relations perspective.

The comment is noted. Refer to Topical Response A for a discussion of potential impacts to and alternatives to avoid the Frog Pond Wetland Preserve. Because the comment does not address the adequacy of the EIR or CEQA process, no further response is required.

DRO, CA

Letter IND 50

COMMENTER: Audrey Magallanes

DATE: January 3, 2020

Response IND 50.1

The commenter states that they are opposed to adding a bike path through the Frog Pond. The commenter states that the Frog Pond is a protected park. The commenter states that an ill-advised, poorly thought-out plan should not be carried out simply because grant money is available.

As described in Topical Response A, despite its name, Frog Pond is not a reserve that prohibits public access, but a public park with an existing trail. FORTAG would make the Frog Pond accessible to more people as part of a larger trail network and therefore be consistent with the vision of the MPRPD to increase recreational opportunities.

The commenter's opinion that the project plan is ill advised and poorly thought-out is noted. The project is the product of several years of planning and coordination between local jurisdictions and agencies, spearheaded by community members. An extensive public engagement process occurred to help shape the project plan, and an EIR was prepared in accordance with CEQA. Regarding grant funds, TAMC secured a competitive grant of \$10.3 million to fund construction of the Canyon Del Rey/SR 218 segment between Del Rey Woods Elementary School and Laguna Grande Regional Park; this grant is not applicable to the portion of the trail that would run through the Frog Pond Wetland Preserve.

The commenter's preference for an alternative that avoids the Frog Pond is noted and herewith shared with TAMC decision makers for their consideration.

Response IND 50.2

The commenter requests that their vote against routing the trail through the Frog Pond be added to the project records.

The project is not subject to a public vote. However, the commenter's letter is part of the project record by way of inclusion in the Final EIR, and the commenter's preference for an alternative that avoids the Frog Pond is noted and herewith shared with TAMC decision makers for their consideration.

Subject: Hiking, Biking Trail....Carlton Drive, Del rey Oaks

Letter IND 51

Diane Stotler

26 Carlton Drive
Del Rey Oaks, CA
93940-5527

Dear Mr. Deal,

I am opposed to the proposed Hiking Biking Trail as per Carlton Drive.

The Recreation Trail that runs along Monterey Bay is primarily flat, and wide enough to accommodate both hikers and bikers, as well as occasional maintenance vehicles. I have noticed that the hiking biking trails that run through the green belts in Davis, California, are also flat and wide enough for maintenance vehicles.. Carlton Drive is located on a steep hill. This is not a good situation for hikers who will be encountering bikers, who will most likely be travelling fast on this steep, narrow path. And I say narrow path, , because there is no way it could be very wide considering the width of Carlton Drive, even if the present bike trail and berms were removed.

IND 51.1

This proposed project could affect the quality of life of residents on both sides of Carlton Drive. If, to make the proposed project wide enough, it will be necessary to cut into the embankment on the west side of Carlton. This could result in erosion of the embankment which might cause degradation of the property of the uphill residents. To counter this erosion with stone or concrete walls could provide further danger to fast travelling bikers should they collide with it. Three years ago, Carlton was reconfigured and our parking was cut in half, which affects our ability to have any gatherings. I don't know any Carlton resident who is in favor of the proposed project and I aver that most residents would prefer to have Carlton the way it was before...without the bike trail in the middle and the berms. We have only seen a few bikers on the present bike path, and that was two and a half years ago.

IND 51.2

I am also writing this letter on behalf of Bernadette Dudley, 28 Carlton Dr, as she has has arthritic issues and is unable to type at this time.

IND 51.3

Sincerely,

Diane Stotler

Letter IND 51

COMMENTER: Diane Stotler and Bernadette Dudley

DATE: January 3, 2020

Response IND 51.1

The commenter states that they are opposed to routing the trail on Carlton Drive. The commenter states that Carlton Drive is steep and narrow, which would result in trail safety hazards.

The commenter's opposition to routing the trail on Carlton Drive is noted.

To clarify what is proposed along Carlton Drive, Section 2.4, *Project Characteristics*, under Canyon Del Rey/SR 218 segment, has been revised as follows to specify the trail design along Carlton Drive/Highland Street.

From Canyon Del Rey/SR 218 near the Del Rey Oaks City Hall, the Trail would extend northeast up Carlton Drive to Plumas Avenue. Along Carlton Drive/Highland Street, the Trail would consist of a new multi-use sidewalk on the west side of the road. The sidewalk would be 12-feet wide with a five-foot buffer between the roadway and the sidewalk. The width and slope of Carlton Drive/Highland Street is an existing condition, as the road is already utilized by pedestrians and cyclists. The project would separate and buffer pedestrians and cyclists from automobile traffic, thus reducing existing safety hazards.

Response IND 51.2

The commenter states that the project could affect quality of life for Carlton Drive residents. The commenter states that cutting into the embankment on the west side of Carlton Drive could result in erosion or safety hazards. The commenter states that not many bikers use the current bike path on Carlton Drive.

Quality of life is not an environmental effect under CEQA and therefore is not directly addressed in the EIR. However, environmental impact areas that contribute to quality of life, such as noise and traffic, are addressed in the EIR. All impacts were determined to be less than significant or less than significant with mitigation.

Regarding erosion, the pertinent construction details are not yet available. However, as described in Section 4.7, *Geology and Soils*, the project would include a stormwater pollution prevention plan that describes erosion and sediment controls. The project would also comply with each jurisdiction's regulations for erosion control. Therefore, impacts related to erosion were determined to be less than significant without mitigation.

The comment regarding current use of bikes on Carlton Drive does not conflict with the EIR analysis. No further response is required.

Response IND 51.3

The commenter states that their letter is also on behalf of Bernadette Dudley.

The comment is noted and the letter is recorded as submitted by both commenters.

Subject: Bike path

Letter IND 52

Dear Rich and Rafael, I am a resident of Del Rey Oaks. For the record, please take note of my **strong objection** to the proposed TAMC bike path anywhere near the Frog Pond. I walk at the pond and enjoy this local treasure regularly. I strongly object to sacrificing the tranquility of the Frog Pond area by building a new bike path.

IND 52.1

In addition, as all are aware, Cyn Del Rey/218 is a very dangerous road for cyclists, and not so great for drivers either; drivers regularly illegally pass on the right, putting themselves squarely in the middle of the bike lanes and endanger all on the road. I see this everyday. There has to be a better way - a more direct way that will satisfy the plan and be safer for the cyclist. Why is this a necessary expenditure and how has it been proven that it is necessary to the safety and welfare of all residents, and necessary at all, for that matter? That begs the questions: how many people would this new bike path will be servicing? How will there be a return on the investment and really who is this intending to serve? The existing rec trail is fantastic. The new Fremont Street bike path is a nightmare and anywhere near 218 would be even worse. Please leave the Frog Pond as is, to be enjoyed as a peaceful recreation area for all that use it, and put the bicyclist safely on one of the existing residential roads. Thank you for your attention and please confirm that you have received my comments.

IND 52.2

IND 52.3

your vision...realized

Letter IND 52

COMMENTER: Helaine Tregenza

DATE: January 3, 2020

Response IND 52.1

The commenter states that they are a Del Rey Oaks resident and are opposed to the routing the trail anywhere near the Frog Pond.

The commenter's opposition is noted. Please refer to Topical Response A for a discussion of project impacts within the Frog Pond Wetland Preserve.

Response IND 52.2

The commenter describes SR 218 as a dangerous road for cyclists and cars, because cars pass illegally on the right side. The commenter states that there should be a way to provide safe transportation for cyclists.

The proposed project would not utilize SR 218. As discussed in Section 6, *Alternatives*, an alternative that would extend along SR 218 between Fremont Boulevard and the Frog Pond Wetland Preserve was considered, but ultimately rejected from detailed analysis in the EIR because such an alternative would not be feasible, would not meet the purpose and objectives of FORTAG, and would not include ATP funding.

Response IND 52.3

The commenter asks a series of questions regarding the necessity and safety of the project, return on investment, and who the project intends to serve.

As described in Section 2.3, *Project Purpose and Objectives*, "the purpose of the project is to provide an accessible multi-use path for recreation and active transportation for residents and visitors." Public safety is discussed in the EIR in Section 4.14, *Transportation*, and Section 4.13, *Public Safety and Services*. Impacts related to these issue areas were determined to be less than significant or less than significant with mitigation.

Return on investment does not pertain to an environmental effect and is outside of the scope of the EIR. No further response is required.

Response IND 52.4

The commenter requests that the project avoid the Frog Pond and instead route cyclists along residential roads.

The commenter's preference for an alternative that avoids the Frog Pond and places the trail on existing residential roads is noted and herewith shared with TAMC decision makers for their consideration.

Subject: The FROG POND

Hello Rich,

I was going to write to you about why I do not approve of a bike trail going through the Frog Pond and then my son told me that he was really upset about it because his grandmother used to walk him to it several times a week and he has very few memories of her but this is one that he cherishes. We live in such a special place, such a Mecca for all types of tourists, we cater to so many diverse interests, i.e. motorcyclists, cruise ships, auto enthusiasts, marathons, golfers, etc. and we change so many things to encourage this tourism already. Why should we risk the peace, solitude and natural beauty of this place to benefit bicyclist, when there are alternate routes available?

IND 53.1

Thanks

Mary Tucker

Letter IND 53

COMMENTER: Mary Tucker

DATE: January 5, 2020

Response IND 53.1

The commenter describes their personal connection to the Frog Pond. The commenter discusses tourism and asks why the Frog Pond should be put at risk when there are alternate routes available.

The commenter's preference for an alternative that avoids the Frog Pond is noted and herewith shared with TAMC decision makers for their consideration.

The comment also suggests that the project is intended to cater to tourism, which is not accurate. As described in in the EIR in Section 2.3, "the purpose of the project is to provide an accessible multi-use path for recreation and active transportation for residents and visitors." The seven project objectives listed in Section 2.3 include connection of people and communities to open space, and enhancement of connections between the region's existing communities.

Comments on Public Draft EIR

This includes written comments from the person below on the Public Draft Environmental Impact Report (EIR) for the Fort Ord Regional Trail and Greenway project. Comments should be focused on the sufficiency of the EIR in identifying and analyzing the possible environment impacts of the project and ways to avoid or mitigate the significant impacts (CEQA Guidelines sec. 15201).

Letter IND 54

COMMENTER: Greg Simmons

DATE: December 12, 2019

Response IND 54.1

The commenter states that they support trail routes that maximize user safety and minimize exposure to car traffic.

The siting and design of FORTAG prioritizes separation of trail users from motor vehicle traffic. The comment is noted.

Response IND 54.2

The commenter states that they are a cyclist and a walker and that they support the project.

The commenter's support for the project is noted and herewith shared with TAMC decision makers for consideration.

Response IND 54.3

The commenter states that they would like to see plans for connecting FORTAG to Salinas in the future, and that selection of specific FORTAG design options could consider those future connections.

The comment is noted and herewith shared with TAMC decision makers for their consideration. A connection to Salinas is not proposed at this time, and is not analyzed in the Draft EIR.

Response IND 54.4

The commenter states that they support the project and support providing access to nature.

The commenter's support for the project is noted and herewith shared with TAMC decision makers for consideration.

Response IND 54.5

The commenter reiterates their support for the project.

The comment is noted. No further response is required.

Don Gwiber
12-12-19

IT APPEARS THAT MOST OF THE CONTROVERSY REGARDING THIS PROPOSAL IS IN **DEL REY OAKS**. THE PROPOSED ROUTE OF THE TRAIL WOULD BE BOTH IN RESIDENTIAL AREAS ^{and} IN A WILD, NATURAL AREA, THE FROG POND WETLAND PRESERVE. THE FROG POND IS OWNED AND OPERATED BY THE MONTEREY PENINSULA REGIONAL PARK DISTRICT (AND NOT BY THE CITY OF DEL REY OAKS.)

IND 55.1

I ATTENDED THE MEETING LAST NIGHT WITH THE REGIONAL PARK DISTRICT, WHERE THE FOCUS WAS THE FROG POND. MANY PERSONS EXPRESSED THEIR CONCERNS ABOUT IMPACTS ON THE FROG POND.

IND 55.2

THEIR CONCERNS ARE WELL JUSTIFIED. THE FROG POND IS A DELICATE, WONDERFULLY DIVERSE ECOSYSTEM. IT IS NOT A PARK; IT IS A PRESERVE. IT IS SO BECAUSE OF WHAT IS THERE, A SEASONAL WETLAND WITH LARGE POPULATIONS OF RESIDENT BIRDS AND GREAT MIGRATORY SHELTER AND SUSTENANCE.

THE PARK DISTRICT THOUGHT ENOUGH OF THIS HABITAT TO PUBLISH A BOOKLET, "PLANTS OF THE FROG POND NATURAL AREA, " WRITTEN AND DRAWN BY L. DITTMAN IN 1983.

IND 55.3

THE BOOKLET DESCRIBES FIVE DISTINCT ECOSYSTEMS IN THIS 17 ACRE PRESERVE, AND IDENTIFIES 101 SPECIES OF PLANTS, AND INDICATES THERE ARE 100 MORE THERE. FURTHERMORE, ONCE AGAIN THIS IS A PRESERVE, NOT A PARK, MEANING WHAT IS IMPORTANT ABOUT THIS BRILLIANT PRESERVE IS WHAT LIVES THERE AND HOW. SO THE EMPHASIS IS ON THE LAND, AND THE DUTY OF SOCIETY IS FIRST AND FOREMOST TO PROTECT IT. IF ACCESS CAN BE GRANTED WHILE PROTECTING THE LAND, IT MUST NOT COMPROMISE THE HABITAT.

IT IS THE OPINION OF THOSE WHO KNOW THE FROG POND WELL THAT BRINGING THE TRAIL THROUGH THE FROG POND IS AN EXTREMELY BAD IDEA, NO MATTER WHERE THE ROUTE. BIRD EXPERTS AND PLANT EXPERTS WHO GO THERE REGULARLY, AND WHO HAVE BEEN THERE RECENTLY BY INVITATION CITE THE UNIQUE NATURE OF THE ECOSYSTEMS THERE, HARD TO FIND ANYWHERE LIKE IN NEARBY, AND THAT THE BIRDS WHO FREQUENT OR VISIT THE PLACE FOR ITS MARSHES OR FOR ITS WILLOW/ DOGWOOD CORRIDORS RETREAT FROM BICYCLES. THE FROGS FOR WHICH THE PLACE IS NAMED, AND WHICH I SEE CROSSING THE TRAILS WILL BE CRUSHED BY BICYCLES.

IND 55.4

AND ABOUT THE PEOPLE WHO USE THE FROG POND—DELICATELY, AND WITH LOVE AND CARE—THEY ARE DIVERSE, BUT ARE USUALLY THOSE WHO VALUE THE NATURAL WORLD. THEY ARE HIKERS, DOG WALKERS, RUNNERS, SOMETIMES, AND VERY FREQUENTLY MOTHERS WITH TODDLERS. THESE PEOPLE ARE NOT LOOKING OVER THEIR SHOULDERS FOR APPROACHING, SPEEDING BICYCLES. IF THE TRAIL IS OPENED TO BIKES, THEY WILL HAVE TO DO SO, OR, MORE LIKELY, FEELING UNEASE OR THAT THEIR CHILD IS AT RISK, NO LONGER USE THE TRAILS.

IND 55.5

THERE ARE TWO ALTERNATIVES, BOTH BAD. THE ONLY ACCEPTABLE ALTERNATIVE IN THE EIR IS TO ROUTE THE TRAIL AWAY FROM THE FROG POND, AND INTO THE MORE NORTHERLY NEIGHBORHOODS.

IND 55.6

THERE IS ANOTHER ALTERNATIVE, NOT MENTIONED IN THE EIR. THAT IS TO ROUTE THE TRAIL ON AN ENGINEERED BOARDWALK ON THE CREEKSIDE OF 218, AND THEN ON JIM MOORE AND UNDER THAT ROAD. THERE IS SOME COMPROMISE IN THIS SOLUTION, BUT IT WOULD POSSIBLY BE ACCEPTABLE, DEPENDING ON THE DETAILS.

IND 55.7

2

I URGE DECISION MAKERS TO FIND A WAY TO FULFILL THE MISSION OF THE TRAIL | IND 55.7
WITHOUT ROUTING THROUGH THE FROG POND WETLAND PRESERVE.

DON GRUBER

3

Letter IND 55

COMMENTER: Don Gruber

DATE: December 12, 2019

Response IND 55.1

The commenter states that there is controversy regarding routing the trail through the Frog Pond and through residential areas. The commenter states that the Frog Pond is owned and operated by the Monterey Peninsula Regional Park District, not by the City of Del Rey Oaks.

The commenter's concerns are noted. Please refer to Topical Response A for a discussion of project impacts within the Frog Pond Wetland Preserve.

Response IND 55.2

The commenter states that the Frog Pond is a preserve, not a park, and contains a delicate and diverse ecosystem.

The commenter's concerns are noted. Please refer to Topical Response A for a discussion of biological resource impacts and public use at the Frog Pond. As described therein, despite its name, the Frog Pond is not a reserve that prohibits public access, but a public park with a trail. FORTAG would make the Frog Pond accessible to more people as part of a larger trail network and therefore be consistent with the vision of the MPRPD to increase recreational opportunities.

Response IND 55.3

The commenter describes the history of documenting the Frog Pond's wildlife. The commenter states that there is a societal duty to protect the Frog Pond, and that access should not be granted that would compromise the habitat.

The comment is noted and herewith shared with TAMC decision makers for their consideration. As described in Section 4.4, *Biological Resources*, a Biological Resources Assessment was prepared for the project, which provides more recent information on the Frog Pond than the documents described by the commenter. Additional studies and measures are required by the EIR as mitigation measures for the project. Refer to Topical Response A for further discussion of impacts to wildlife at the Frog Pond. As described therein, impacts would be less than significant or less than significant with mitigation.

Response IND 55.4

The commenter describes the wildlife at the Frog Pond and states that bike use would impact the wildlife.

Please refer to Topical Response A for a discussion of impacts to wildlife at the Frog Pond Wetland Preserve, including birds and frogs.

Response IND 55.5

The commenter describes the people that visit the Frog Pond, and states that bike use would compromise the existing pedestrian use.

The commenter's concerns regarding bike use within the Frog Pond Wetland Preserve are noted and hereby shared with decision makers for consideration. Please refer to Topical Response A for a detailed discussion of impacts to the park, including those related to biological resources, safety, and the overall tranquility and enjoyment of the Frog Pond.

Response IND 55.6

The commenter states that the only acceptable trail route included in the EIR is to avoid the Frog Pond and instead utilize neighborhoods to the north.

The commenter's preference for an alternative that avoids the Frog Pond is noted. Refer also to Response IND 17.4 for a summary of alternatives that would either avoid Del Rey Oaks altogether, or provide an alternative route through or around the Frog Pond Wetland Preserve.

Response IND 55.7

The commenter states that the trail could be routed on a boardwalk along SR 218, then along and under General Jim Moore Boulevard.

The alternative described by the commenter has been incorporated into the Final EIR as Alternative 5, South of Frog Pond Caltrans Right-of-Way Alignment. Refer to Topical Response A for a summary of Alternative 5, and to Section 6, *Alternatives*, of this Final EIR for a full description and analysis of this alternative.

FORTAG Project EIR

Draft EIR Public Meeting Notes

December 12, 2019

Meeting 1: Oldemeyer Center, 986 Hilby Avenue, Seaside

Comments on Draft EIR: Public Meeting Verbal Comments

Jim Vanderzwaan: The commenter raised concerns about the trail going through Work Park, Angelus Way, and Frog Pond, and concerns about bringing people in to the residential area. The commenter contends that Frog Pond is not a park, but a nature preserve, and is intended for neighborhood use, not a tourism site, nor should it be used at night. According to the commenter, Frog Pond is a unique entity and is the primary concern regarding project impacts. The project could cause impacts to frogs and other wildlife. The northern alternative through Frog Pond is not feasible from the commenter's perspective. There is fire fuel in the preserve that could easily create a large fire caused by trail users. The trail could approach Frog Pond, but running the trail through Frog Pond is not acceptable.

IND 56.1

The commenter points out that this region is already served by the Coastal Recreation Trail, and that Frog Pond is 140 feet above sea level. On General Jim Moore Boulevard, the elevation varies and not many people would want to traverse the entire proposed trail at once. The commenter suggests that, instead of making a complete circuit, a separate staging area along General Jim Moore Boulevard could be installed, including a parking area. A full circuit route for the trail is not necessary because trail users would not use the entire trail on one trip.

IND 56.2

The commenter additionally states that the PG&E route is viable and would provide a safe route; a boardwalk route that avoids Frog Pond could also be acceptable. Frog Pond should either be bypassed or avoided. Excessive foot traffic through Frog Pond could spoil the habitat.

IND 56.3

Don Gruber: The commenter read aloud from a comment letter that is included in the EIR Response to Comments as Letter IND 55.

IND 56.4

Letter IND 56

COMMENTER: Summarized verbal comments from Draft EIR Public Meeting in Seaside

DATE: December 12, 2019

Response IND 56.1

The commenter described concerns about routing the trail through Work Park, Angelus Way, the Frog Pond, and residential areas. The commenter states that the Frog Pond is a preserve, not a park. The commenter describes concerns regarding fire hazards and impacts to wildlife.

The commenter's concerns regarding the trail alignment in Del Rey Oaks are noted. Note that no physical improvements are proposed on Angelus Way other than signage. Impacts such as traffic and noise that could impact the residential community were determined to be less than significant.

Please refer to Topical Response A. As described therein, the Frog Pond Wetland Preserve is a public park managed by the Monterey Peninsula Regional Park District (MPRPD). FORTAG would continue public use of the preserve, making it more accessible consistent with MPRPD's vision for their preserves.

For a discussion of wildfire hazards at the Frog Pond, refer to Section 4.17, *Wildfire*, of the EIR. As discussed under Impact WFR-2, FORTAG would not exacerbate wildfire risks with adherence to applicable firebreak maintenance standards. In addition, the Frog Pond is readily accessible by emergency and first responders through existing road networks. As described in Topical Response A, safety for residents around the Frog Pond Wetland Preserve would not decrease as a result of the FORTAG project.

The commenter's preference for an alternative that avoids the Frog Pond is noted and herewith shared with TAMC decision makers for consideration.

Response IND 56.2

The commenter notes the varied elevation around the Frog Pond. The commenter states that most trail users would not use the entire trail in a single trip, and that therefore a fully connected circuit is not necessary.

The commenter's concern regarding elevation is noted. As listed in Section 2.3, *Project Purpose and Objectives*, the project's objectives include the goal of maintaining gentle grades. As stated in Section 2.4.2, *Trail Design*, FORTAG would maintain gentle grades, meeting Americans with Disabilities Act (ADA) requirements for Class I bike paths throughout the entirety of the off-street portion of the trail (approximately 99 percent of the total trail length). The trail accessibility standards include requirements for a firm and stable trail surface and a maximum grade of 12 percent.

The commenter's opinion that a full circuit route is not needed for the project is noted and herewith shared with TAMC decision makers for consideration.

Response IND 56.3

The commenter states that the project alternative utilizing the PG&E easement is viable. The commenter states that the trail route should avoid the Frog Pond.

The commenter's suggestion is similar to Alternative 2, which would eliminate the Canyon Del Rey/SR 218 segment and replace the segment with an alignment that would follow the PG&E easement on Plumas Avenue in the City of Seaside from Fremont Boulevard on the west to General Jim Moore Boulevard on the east. For additional detail on this alternative alignment and the associated impacts, please refer to Section 6, *Alternatives*.

The commenter's preference that the trail avoids the Frog Pond is noted and herewith shared with TAMC decision makers for consideration.

Response IND 56.4

The commenter read aloud from a comment letter that is included as Letter IND 55.

Please refer to Letter IND 55 and Responses IND 55.1 through IND 55.7 above.

FORTAG Project EIR Draft EIR Public Meeting Notes

Letter IND 57

December 12, 2019

Meeting 2: Marina Library, 188 Seaside Circle, Marina

Comments on Draft EIR: Public Meeting Verbal Comments

- A commenter stated that any alternative that keeps bikes on roadways would be a poor alternative; the trail should not increase traffic exposure of pedestrians and bicyclists. | IND 57.1
- Several commenters expressed support of the project. One commenter encouraged allowing access for electric bikes. | IND 57.2
- A commenter stated that the northern alternative through Frog Pond would be troublesome because it would be expensive and in proximity to houses; the southern option is preferable because there is already a suitable trail surface there. | IND 57.3

Letter IND 57

COMMENTER: Summarized verbal comments from Draft EIR Public Meeting in Marina

DATE: December 12, 2019

Response IND 57.1

The commenter expresses a preference for trail routes that separate pedestrians and cyclists from motor vehicle traffic.

The comment is noted. The majority of the trail would be fully separated from a roadway. As described in Section 2.4.2, *Trail Design*, of the EIR, approximately 2,000 feet of the 28-mile trail would be on existing paved roadways.

Response IND 57.2

Several commenters express support for the project overall. One commenter expresses support for allowing electric bikes on the trail.

The commenters' support is noted. As described in Section 2.5.2, *Electric Bicycles*, electric bikes are allowed on any paved surface on which a regular bike is allowed.

Response IND 57.3

The commenter states that the northern alternative through the Frog Pond would be troublesome because it would be expensive and in proximity to residences. The commenter expresses a preference for the southern option through the Frog Pond, utilizing the existing path.

The commenter's preference for the proposed project rather than the Frog Pond Wetland Preserve Northerly Alignment (Alternative 4) is noted. Please refer to Master Response A for a discussion of project impacts to the Frog Pond Wetland Preserve and alternatives that would avoid or reduce impacts to this area.

This page intentionally left blank.

Transportation Agency for Monterey County

55-B Plaza Circle, Salinas CA 93901 / (831) 775-0903 / info@tamcmonterey.org

NOTICE OF PREPARATION AND SCOPING MEETING

NOTICE IS HEREBY GIVEN that the Transportation Agency for Monterey County (TAMC) will serve as the Lead Agency, consistent with Section 15020 and 15021 of the California Environmental Quality Act (CEQA), in preparing an Environmental Impact Report (EIR) for the proposed **Fort Ord Regional Trail & Greenway (FORTAG)** project (proposed project or FORTAG trail). TAMC is requesting your input on the scope and content of the environmental issues and alternatives to be evaluated in the EIR. Responsible agencies may need to use the EIR to be prepared by TAMC when considering permits or other approvals for the project, and trustee agencies should plan to review and comment on the EIR with respect to trust resources within their jurisdiction.

PROJECT LOCATION: The proposed project consists primarily of an approximately 27-mile-long trail in northwestern Monterey County, including the preferred alignment and spur trails shown in Figure 1. Several optional alignments are also being considered, which total approximately 11.6 miles. The FORTAG trail would traverse the cities of Monterey, Del Rey Oaks, Seaside, and Marina, as well as unincorporated Monterey County and areas under the jurisdiction of California State University Monterey Bay (CSUMB), the Fort Ord Reuse Authority, the Army, Caltrans, and the Monterey Peninsula Regional Park District. The FORTAG trail would connect to the existing Monterey Bay Scenic Coastal Trail under the jurisdiction of State Parks.

PUBLIC REVIEW PERIOD: This NOP is available for public review and comment pursuant to California Code of Regulations, Title 14, Section 15082(b). The 32-day public comment period, during which time TAMC will receive comments on the NOP for the FORTAG EIR, begins June 13, 2019 and ends on July 15, 2019. Comments should be sent to the address provided at the end of this notice.

PROJECT DESCRIPTION: The intended purposes of the FORTAG trail are to: connect people to open space from their homes, workplaces, and hospitality bases; connect core habitat areas; facilitate social interaction between the former Fort Ord, Monterey Peninsula, and the Salinas Valley communities; and function as an artery for non-vehicular travel for commuting and from which to launch numerous other recreational activities. The trail is intended to be a pleasant and visually obvious route that invites safe and accessible use by families, pedestrians, commuter cyclists, and recreational cyclists of all physical abilities.

The proposed FORTAG trail alignment includes approximately 27 miles of new paved trail, primarily on the inland side of State Route 1 (SR 1) (Figure 1). The FORTAG trail would connect with the existing Monterey Bay Coastal Recreation Trail at several locations on the coastal side of SR 1, but there would be no improvements to the coastal trail as part of the proposed project. The FORTAG trail would primarily consist of three loops – a northern, central, and southern loop – that roughly encircle the City of Marina, the CSUMB campus, and the City of Seaside, respectively. On the north side of South Boundary Road, the trail would extend east to Rancho Saucito in Monterey and link to bike facilities in the Ryan Ranch Business Park. The proposed trail alignment also includes several spurs (included in the 27-mile length) that extend from the three loops to connect with existing bicycle/pedestrian infrastructure. Prominent spurs are intended to connect neighborhoods to the trail at Broadway Avenue/General Jim Moore Boulevard and Kimball Avenue/General Jim Moore Boulevard in Seaside; Plumas Avenue and Carlton Drive in Seaside and Del Rey Oaks. The preferred alignment would also connect to the planned North Fremont Street bicycle and pedestrian improvements in Monterey. Optional alignments are

also shown in certain areas, which may be pursued as a substitute for the preferred alignment in those locations.

The proposed trail alignment would cross public roadways in several locations. Most of these crossings would consist of at-grade crossings. In some areas, several design options are being considered for each crossing, including: an undercrossing or roundabout at the intersection of 2nd Avenue and 8th Street along the northern end of the central loop; either an at-grade crossing or roundabout at 2nd Avenue and Divarty Street, at the southern end of the central loop; and an undercrossing, roundabout, or at-grade crossing at SR 218 near Frog Pond, along the southern end of the southern loop. The alignment would cross SR 1 in two locations: at 9th Street and at 1st Street/Divarty Street, both generally west of the CSUMB campus. At 9th Street the trail would utilize an existing SR 1 freeway overcrossing; at 1st Street/Divarty Street the trail would utilize an existing SR 1 undercrossing. An undercrossing is also proposed beneath General Jim Moore Boulevard north of SR 218/Canyon Del Rey Boulevard. An undercrossing is proposed to cross Reservation Road at Inter Garrison Road. A new traffic signal is proposed on Del Monte Avenue between English Avenue and SR 218 to connect the FORTAG trail to the Monterey Bay Scenic Coastal Trail. The proposed project includes two new bicycle/pedestrian bridges: one over Blanco Road, between the Marina Airport and Salinas River; and one over Imjin Road between Imjin Parkway and 8th Street. At-grade street crossings may modify roadway and lane alignments and construct medians, curb extensions, warning devices, traffic control devices, and changes to signing and striping that enhance bike and pedestrian crossing safety.

The FORTAG trail would accommodate pedestrians and bicyclists of all abilities, and equestrians in some segments. The majority of the trail would be 12-foot wide paved path with an unpaved two-foot-wide shoulder on both sides. Approximately 2,000 feet of the trail would be on existing paved roadways in two locations: in Del Rey Oaks on Angelus Way between Rosita Road and Del Rey Gardens; and on Beach Road between Del Monte Boulevard and De Forest Road in Marina. In the Frog Pond area of Del Rey Oaks, the proposed trail width would be reduced to eight feet, and decomposed granite would be used in lieu of pavement. Where space allows, the trail would be surrounded by an open space buffer (greenway) on both sides. Portions of the greenway would support unpaved paths for use by hikers, mountain bikers, equestrians, and naturalists. Fencing would be added only where necessary to separate trail users from conflicting vehicle traffic or from equestrian use on the greenway. Fencing may also be used to protect habitats with sensitive species or to channelize bike riders and pedestrians in locations where the trail is adjacent to private property and access control is required. Retaining walls may be needed to retain slopes at certain locations. Trail lighting is anticipated to be used at conflict points with vehicular travel, such as street crossings, and at locations where lighting would aid crime prevention. In open space areas, trail lighting is intended to be at levels that respect wildlife and the natural setting.

PROJECT ALTERNATIVES: As required by CEQA, TAMC will consider project alternatives, which must meet most of the project objectives while avoiding or substantially lessening significant environmental impacts of the proposed project. As part of this scoping process, TAMC is soliciting input from agencies and the public on alternatives that should be considered for evaluation within the alternatives section of the EIR. Comments regarding alternatives should include a clear narrative and graphic description to the extent possible. Comments on this subject will be most helpful if they include the author's thoughts regarding how well they might meet the project purpose (described above) and reduce environmental impacts.

PROBABLE ENVIRONMENTAL EFFECTS: The EIR will address the potential physical environmental effects of the proposed project for each of the environmental topics outlined in the CEQA Guidelines, Appendix G. The EIR will also address the cumulative impacts resulting from other past, present and reasonably foreseeable future projects. As of the date of this NOP and based on currently available information, it is anticipated that the proposed project may have potentially significant impacts in connection with Aesthetics, Biological Resources,

Cultural Resources, Hydrology and Water Quality, Hazardous Materials, Geology and Soils, Land Use, Public Services, and Traffic.

PUBLIC SCOPING MEETING: Pursuant to the public participation goals of CEQA, as set forth in particular in Public Resources Code Section 21083.9, subdivision (a), TAMC, in its role as Lead Agency, will hold two public scoping meetings to provide an opportunity for the public and representatives of public agencies to address the scope of the Environmental Impact Report. Both Scoping Meetings are scheduled for Thursday, June 27, at the following times and locations:

Thursday, June 27, 2:00-4:00 p.m.
Oldemeyer Center, Blackhorse Meeting Room
986 Hilby Avenue
Seaside, California 93955

Thursday, June 27, 6:00-8:00 p.m.
Marina Library Meeting Room
188 Seaside Circle
Marina, California 93933

COMMENTING ON THE SCOPE OF THE EIR. TAMC welcomes agency and public input regarding environmental factors potentially affected (listed above) and project alternatives to be considered for evaluation. All written comments will be considered and must be submitted by 5:00 PM on Monday, July 15, 2019, to TAMC at:

Dear Mr. Deal:

**COMMENTS FOR THE NOTICE OF PREPARATION (NOP) – FORT ORD REGIONAL TRAIL
AND GREENWAY PROJECT, MONTEREY COUNTY, CA**

1. Caltrans supports local projects that are consistent with State planning priorities intended to promote equity, strengthen the economy, protect the environment, and promote public health and safety. We accomplish this by working with local jurisdictions to achieve a shared vision of how the transportation system should and can accommodate interregional and local travel and development. Projects that support smart growth principles which include improvements to pedestrian, bicycle, and transit infrastructure (or other key Transportation Demand Strategies) are supported by Caltrans and are consistent with our mission, vision, and goals.
2. Please be aware that if any work is completed in the State's right-of-way it will require an encroachment permit from Caltrans and must be done to our engineering and environmental standards, and at no cost to the State. The conditions of approval and the requirements for the encroachment permit are issued at the sole discretion of the Permits Office, and nothing in this letter shall be implied as limiting those future conditioned and requirements. For more information regarding the encroachment permit process, please visit our Encroachment Permit Website at: <http://www.dot.ca.gov/trafficops/ep/index.html>.

Thank you for the opportunity to review and comment on the proposed project. If you have any questions, or need further clarification on items discussed above, please contact me at (805) 549-3157 or email christopher.bjornstad@dot.ca.gov.

Sincerely,

A handwritten signature in blue ink that reads "Chris Bjornstad".

Subject: RE: FORTAG Comments

If the city is developing the parcel, which we understand it will, then opening this would be to the benefit of that development by providing access to the park unit. Funneling all pedestrian and bike traffic through the main underpass will just place people in more close contact with vehicles. The pedestrian underpass would give a degree of separation between cars and pedestrians/bikes. Since we don't own this ease parcel any longer it really would be up to the City. My comment was for FORTAG to talk to the City about using this underpass as part of their FORTAG trail system. WE own the western paved trail section leading up to it so we would take care of that section.

Is the undercrossing a feature that would benefit the State Parks future development? If so, are there any steps being undertaken to open the tunnel?

Thank you
Rick

>>> "Bachman, Stephen@Parks" <Stephen.Bachman@parks.ca.gov> 7/3/2019 3:16 PM >>>
I believe this is the section of paved trail leading down to the undercrossing that is about 120 feet south of the First Street Caltrans undercrossing. It is overgrown and if opened will need to be trimmed to get the vegetation off of the paved surface.

Hi Steve,

We captured your comment at the scoping meeting, but your email is much appreciated. The tunnel evaluation will be added to the scope of the EIR and discussions will occur with Caltrans and the City of Seaside.

Much appreciated! --- Rich

Subject: FORTAG Comments

Hi Rich,

The comment I made at the meeting is:

FORTAG should contact Caltrans about providing dedicated public pedestrian and bike access through the underpass 120 feet to the south of the First Street Caltrans underpass. The City of Seaside should also be contacted to trim the paved trail leading down to this undercrossing. By providing this additional underpass access it would provide separation between the vehicle underpass.

Thanks

Subject: FROG POND BIKES

Hi, Rich,

As I expressed at the TAMC/FORTAG meeting at the park in Del Rey Oaks a couple of months ago, I am solidly opposed to routing of bikes through the Frog Pond. It would absolutely negatively impact the environment there, diminishing life for the many creatures who live there, and for the many families and small children who scamper unwarily on its trails.

While supporting the bike trails in general, routing through the Frog Pond would be a major negative. Please find another route.

RE: SCH# 2019060053 Fort Ord Regional Trail and Greenway Project, Monterey County

Dear Mr. Deal

The Native American Heritage Commission (NAHC) has received the Notice of Preparation (NOP), Draft Environmental Impact Report (DEIR) or Early Consultation for the project referenced above. The California Environmental Quality Act (CEQA) (Pub. Resources Code §21000 et seq.), specifically Public Resources Code §21084.1, states that a project that may cause a substantial adverse change in the significance of a historical resource, is a project that may have a significant effect on the environment. (Pub. Resources Code § 21084.1; Cal. Code Regs., tit.14, §15064.5 (b) (CEQA Guidelines §15064.5 (b)). If there is substantial evidence, in light of the whole record before a lead agency, that a project may have a significant effect on the environment, an Environmental Impact Report (EIR) shall be prepared. (Pub. Resources Code §21080 (d); Cal. Code Regs., tit. 14, § 5064 subd.(a)(1) (CEQA Guidelines §15064 (a)(1)). In order to determine whether a project will cause a substantial adverse change in the significance of a historical resource, a lead agency will need to determine whether there are historical resources within the area of potential effect (APE).

CEQA was amended significantly in 2014. Assembly Bill 52 (Gatto, Chapter 532, Statutes of 2014) (AB 52) amended CEQA to create a separate category of cultural resources, "tribal cultural resources" (Pub. Resources Code §21074) and provides that a project with an effect that may cause a substantial adverse change in the significance of a tribal cultural resource is a project that may have a significant effect on the environment. (Pub. Resources Code §21084.2). Public agencies shall, when feasible, avoid damaging effects to any tribal cultural resource. (Pub. Resources Code §21084.3 (a)). **AB 52 applies to any project for which a notice of preparation, a notice of negative declaration, or a mitigated negative declaration is filed on or after July 1, 2015.** If your project involves the adoption of or amendment to a general plan or a specific plan, or the designation or proposed designation of open space, on or after March 1, 2005, it may also be subject to Senate Bill 18 (Burton, Chapter 905, Statutes of 2004) (SB 18). **Both SB 18 and AB 52 have tribal consultation requirements.** If your project is also subject to the federal National Environmental Policy Act (42 U.S.C. § 4321 et seq.) (NEPA), the tribal consultation requirements of Section 106 of the National Historic Preservation Act of 1966 (154 U.S.C. 300101, 36 C.F.R. §800 et seq.) may also apply.

The NAHC recommends consultation with California Native American tribes that are traditionally and culturally affiliated with the geographic area of your proposed project as early as possible in order to avoid inadvertent discoveries of Native American human remains and best protect tribal cultural resources. Below is a brief summary of portions of AB 52 and SB 18 as well as the NAHC's recommendations for conducting cultural resources assessments.

Consult your legal counsel about compliance with AB 52 and SB 18 as well as compliance with any other applicable laws.

AB 52

AB 52 has added to CEQA the additional requirements listed below, along with many other requirements:

1. Fourteen Day Period to Provide Notice of Completion of an Application/Decision to Undertake a Project: Within fourteen (14) days of determining that an application for a project is complete or of a decision by a public agency to undertake a project, a lead agency shall provide formal notification to a designated contact of, or tribal representative of, traditionally and culturally affiliated California Native American tribes that have requested notice, to be accomplished by at least one written notice that includes:
 - a. A brief description of the project.
 - b. The lead agency contact information.
 - c. Notification that the California Native American tribe has 30 days to request consultation. (Pub. Resources Code §21080.3.1 (d)).
 - d. A "California Native American tribe" is defined as a Native American tribe located in California that is on the contact list maintained by the NAHC for the purposes of Chapter 905 of Statutes of 2004 (SB 18). (Pub. Resources Code §21073).
2. Begin Consultation Within 30 Days of Receiving a Tribe's Request for Consultation and Before Releasing a Negative Declaration, Mitigated Negative Declaration, or Environmental Impact Report: A lead agency shall begin the consultation process within 30 days of receiving a request for consultation from a California Native American tribe that is traditionally and culturally affiliated with the geographic area of the proposed project. (Pub. Resources Code §21080.3.1, subds. (d) and (e)) and prior to the release of a negative declaration, mitigated negative declaration or Environmental Impact Report. (Pub. Resources Code §21080.3.1(b)).
 - a. For purposes of AB 52, "consultation shall have the same meaning as provided in Gov. Code §65352.4 (SB 18). (Pub. Resources Code §21080.3.1 (b)).
3. Mandatory Topics of Consultation If Requested by a Tribe: The following topics of consultation, if a tribe requests to discuss them, are mandatory topics of consultation:
 - a. Alternatives to the project.
 - b. Recommended mitigation measures.
 - c. Significant effects. (Pub. Resources Code §21080.3.2 (a)).
4. Discretionary Topics of Consultation: The following topics are discretionary topics of consultation:
 - a. Type of environmental review necessary.
 - b. Significance of the tribal cultural resources.
 - c. Significance of the project's impacts on tribal cultural resources.
 - d. If necessary, project alternatives or appropriate measures for preservation or mitigation that the tribe may recommend to the lead agency. (Pub. Resources Code §21080.3.2 (a)).
5. Confidentiality of Information Submitted by a Tribe During the Environmental Review Process: With some exceptions, any information, including but not limited to, the location, description, and use of tribal cultural resources submitted by a California Native American tribe during the environmental review process shall not be included in the environmental document or otherwise disclosed by the lead agency or any other public agency to the public, consistent with Government Code §6254 (r) and §6254.10. Any information submitted by a California Native American tribe during the consultation or environmental review process shall be published in a confidential appendix to the environmental document unless the tribe that provided the information consents, in writing, to the disclosure of some or all of the information to the public. (Pub. Resources Code §21082.3 (c)(1)).
6. Discussion of Impacts to Tribal Cultural Resources in the Environmental Document: If a project may have a significant impact on a tribal cultural resource, the lead agency's environmental document shall discuss both of the following:
 - a. Whether the proposed project has a significant impact on an identified tribal cultural resource.
 - b. Whether feasible alternatives or mitigation measures, including those measures that may be agreed to pursuant to Public Resources Code §21082.3, subdivision (a), avoid or substantially lessen the impact on the identified tribal cultural resource. (Pub. Resources Code §21082.3 (b)).

7. Conclusion of Consultation: Consultation with a tribe shall be considered concluded when either of the following occurs:
 - a. The parties agree to measures to mitigate or avoid a significant effect, if a significant effect exists, on a tribal cultural resource; or
 - b. A party, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached. (Pub. Resources Code §21080.3.2 (b)).
8. Recommending Mitigation Measures Agreed Upon in Consultation in the Environmental Document: Any mitigation measures agreed upon in the consultation conducted pursuant to Public Resources Code §21080.3.2 shall be recommended for inclusion in the environmental document and in an adopted mitigation monitoring and reporting program, if determined to avoid or lessen the impact pursuant to Public Resources Code §21082.3, subdivision (b), paragraph 2, and shall be fully enforceable. (Pub. Resources Code §21082.3 (a)).
9. Required Consideration of Feasible Mitigation: If mitigation measures recommended by the staff of the lead agency as a result of the consultation process are not included in the environmental document or if there are no agreed upon mitigation measures at the conclusion of consultation, or if consultation does not occur, and if substantial evidence demonstrates that a project will cause a significant effect to a tribal cultural resource, the lead agency shall consider feasible mitigation pursuant to Public Resources Code §21084.3 (b). (Pub. Resources Code §21082.3 (e)).
10. Examples of Mitigation Measures That, If Feasible, May Be Considered to Avoid or Minimize Significant Adverse Impacts to Tribal Cultural Resources:
 - a. Avoidance and preservation of the resources in place, including, but not limited to:
 - i. Planning and construction to avoid the resources and protect the cultural and natural context.
 - ii. Planning greenspace, parks, or other open space, to incorporate the resources with culturally appropriate protection and management criteria.
 - b. Treating the resource with culturally appropriate dignity, taking into account the tribal cultural values and meaning of the resource, including, but not limited to, the following:
 - i. Protecting the cultural character and integrity of the resource.
 - ii. Protecting the traditional use of the resource.
 - iii. Protecting the confidentiality of the resource.
 - c. Permanent conservation easements or other interests in real property, with culturally appropriate management criteria for the purposes of preserving or utilizing the resources or places.
 - d. Protecting the resource. (Pub. Resource Code §21084.3 (b)).
 - e. Please note that a federally recognized California Native American tribe or a non-federally recognized California Native American tribe that is on the contact list maintained by the NAHC to protect a California prehistoric, archaeological, cultural, spiritual, or ceremonial place may acquire and hold conservation easements if the conservation easement is voluntarily conveyed. (Civ. Code §815.3 (c)).
 - f. Please note that it is the policy of the state that Native American remains and associated grave artifacts shall be repatriated. (Pub. Resources Code §5097.991).
11. Prerequisites for Certifying an Environmental Impact Report or Adopting a Mitigated Negative Declaration or Negative Declaration with a Significant Impact on an Identified Tribal Cultural Resource: An Environmental Impact Report may not be certified, nor may a mitigated negative declaration or a negative declaration be adopted unless one of the following occurs:
 - a. The consultation process between the tribes and the lead agency has occurred as provided in Public Resources Code §21080.3.1 and §21080.3.2 and concluded pursuant to Public Resources Code §21080.3.2.
 - b. The tribe that requested consultation failed to provide comments to the lead agency or otherwise failed to engage in the consultation process.
 - c. The lead agency provided notice of the project to the tribe in compliance with Public Resources Code §21080.3.1 (d) and the tribe failed to request consultation within 30 days. (Pub. Resources Code §21082.3 (d)).

The NAHC's PowerPoint presentation titled, "Tribal Consultation Under AB 52: Requirements and Best Practices" may be found online at: http://nahc.ca.gov/wp-content/uploads/2015/10/AB52TribalConsultation_CalEPAPDF.pdf

SB 18

SB 18 applies to local governments and requires local governments to contact, provide notice to, refer plans to, and consult with tribes prior to the adoption or amendment of a general plan or a specific plan, or the designation of open space. (Gov. Code §65352.3). Local governments should consult the Governor's Office of Planning and Research's "Tribal Consultation Guidelines," which can be found online at: https://www.opr.ca.gov/docs/09_14_05_Updated_Guidelines_922.pdf

Some of SB 18's provisions include:

1. **Tribal Consultation:** If a local government considers a proposal to adopt or amend a general plan or a specific plan, or to designate open space it is required to contact the appropriate tribes identified by the NAHC by requesting a "Tribal Consultation List." If a tribe, once contacted, requests consultation the local government must consult with the tribe on the plan proposal. **A tribe has 90 days from the date of receipt of notification to request consultation unless a shorter timeframe has been agreed to by the tribe.** (Gov. Code §65352.3 (a)(2)).
2. **No Statutory Time Limit on SB 18 Tribal Consultation.** There is no statutory time limit on SB 18 tribal consultation.
3. **Confidentiality:** Consistent with the guidelines developed and adopted by the Office of Planning and Research pursuant to Gov. Code §65040.2, the city or county shall protect the confidentiality of the information concerning the specific identity, location, character, and use of places, features and objects described in Public Resources Code §5097.9 and §5097.993 that are within the city's or county's jurisdiction. (Gov. Code §65352.3 (b)).
4. **Conclusion of SB 18 Tribal Consultation:** Consultation should be concluded at the point in which:
 - a. The parties to the consultation come to a mutual agreement concerning the appropriate measures for preservation or mitigation; or
 - b. Either the local government or the tribe, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached concerning the appropriate measures of preservation or mitigation. (Tribal Consultation Guidelines, Governor's Office of Planning and Research (2005) at p. 18).

Agencies should be aware that neither AB 52 nor SB 18 precludes agencies from initiating tribal consultation with tribes that are traditionally and culturally affiliated with their jurisdictions before the timeframes provided in AB 52 and SB 18. For that reason, we urge you to continue to request Native American Tribal Contact Lists and "Sacred Lands File" searches from the NAHC. The request forms can be found online at: <http://nahc.ca.gov/resources/forms/>

NAHC Recommendations for Cultural Resources Assessments

To adequately assess the existence and significance of tribal cultural resources and plan for avoidance, preservation in place, or barring both, mitigation of project-related impacts to tribal cultural resources, the NAHC recommends the following actions:

1. Contact the appropriate regional California Historical Research Information System (CHRIS) Center (http://ohp.parks.ca.gov/?page_id=1068) for an archaeological records search. The records search will determine:
 - a. If part or all of the APE has been previously surveyed for cultural resources.
 - b. If any known cultural resources have already been recorded on or adjacent to the APE.
 - c. If the probability is low, moderate, or high that cultural resources are located in the APE.
 - d. If a survey is required to determine whether previously unrecorded cultural resources are present.
2. If an archaeological inventory survey is required, the final stage is the preparation of a professional report detailing the findings and recommendations of the records search and field survey.
 - a. The final report containing site forms, site significance, and mitigation measures should be submitted immediately to the planning department. All information regarding site locations, Native American human remains, and associated funerary objects should be in a separate confidential addendum and not be made available for public disclosure.
 - b. The final written report should be submitted within 3 months after work has been completed to the appropriate regional CHRIS center.

3. Contact the NAHC for:
 - a. A Sacred Lands File search. Remember that tribes do not always record their sacred sites in the Sacred Lands File, nor are they required to do so. A Sacred Lands File search is not a substitute for consultation with tribes that are traditionally and culturally affiliated with the geographic area of the project's APE.
 - b. A Native American Tribal Consultation List of appropriate tribes for consultation concerning the project site and to assist in planning for avoidance, preservation in place, or, failing both, mitigation measures.
4. Remember that the lack of surface evidence of archaeological resources (including tribal cultural resources) does not preclude their subsurface existence.
 - a. Lead agencies should include in their mitigation and monitoring reporting program plan provisions for the identification and evaluation of inadvertently discovered archaeological resources per Cal. Code Regs., tit. 14, §15064.5(f) (CEQA Guidelines §15064.5(f)). In areas of identified archaeological sensitivity, a certified archaeologist and a culturally affiliated Native American with knowledge of cultural resources should monitor all ground-disturbing activities.
 - b. Lead agencies should include in their mitigation and monitoring reporting program plans provisions for the disposition of recovered cultural items that are not burial associated in consultation with culturally affiliated Native Americans.
 - c. Lead agencies should include in their mitigation and monitoring reporting program plans provisions for the treatment and disposition of inadvertently discovered Native American human remains. Health and Safety Code §7050.5, Public Resources Code §5097.98, and Cal. Code Regs., tit. 14, §15064.5, subdivisions (d) and (e) (CEQA Guidelines §15064.5, subds. (d) and (e)) address the processes to be followed in the event of an inadvertent discovery of any Native American human remains and associated grave goods in a location other than a dedicated cemetery.

If you have any questions or need additional information, please contact me at my email

Mr. Rich Deal
Principal Engineer
Transportation Agency for Monterey County
55-B Plaza Circle
Salinas, CA 93901

To Mr. Rich Deal:

This letter is regarding the Fort Ord Regional Trail & Greenway (FORTAG) project as directly related to the portion that would run through Del Rey Oaks, specifically along Angelus Way. As stated in previous communication to FORTAG, the Transportation Agency for Monterey County (TAMC) and the City of Del Rey Oaks, it is my steadfast opinion that the trail should run along Canyon Del Rey (SR 218), not a neighborhood, residential street. The quotations below are from "Notice of Preparation and Scoping Meeting" document from TAMC with my comments to follow.

1. "connect people to open space from their homes, workplaces, and hospitality bases . . . and function as an artery for non-vehicular travel for commuting . . ."
 - a. This portion of the trail is proposed to become a commuter route through a residential neighborhood. How is this the best choice as a commuter route when a straight-shot, thoroughfare road, that has minimal change in elevation, already exists as Canyon Del Rey (SR 218)? Del Rey Park is closed from sunrise to sunset which would render this portion of the project useless for work commuters, particularly during the short winter months, if their commute time falls outside of daylight hours.
 - b. Have FORTAG proponents considered the usefulness of a commuter trail for workers in Ryan Ranch Business Park? Where do they commute from? Is it feasible for them to commute via bicycle? This seems like a "build it and they will come" strategy that sounds good and green in theory, but has limited practical use.
2. "intended to be a pleasant and visually obvious route . . ."
 - a. Who is this intended to be pleasant for? It is pleasant to see my neighbors walking with their pets and families through the neighborhood. I do not see a public use trail for commuters, strangers, and tourists as a pleasant addition to our neighborhood. Again, see the recorded statement here that outlines my unpleasant experiences on parts of the Monterey Bay Coastal Recreation Trail: <https://youtu.be/4baCQ4vc8u8>
 - b. We have been reassured by the ALTA firm that the trail could be designed to be as unobtrusive as possible down Angelus Way. This is contrary to the "visually obvious" goals of FORTAG. Is it going to be unobtrusive or visually obvious? It can't be both.

3. "Prominent spurs are intended to connect neighborhoods to the trails . . ."
 - a. No one asked the residents of Angelus Way, en masse, how we felt about this portion of the project until map lines had been drawn, funding had been secured, and decisions were made.
 - b. One of the beautiful things about the Monterey Bay Coastal Recreation Trail is that it allows the public to enjoy the scenery of Monterey Peninsula without intruding in neighborhoods or on private property. Folks are free to use the trail regardless of the hour and the trail is a destination as much as it is a journey. It is intrusive and inconsiderate to assume that our neighborhood wants to be a prominent part of the FORTAG project.
4. "Approximately 2,000 feet of the trail would be on existing paved roadways in two locations: in Del Rey Oaks on Angelus Way between Rosita Road and Del Rey Gardens . . ."
 - a. If the project proceeds as planned, who will be responsible for the public works and maintenance of Angelus Way as it is converted to a trail? Is the City of Del Rey Oaks prepared to shoulder increased public works and maintenance costs as it relates to increased traffic on the existing paved roadway?
 - b. In the past five years, at least 4 sinkholes have opened up along Angelus Way, as well as in the open space between Safeway and Del Rey Gardens. It often coincides with copious rain and the most recent sinkhole cost the City of Del Rey Oaks thousands of dollars to repair. This stretch of paved pathway is built on and near ground that is subject to erosion and shifting. The waterway that runs along Angelus Way eats away at the banks that flank it every single day. This does not seem like the best location to build a trail meant for future generations. I have yet to see a sinkhole open up on SR 218.
5. "Fencing may also be used to protect habitats with sensitive species or to channelize bike riders and pedestrians in locations where the trail is adjacent to private property and access control is required."
 - a. What regard has been given to private property owners along Angelus Way and for safety and liability issues that may arise if people trespass onto said property? Will TAMC and ALTA put fences in front of private property to discourage people from trespassing onto our bridges and driveways? Or will they install unsightly signage as deterrents? Who is liable if someone falls into or is injured by the waterway that runs along the street? With over 30 deaths in recent years, Monastery Beach in Carmel is a prime example of how ineffective signs are at deterring people from engaging in risky behavior.
6. "mountain bikers"
 - a. Some of our county parks, Toro park in particular, face conflict with mountain bikers who cut illegal trails through land, damaging flora and disturbing fauna. Park rangers are

unable to deter it effectively and signage prohibiting such illegal trails has been damaged and defaced. Bikes are prohibited at the Frog Pond. What is the plan to protect the Frog Pond from bikers?

7. "As required by CEQA, TAMC will consider project alternatives, which must meet most of the project objectives while avoiding or substantially lessening significant environmental impacts of the proposed project."
 - a. The suggestion to run the trail along Canyon Del Rey (SR 218) instead of a residential neighborhood addresses the concerns I have about the trail barreling down our neighborhood street. This alternative meets the objectives and has a neutral to positive environmental impact on the project.
 - b. My suggestion has been scoffed at, with project individuals citing Canyon Del Rey as less aesthetically pleasing than a residential street, that it would be too hard to work with CALTRANS, and that the current route favored by TAMC, FORTAG and the City of Del Rey Oaks would be easier to complete the project and just looks better on paper. This translates to me understanding that the aforementioned bureaucratic entities are more interested in spending millions of dollars and achieving their own objectives than listening to and working to address the concerns of their constituents and the residents who would be directly impacted by decisions made in their offices. During the FORTAG demonstration on April 13, 2019, none of the concerns in this letter or my previous letter were listed as "cons" on the ALTA design board for the Angelus Way portion of the trail. The only concern listed on this board was "increased traffic." All the other alternative routes were presented with more cons than pros. This was misleading and it was disappointing to see TAMC and ALTA spin things to favor their preference.

Not addressed in the Notice of Preparation and Scoping Meeting are the issues of homelessness and community safety. There has been a dramatic rise in homelessness in and in close proximity to the Del Rey Oaks community in recent years. Between 2015 and 2017, there has been a 102% increase in homeless in Del Rey Oaks and a 37% increase Seaside. We have homeless encampments on the former Fort Ord property owned by Del Rey Oaks and on the corner of Fremont Boulevard and Canyon Del Rey (SR 218) at Laguna Grande Park. Both have required increased attention from our law enforcement and first responders. Why would you ignore the current homelessness crisis this area faces and build a pathway through a residential neighborhood and park to connect these two encampments? It would be ideal to find shelter for these people in our community, but the reality is that the Peninsula is far from a solution to the situation and it is irresponsible to ignore the ramifications of creating ease of passage through a neighborhood. The cities of Los Angeles and San Francisco have people urinating and defecating in the street with that waste flowing untreated into waterways, infectious disease such as typhoid and hepatitis are spreading rapidly, and there is open drug use. This FORTAG project, while nice in its ideals and appropriate for much of its proposed locations, ignores the issues we have in Del Rey Oaks and Seaside, threatening to bring the sad consequences of homelessness into our neighborhood.

Mr. Rich Deal

I hope that this second communication is taken into serious consideration regarding the FORTAG project and my concerns for the Del Rey Oaks portion that would include Angelus Way.

Sincerely,

A handwritten signature in black ink, appearing to read "Roberta Freeman", with a long horizontal flourish extending to the right.

Subject: Comments on NOP for FORTAG

Dear Rich,

I am writing to provide comments on the FORTAG NOP project. I have two comments/questions I would like addressed:

1. What dates were the biological surveys conducted in 2019? Was this period adequate to capture the phenology of annual rare plants.
2. For the section adjacent to the Fort Ord Natural Reserve, we are concerned about trespass onto the reserve by bikers, hikers, and pets. In previous discussions with FORTAG members we have requested confirmation that the plan includes appropriate fencing along this section in order to eliminate trespass onto the reserve.

Thank you,

Gage

Dear Mr. Deal:

Thank you for the opportunity to comment on the scope of the Environmental Impact Report for the proposed Fort Ord Recreation Trail and Greenway (FORTAG) project. This important recreation and transportation trail facility connects the Fort Ord National Monument to the surrounding residential communities and is a project that we hope to partner with surrounding jurisdictions on.

The stated purpose of the FORTAG project is a trail system that connects people to open space from their homes, workplaces, and hospitality bases; connects core habitat areas; facilitates social interaction between the former Fort Ord, Monterey Peninsula, and the Salinas Valley communities; and functions as an artery for non-vehicular travel for commuting and from which to launch numerous other recreational activities. Because travelers using the trail system for commuting purposes would have different goals and objectives than travelers using the trail system primarily for recreational enjoyment, we encourage planners to model projected use patterns of various segments of route and consider design features (or trail segment rules) that can reduce conflict between users on the same path for different reasons. Commuters on bicycles are likely to desire travelling at higher rates of speed than travelers using the trail for general recreation purposes.

One segment of proposed FORTAG route is adjacent to the Fort Ord National Monument along or near a road that is referred to by the BLM, Army, and local jurisdictions as the “Blue Line Road”. This 15’ wide gravel and natural surfaced road plays an important function by providing maintenance and patrol access along a security fence managed by the Army that restricts unauthorized access into hazardous munitions areas on the National Monument. This roadway also provides access for federal, state and local fire departments to contain wildfires from entering into (or exiting from) the National Monument. Please consider how the FORTAG route alignment will affect access to this important road, or be used in lieu of the road.

The portion of FORTAG route along the western edge of the National Monument in Seaside and Del Rey Oaks traverses parcels identified as “Borderland Parcels” within the *Installation-Wide Multispecies Habitat Management Plan for Former Fort Ord, California (HMP)*. These HMP parcels have the following requirements that should be evaluated within the FORTAG plan:

“FORA or other recipients of the land will either arrange to have existing native habitat managed in an interim period before development, or construct and maintain firebreaks and vehicle barriers to separate developed and developing areas from both interim and permanent habitat areas...A barrier will be installed and maintained along the NRMA (i.e. National Monument) where topography would allow vehicle access. Gates will allow emergency access into the NRMA. Keys to gates will be provided to BLM or other appropriate agencies...Populations of ice plant, scotch broom, and pampass grass will be controlled to avoid spread into the NRMA. To minimize the possibility of fire damage to the NRMA as well as structures on the development parcels, parking lots, greenbelts, or other nonflammable or fire resistant land uses will be located as a buffer between the NRMA and development...”

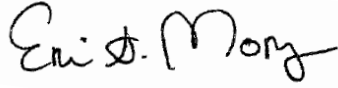

Because the FORTAG within the Borderland Parcel along and/or across the Blue Line Road may be serving multiple functions (i.e. recreation trail, commuter path, fence maintenance access road, firebreak, and habitat corridor), special care needs to be taken with this segment to ensure proper function. The route itself should be constructed to support periodic vehicle use by personnel inspecting and maintaining the security fences, and loaded fire engines that might need to work from the path for fire suppression efforts. The vegetation adjacent to the route should be largely free of noxious weeds and fire-resistant.

Finally, there might be opportunities to provide more direct connections of this trail system to the National Monument and we look forward to working with planners for these opportunities. As currently envisioned, the trail passes by the Jerry Smith Access Trail along Intergarrison Road, but that is one mile away from the National Monument. A consideration would be to use the Jerry Smith Access Trail as a segment to the FORTAG and, by doing so, Watkins Gate Road and

Gigling Road segments could contribute to an existing loop of the non-motorized, paved trail system.

Thanks for your attention to these comments and we look forward to coordinating more. If you have any questions, feel free to contact me at (831)582-2212.

Sincerely,

Subject: Re: Frog Pond - Del Rey Oaks

Thanks Rich for the response. Personally I would describe myself as a bicycle advocate. I like to see the public using this form of transportation as much as possible. During my four years of college, three of those four years were spent using a bicycle for transportation as I did not own a car.

As a Seaside resident since 2009, my family and I currently use the Frog Pond Loop Trail to spend time peacefully walking the 4 foot wide decomposed granite trail, walking the dog, picking berries, looking for birds, etc. The city of Seaside lacks a gem of a nature preserve such as the Frog Pond. Because of its close proximity to our house, we find it a convenient place to relax and take life at a slower pace.

With this being said, I can only imagine the amount of riparian vegetation that would have to be removed in order to construct a "shared use" trail that would be safe enough for a mix of users to use at the same time. I am against any changes to the current trail or the destruction of riparian vegetation that surrounds it for anything other than requirements of the Americans with Disabilities Act. I do understand the importance of incorporating bicycles into the Monterey Bay Area traffic flow, but I do not see bicycles adding value to the peaceful nature of the Frog Pond. Bicyclists can enjoy the current trails by simply locking their bikes to the Hwy 218 wooden fence line and walk the trails on foot.

Sincerely,

Cameron Stormes

On Monday, July 8, 2019, Rich Deal <rich@tamcmonterey.org> wrote:

Hi Cameron Stormes,

The FORTAG project proposes to construct a shared use trail through the Frog Pond and under General Jim Moore Blvd, which would expand the size of the current Frog Pond. The trail does not propose a bike trail around the existing Frog Pond. We are hearing concerns that bikes are unwanted through the Frog Pond from others as well. Your comments opposing the trail will be included in the environmental Impact report. You will also have additional opportunities to voice your opposition when the draft environmental impact report is released for public comment in the fall.

Thank you for your input.

Re: Proposed Fort Ord Regional Trail & Greenway (FORTAG) Project

Greetings,

Fort Ord Reuse Authority's (FORA's) Planning Department has completed a review of the FORTAG Environmental Impact Report (EIR) Notice of Preparation (NOP). We compared it to the Fort Ord Regional Urban Design Guidelines (RUDG) and Volume I and II of the Base Reuse Plan (BRP). Since the FORTAG proposed plan enters and connects Habitat Management Areas (HMAs), we have some comments pertaining to the framing of the FORTAG's purpose, its entry into those areas, and connection between the areas, in light of the Habitat Management Plan and the pending draft Habitat Conservation Plan (FORA, 2019). We share these and other comments below.

We appreciate the potential integration of the FORTAG trail into the Southern Endowment parcel of the CDVA Central California Coast Veterans Cemetery, as a potential fulfillment of Seaside and Monterey County's Recreation policy C-1, "Monterey County/City of Seaside shall establish an oak tree protection program to ensure conservation of existing coastal live oak woodlands in large corridors within a comprehensive open space system. Locate local and regional trails within this system."

We also appreciate the way the FORTAG, unlike prior regional trail planning efforts of the 1970s, includes the sense that trails need not be along roads, exclusively. This is congruent with the BRP's description of Objective F of the Recreation and Open Space Element (Vol. I):

"The extensive system of reserved open space, including local, state, and federally owned recreation lands, habitat management lands, and institutional settings provides a unique opportunity to create a network of trails which can serve as an alternative means of transportation and as recreation, serving the needs of residents, workers, and visitors alike. The potential of the former Fort Ord's major open space attractions as an ecotourism draw will be reinforced by such a system, and the provision of an attractive alternative transportation network will reduce the impact of development on the transportation system."

In many instances, the FORTAG shows continuity with the RUDG and its source material in the BRP. For example, Connectivity objectives "link new neighborhoods with the surrounding cities' development fabric," "create strong physical linkages from villages to CSUMB and other major activity areas," and "connect new residential neighborhoods via continuous streets and/or open space linkages to surrounding neighborhoods

and districts,” and “ensure open space connections link major recreation and open space resources” are all met by the FORTAG plan. FORA staff encourage the plan development to continue on the path of fulfilling these objectives.

Another continuity between the FORTAG and the RUDG is in the Trails objectives. “Establish trail systems for non-motorized transit alternatives to former Fort Ord neighborhoods” is achieved with the trail connecting General Jim Moore Blvd to the CSUMB area (and future Campus Town) and East Garrison. Also, the RUDG objective to “link former Fort Ord trails to regional bike/pedestrian trails wherever possible” is reflected in the NOP with the connection to the existing Monterey Bay Coastal Recreation Trail, and the proposed alignment’s proximity to the edge of BLM’s western portion, where some historic trails will likely be accessible after the Army completes the transfer of the lands to BLM.

There is a component of the RUDG that we recommend you incorporate into the FORTAG. The RUDG includes the measure “trailhead facilities sited for key access points to the Fort Ord National Monument and Fort Ord Dunes State Park and other recreation and natural resource assets.” There was no evidence in the NOP of such facilities along the FORTAG, so FORA staff inquired about it at the Seaside Scoping Meeting on June 27, and was told that there were no facilities planned beyond benches and wayfaring signs. We recommend at least one trailhead facility, including a bathroom, be added to the project particularly along the eastern edge of the southern loop. A trailhead facility, including a bathroom, should also be added to the northern loop, close to the border with the Marina Airport. It may be best to build composting toilets, rather than running water.

As lead agency on the Fort Ord Multispecies HCP, the NOP purpose statement “to connect core habitat areas” was of utmost interest to us at FORA. The April 1997 Habitat Management Plan established a habitat conservation area and corridor system and parcel-specific land use categories and management requirements for all lands on former Fort Ord. The conservation areas were designed through the application of ecological concepts by combining the distributions of the following resources.

- a. Sites supporting high or medium densities of known populations of sand gilia and Monterey spineflower.
- b. Sites supporting high and medium-quality habitat (as defined by the density of buckwheat) or known occurrences of Smith’s blue butterfly.
- c. Sites supporting potential or known coastal nesting habitat for western snowy plover.
- d. Study polygons supporting the highest richness of HMP species (i.e., seven or more of the eighteen HMP species or suitable habitat occurrences).

Resource conservation and management requirements were described and responsible parties for each designated habitat area on the former base were identified in the HMP, and no priority was given to trail connectivity between them. Sensitive sites as described above contributed to the HMA locations. Connectivity is achieved through the close proximity of the areas to each other, including what is now called the Fort Ord National Monument.

The conservation program described in the 1997 HMP provides the basic framework for the conservation strategy of the HCP. In a total of fourteen habitat management areas, the priority is conservation of listed native species and their habitats. Trail access is allowed in some HMAs, but it is not important to the HCP to connect habitat areas by trails.

If the “greenway” element of the project is intended to serve an ecological benefit to the HMA system, is it in the form of allowing a through-fare for native animals? This seems to be the intent of the

underpass at the Frog Pond, and we commend that. However, the purpose statement would be truer to intent if it were to state “connect people to habitat areas,” which Dr. Fred Watson stated in the Scoping Meeting at Oldemeyer Center on June 27, 2019, rather than what is stated in the NOP, “to connect core habitat areas.”

The project’s greenways will increase movement of recreationalists, commuters, and their pets/horses move from disturbed areas into HMAs and between HMAs. This is likely to result in an increase in the spread of invasive non-native species, as seeds and pollen ride on the clothing, boots, tires and fur, as well as in horse feces, to invade new areas. We urge TAMC to fully investigate the increase in non-native invasive species spread to and between HMAs due to the FORTAG, and mitigate the effects by setting up an integrated invasive non-native species control program for the landholding jurisdictions to use in the greenways. Also, we suggest TAMC add information to wayfaring signage about these species and how users can minimize their spread along the routes of the FORTAG.

Thank you for this opportunity to help strengthen the scope of the FORTAG EIR, and suggest alternatives. As we head toward June 30, 2020, we are hopeful that the Plans of TAMC and the underlying land holder jurisdictions will integrate the BRP requirements to the fullest extent. The Planners at FORA remain available to discuss any of the points herein.

Many thanks,

A handwritten signature in blue ink, appearing to read 'Mary Israel', with a stylized, flowing script.

Salinas, CA 93901

Dear Mr. Deal:

Thank you for the opportunity to provide comments on the notice of preparation of an Environmental Impact Report for the proposed Fort Ord Regional Trail & Greenway (FORTAG) project. The notice includes a figure that identifies Preferred Alignment of the proposed FORTAG trails in the vicinity of the Army's ongoing environmental remediation project activities, as well as transferred properties with certain environmental requirements.

Figure 1 shows Preferred Alignment being located along former Fort Ord areas with "borderland development" requirements of *Installation-wide Multispecies Habitat Management Plan for Fort Ord* (HMP; Administrative Record AR number: BW-1787). The requirements include treating invasive weeds along the areas. The actual HMP language reads: "Populations of iceplant, scotch broom, and pampas grass will be controlled on an interim basis and long-term basis in these areas to avoid the spread of these species into the NRMA." The HMP also states that: "Measures will also be taken to reduce potential for erosion in these parcels so as not to affect the NRMA parcel from stormwater runoff that may originate in these parcels." These requirements are also included in deeds to the applicable properties. Please incorporate them in the project evaluation.

Deeds to former Fort Ord properties contain other provisions that should be taken into account during the evaluation. They include:

- Requirements for munitions recognition and safety training and construction support, to be implemented for ground-disturbing activities (applicable to several munitions response sites).
- Reservation by the Army of access to the properties for the purpose of environmental investigation and remediation under Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA).

Specifically, Blue Line Road along the western perimeter of the Impact Area Munitions Response Area (MRA) is used by the Army to access the site and to maintain the perimeter fence system as part of the CERCLA remedy. The Army controls all access into the Impact Area MRA; unauthorized access is prohibited. As the FORTAG project

would bring public uses closer to the restricted Impact Area, the Army would like to work with your agency and Bureau of Land Management to ensure that incidences of unauthorized access into the Impact Area MRA will not be increased.

The Army's munitions response in the Impact Area MRA will continue for several more years. This work includes prescribed burning. Depending on the location of the burn, Blue Line Road will be used as part of primary, secondary or tertiary containment lines. The road must be maintained in a manner that can sustain fire truck and other vehicle loads. In addition, during the prescribed burns, roads and areas adjacent to the Impact Area MRA are subject to closure. Please consider this need in the evaluation of the proposed FORTAG project.

The Fort Ord landfill area is an on-going environmental cleanup site (Operable Unit 2). Additionally, a network of groundwater extraction wells and pipelines, and groundwater monitoring wells, are present at various locations. The Army will work with your agency to identify and resolve any potential conflicts with planned FORTAG trail alignments to avoid impacting the landfill operations or groundwater cleanup programs.

Again, than you for the opportunity to provide comments on the proposed project. We look forward to working with your agency to ensure that the Army's environmental remediation program continues to move forward while supporting the reuse of the former Fort Ord. Please feel free to contact me at (831) 242-7920 if you have any questions.

Sincerely,

A handwritten signature in blue ink that reads "William K. Collins". The signature is written in a cursive style with a stylized "x" at the end of the last name.

Subject: HWY 218 is best for bike lane

Hi Stefania,

I'd like to share what I believe to be best solution for the bike lane project. I also want to address the vital and urgent safety hazard that 218 currently presents.

My elderly next door neighbors property has been crashed into three times that I know of in past 5 years. The danger for car crashing into our property or God forbid, into her, other neighbors who share property line with HWY 218 including my children, my family and I.

The HWY is too fast. We need your help. Please give us stop signs or turnabouts, slower speed and cement barrier should be built to protect us.

In addition, to ensure safety of your residents and quality of life of us on the hillside, it would be very helpful to have a turning lane to get off HWY 218 to Rosita.

I can't tell you how many times I have to completely stop of HWY 218 to turn left on Rosita and a car behind me almost crashes into me or the hillside and me even when I slow down wayyyyy before Rosita.

As for quality of life the sound of flying traffic and screeching brakes and honking is horrific daily. It shakes me up every time I'm outside in the garden or even just have my front door open, worried that a car may come crashing into my home.

Please carefully consider implementing safety measures on HWY 218 to slow it down and have more structured safety flow as a priority.

I am confident that the HWY which already has a bike lane could be made more user friendly and would finally be a safe biking environment at much less expensive proposal of the 22 million to include a tunnel and bike lane parade of strangers rising thru and parking directly in our residents front yards. Not to mention the obvious safety hazards and typical crime illegal actions that statiscally relate and bring down value and integrity of our quiet well sought after community.

Can you please let me know if there is anything this City is willing to do to protect the safety of all persons sharing property line with the high speed HWY 218 and those who loyaly reside here.

I plea and pray for all hearts involved in these life altering decisions to be softened and hear our hearts cry. Please help slow down traffic and protect your quiet residential community.

Thank you kindly in advance for your help in this matter.

T. Foster

Subject: Re: City of Monterey FORTAG EIR Scoping Comments

Dear Rich and Stefania,

Please accept this email as the City of Monterey comments:

1. Consider motion sensor lighting along the entire trail. Keep lighting levels at a pedestrian scale and low during the night. Avoid a significant aesthetic impact.
2. Conduct a biological assessment for the entire trail.
3. Study how trail crossing at Del Monte Avenue/Roberts Lake will interact with IN-N-OUT driveway and adaptive signals.
4. Include and study rest stops, benches, bicycle repair stations, and any other amenities along the trail.
5. On the project map, add a line and label for the portion of the North Fremont Ped & Bike and Project that is almost completed and call it "**Constructed**", and relabel the yellow line that says "Planned" to "**Preferred Alignment**" as shown below.

6. Study a reconstruction of the Fremont/Canyon Del Rey intersection to make the west corner more square, as shown below:

7. Study the safety of underpasses. They might be an aesthetic impact.
8. Study the widening of South Boundary Road to provide a Class IV bicycle and pedestrian facility instead of zigzagging the trail through Monterey's shark-fin property, as shown below. Or study an alternative that does not bisect the shark-fin property.

Thank you,
Fernanda Roveri

Dear Mr. Deal:

**COMMENTS FOR THE NOTICE OF PREPARATION (NOP) – FORT ORD REGIONAL TRAIL
AND GREENWAY PROJECT, MONTEREY COUNTY, CA**

1. Caltrans supports local projects that are consistent with State planning priorities intended to promote equity, strengthen the economy, protect the environment, and promote public health and safety. We accomplish this by working with local jurisdictions to achieve a shared vision of how the transportation system should and can accommodate interregional and local travel and development. Projects that support smart growth principles which include improvements to pedestrian, bicycle, and transit infrastructure (or other key Transportation Demand Strategies) are supported by Caltrans and are consistent with our mission, vision, and goals.
2. Please be aware that if any work is completed in the State's right-of-way it will require an encroachment permit from Caltrans and must be done to our engineering and environmental standards, and at no cost to the State. The conditions of approval and the requirements for the encroachment permit are issued at the sole discretion of the Permits Office, and nothing in this letter shall be implied as limiting those future conditioned and requirements. For more information regarding the encroachment permit process, please visit our Encroachment Permit Website at: <http://www.dot.ca.gov/trafficops/ep/index.html>.

Thank you for the opportunity to review and comment on the proposed project. If you have any questions, or need further clarification on items discussed above, please contact me at (805) 549-3157 or email christopher.bjornstad@dot.ca.gov.

Sincerely,

Subject: Fort Ord Regional Trail and Greenway (Project)
NOTICE OF PREPARATION (NOP)
SCH No.: 2019060053

Dear Mr. Deal:

The California Department of Fish and Wildlife (CDFW) received an NOP for the Project from the Transportation Agency for Monterey County (TAMC) for the above-referenced Project pursuant to the California Environmental Quality Act (CEQA) and CEQA Guidelines.¹

Thank you for the opportunity to provide comments and recommendations regarding those activities involved in the Project that may affect California fish and wildlife. Likewise, we appreciate the opportunity to provide comments regarding those aspects of the Project that CDFW, by law, may be required to carry out or approve through exercise of our own regulatory authority under the Fish and Game Code. Although the comment period for your request has passed, CDFW respectfully requests that the following comments be considered.

CDFW ROLE

CDFW is California's **Trustee Agency** for fish and wildlife resources and holds those resources in trust by statute for all the people of the State (Fish & G. Code, §§ 711.7, subd. (a) & 1802; Pub. Resources Code, § 21070; CEQA Guidelines § 15386, subd. (a)). CDFW, in the trustee capacity, has jurisdiction over the conservation, protection, and management of fish, wildlife, native plants, and habitat necessary for biologically

¹ CEQA is codified in the California Public Resources Code in section 21000 et seq. The "CEQA Guidelines" are found in Title 14 of the California Code of Regulations, commencing with section 15000.

sustainable populations of those species (*Id.*, § 1802). Similarly, for purposes of CEQA, CDFW is charged by law to provide, as available, biological expertise during public agency environmental review efforts, focusing specifically on projects and related activities that have the potential to adversely affect fish and wildlife resources.

CDFW is also submitting comments as a **Responsible Agency** under CEQA (Pub. Resources Code, § 21069; CEQA Guidelines, § 15381). CDFW expects that it may need to exercise regulatory authority as provided by the Fish and Game Code. For example, to the extent implementation of the Project as proposed may result in “take” as defined by State law of any species protected under the California Endangered Species Act (CESA) (Fish & G. Code, § 2050 et seq.), related authorization as provided by the Fish and Game Code will be required.

Nesting Birds: CDFW has jurisdiction over actions with potential to result in the disturbance or destruction of active nest sites or the unauthorized take of birds. Fish and Game Code sections that protect birds, eggs and nests include, sections 3503 (regarding unlawful take, possession or needless destruction of the nest or eggs of any bird), 3503.5 (regarding the take, possession or destruction of any birds-of-prey or their nests or eggs), and 3513 (regarding unlawful take of any migratory nongame bird).

Water Pollution: Pursuant to Fish and Game Code Section 5650, it is unlawful to deposit in, permit to pass into, or place where it can pass into “Waters of the State” any substance or material deleterious to fish, plant life, or bird life, including non-native species. It is possible that without mitigation measures, implementation of the Project could result in pollution of Waters of the State from storm water runoff or construction-related erosion. Potential impacts to the wildlife resources that utilize these watercourses include the following: increased sediment input from road or structure runoff; toxic runoff associated with development activities and implementation; and/or impairment of wildlife movement along riparian corridors. The Regional Water Quality Control Board and United States Army Corps of Engineers (USACE) also have jurisdiction regarding discharge and pollution to Waters of the State.

PROJECT DESCRIPTION SUMMARY

Proponent: Transportation Agency for Monterey County (TAMC).

Objective: The proposed Fort Ord Regional Trail & Greenway (FORTAG) consists primarily of an approximately 27-mile long new paved trail. The goal of the Project is to provide a connection between residential areas, schools, workplaces, regional parks, and City services. In addition to the 27-mile proposed alignment, several optional alignments, totaling 11.6-miles, are also being considered. It will connect the former Fort Ord, Monterey Peninsula, Cal State University Monterey Bay (CSUMB), and the Salinas Valley communities and serve as an artery for non-vehicular travel for commuting and recreational activities. It will also connect to the existing Monterey Bay

Scenic Coastal Trail, under the jurisdiction of State Parks. The FORTAG Project will connect with the Monterey Bay Coastal Recreational Trail at several locations on the coastal side of State Route 1 (SR 1), but there would be no improvements to the coastal trail as part of the proposed project. The FORTAG trail will primarily consist of three loops – a northern, central, and southern loop that roughly encircle the City of Marina, the CSUMB campus, and the City of Seaside; respectively.

The proposed trail alignment will cross public roadways in several locations. Most of these crossings will consist of at-grade crossings. In some areas, several design options are being considered for each crossing including: an undercrossing or roundabout at the intersection of 2nd Avenue and 8th Street along the northern end of the central loop; and an undercrossing, roundabout, or at-grade crossing at SR 218 near Frog Street and at 1st Street/Divarty Street, both generally west of the CSUMB campus. At 9th Street the trail will utilize an existing SR 1 freeway overcrossing; at 1st Street/Divarty Street the trail will utilize an existing SR 1 undercrossing. An undercrossing is also proposed beneath General Jim Moore Boulevard north of SR 218/Canyon Del Rey Boulevard. An undercrossing is proposed to cross Reservation Road at Inter Garrison Road. A new traffic signal is proposed on Del Monte Avenue between English Avenue and State Route 218 (SR 218) to connect the FORTAG trail to the Monterey Bay Scenic Coastal Trail. The proposed Project includes two new bicycle/pedestrian bridges: one over Blanco Road, between the Marina Airport and Salinas River; and one over Imjin Road between Imjin Parkway and 8th Street. At-grade street crossings may modify roadway and lane alignments and construct medians, curb extensions, warning devices, traffic control devices, and changes to signing and striping that enhance bike and pedestrian crossing safety.

The FORTAG trail will accommodate pedestrians and bicyclists, and equestrians in some segments. The majority of the trail will consist of a 12-foot wide paved path with an unpaved two-foot-wide shoulder on both sides. Approximately 2,000 feet of the trail will be on existing paved roadways in two locations: in Del Rey Oaks on Angelus Way between Rosita Road and Del Rey Gardens; and on Beach Road between Del Monte Boulevard and De Forest Road in Marina. In the Frog Pond area of Del Rey Oaks, the proposed trail width will be reduced to 8-feet, and decomposed granite will be used in lieu of pavement. Where space allows, the trail will be surrounded by an open space buffer (greenway) on both sides. Portions of the greenway will support unpaved paths for use by hikers, mountain bikers, equestrians, and naturalists. Fencing will be added only where necessary to separate trail users from conflicting vehicle traffic or from equestrian use on the greenway. Fencing may also be used to protect habitats with sensitive species or to channelize bike riders and pedestrians in locations where the trail is adjacent to private property and access control is required. Retaining walls may be needed to retain slopes at certain locations. Trail lighting is anticipated to be used at conflict points with vehicular travel, such as street crossings, and at locations where lighting would aid crime prevention. In open space areas, trail lighting is intended to be at levels that respect wildlife and the natural setting.

Location: Northwestern Monterey County, on the inland side of SR 1. The FORTAG trail will traverse the cities of Monterey, Del Rey Oaks, Seaside, and Marina, as well as unincorporated Monterey County and areas under the jurisdiction of CSUMB, the Fort Ord Reuse Authority, the Army, Caltrans, and the Monterey Peninsula Regional Parks District.

On the north side of South Boundary Road, the trail will extend east to Rancho Saucito in Monterey and link to bike facilities in the Ryan Ranch Business Park. The proposed trail alignment also includes several spurs (included in the 27-mile length) that extend from the three loops to connect with existing bicycle/pedestrian infrastructure. Prominent spurs are intended to connect neighborhoods to the trail at Broadway Avenue/General Jim Moore Boulevard, and Kimball Avenue/General Jim Moore Boulevard in Seaside; Plumas Avenue and Carlton Drive in Seaside and Del Rey Oaks. The preferred alignment will also connect to the planned North Fremont Street bicycle and pedestrian improvements in Monterey. Optional alignments may also be pursued as a substitute for the preferred alignment in those locations.

Timeframe: Unspecified.

COMMENTS AND RECOMMENDATIONS

CDFW offers the comments and recommendations below to assist TAMC in adequately identifying and/or mitigating the Project's significant, or potentially significant, direct and indirect impacts on fish and wildlife (biological) resources. Editorial comments or other suggestions may also be included to improve the document.

Based on aerial imagery, species occurrence records, and the land cover types that intersect and comprise the project alignment, the Project area is known to and/or has high potential to support numerous special-status species, including CESA-listed species (CDFW 2019, CNPS 2019, UC Davis 2018). Therefore, the Project has the potential to significantly impact these species. Specifically, CDFW is concerned about potential of the Project to significantly impact the State and federally threatened California tiger salamander (*Ambystoma californiense*), the State threatened, federally endangered, and California Rare Plant Ranked (CRPR) 1B.2 Monterey gilia (*Gilia tenuiflora* ssp. *arenaria*), the State endangered and CRPR 1B.1 seaside bird's-beak (*Cordylanthus rigidus* ssp. *littoralis*), the federally threatened and State Species of Special Concern California red-legged frog (*Rana draytonii*); the State Species of Special Concern northern California legless lizard (*Anniella pulchra*), coast horned lizard (*Phrynosoma blainvillii*), western pond turtle (*Emys marmorata*), burrowing owl (*Athene cunicularia*), and American badger (*Taxidea taxus*); and numerous CRPR plant species including, but not limited to, the federally threatened and CRPR 1B.2 Monterey spineflower (*Chorizanthe pungens* var. *pungens*); the CRPR 1B.1 Eastwood's goldenbush (*Ericameria fasciculata*), Pajaro manzanita (*Arctostaphylos pajroensis*), pink Johnny-nip (*Castilleja ambigua* var. *insalutata*), Kellogg's horkelia (*Horkelia cuneata* var.

sericea), Monterey pine (*Pinus radiata*); and the CRPR 1B.2 Hickman's onion (*Allium hickmanii*), Hooker's manzanita (*Arctostaphylos hookeri* ssp. *hookeri*), Jolon clarkia (*Clarkia jolonensis*), northern curly-leaved monardella (*Monardella sinuata* ssp. *nigrescens*), sand-loving wallflower (*Erysimum ammophilum*), sandmat manzanita (*Arctostaphylos pumila*), and Toro manzanita (*Arctostaphylos montereyensis*). Many of these species occur in maritime chaparral, coastal scrub, coastal prairie, and grassland communities which are present within and adjacent to the Project area. In addition, the Salinas Rivers is adjacent to the Project area and is known to support breeding populations of California red-legged frogs (CDFW 2019). Other natural areas where the species mentioned above are known or likely to occur also lie adjacent to the Project area including the Fort Ord Natural Reserve, lands managed by the University of California Natural Reserve System, Fort Ord Dunes State Park, and the Frog Pond Wetland Preserve.

To evaluate impacts of the Project on these species, CDFW recommends that a qualified biologist conduct species-specific focused habitat assessments and, if suitable habitat is present, protocol-level surveys. CDFW further recommends that the results of these surveys be summarized and used to evaluate Project impacts and potential permitting needs in the Project's CEQA document. If results of these surveys indicate significant environmental impacts will occur as a result of Project implementation and cannot be mitigated to less than significant levels, a Mitigated Negative Declaration (MND) would not be appropriate. Further, when an MND is prepared, mitigation measures must be specific and clearly defined and cannot be deferred to a future time. The specifics of mitigation measures may be deferred, provided the lead agency commits to mitigation and establishes performance standards for implementation, when an Environmental Impact Report (EIR) is prepared. Regardless of whether an MND or EIR is prepared, the CEQA document must provide quantifiable and enforceable measures as needed that will reduce impacts to less than significant levels.

I. Environmental Setting and Related Impact

Would the Project have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by CDFW or United States Fish and Wildlife Service (USFWS)?

COMMENT 1: California tiger salamander (CTS)

Issue: CTS are known to occur in the vicinity of the Project area (CDFW 2019). Review of aerial imagery indicates the presence of several wetland features in the Project's vicinity that have the potential to support breeding CTS. In addition, the Project area or its immediate surroundings may support small mammal burrows, a requisite upland habitat feature for CTS.

Specific impact: Without appropriate avoidance and minimization measures for CTS, potential significant impacts associated with the Project's construction include: burrow collapse, inadvertent entrapment, reduced reproductive success, reduction in health and vigor of eggs, larvae and/or young, and direct mortality of individuals. In addition, depending on Project design, the Project has the potential to result in creation of barriers to dispersal.

Evidence impact would be significant: Up to 75% of historic CTS habitat has been lost to development (Shaffer et al. 2013). Loss, degradation, and fragmentation of habitat are among the primary threats to CTS (CDFW 2015, USFWS 2017a). The Project area is within the range of CTS and is both comprised of and bordered by suitable upland habitat. As a result, there is potential for CTS to occupy or colonize the Project area and for the Project to impact CTS.

Recommended Potentially Feasible Mitigation Measure(s) (Regarding Environmental Setting and Related Impact)

To evaluate potential impacts to CTS associated with the Project, CDFW recommends conducting the following evaluation of the Project area and including the following mitigation measures as conditions of Project approval in the Project's CEQA document.

Recommended Mitigation Measure 1: CTS Habitat Assessment

CDFW recommends that a qualified biologist conduct a habitat assessment well in advance of project implementation, to determine if the Project area or its vicinity contains suitable habitat for CTS.

Recommended Mitigation Measure 2: Focused CTS Surveys

If the Project area does contain suitable habitat for CTS, CDFW recommends that a qualified biologist evaluate potential Project-related impacts to CTS prior to ground-disturbing activities using the USFWS's "Interim Guidance on Site Assessment and Field Surveys for Determining Presence or a Negative Finding of the California Tiger Salamander" (2003). CDFW advises that the survey include a 100-foot buffer around the Project area in all areas of wetland and upland habitat that could support CTS.

Recommended Mitigation Measure 3: CTS Avoidance

CDFW advises avoidance for CTS include a minimum 50-foot no disturbance buffer delineated around all small mammal burrows and a minimum 250-foot no disturbance buffer around potential breeding pools within and/or adjacent to the Project area. CDFW also recommends avoiding any impacts that could alter the

hydrology or result in sedimentation of breeding pools. If avoidance is not feasible, consultation with CDFW is warranted to determine if the Project can avoid take.

Recommended Mitigation Measure 4: CTS Take Authorization

If through surveys it is determined that CTS are occupying the Project area and take cannot be avoided, take authorization may be warranted prior to initiating ground-disturbing activities. CDFW is aware that efforts are underway to finalize the Fort Ord Multi-Species Habitat Conservation Plan (HCP) and to secure companion acquisition of a state Incidental Take Permit (ITP) pursuant to Fish and Game Code Section 2081(b) for activities described in the HCP, including planning and construction of the FORTAG trail system. However, absent securing take coverage through these efforts, take authorization would need to occur through issuance of an ITP by CDFW to TAMC, pursuant to Fish and Game Code Section 2081(b) before Project ground or vegetation disturbing activities occur. Alternatively, in the absence of protocol surveys, the applicant can assume presence of CTS within the Project area and obtain an ITP from CDFW at any time.

COMMENT 2: Monterey gilia, Seaside bird's-beak, and CRPR plant species

Issue: Monterey gilia and the CRPR plant species mentioned above are known to occur on and in the vicinity Project area (USFWS 2008, CDFW 2019). Lands designated for development that were transferred from the Department of the Army's former Fort Ord, as is the case with portions of the Project site, contain high quality habitat for the CESA-listed Monterey gilia (USFWS 2008). In addition, the sandy soils and maritime chaparral vegetation community present within portions of the Project area are suitable to support CESA-listed seaside bird's-beak (CDFW 2019, CNPS 2019, UC Davis 2018). The Project area also supports coastal scrub and coastal prairie communities, which have the potential to support numerous CRPR-species including, but not limited to, Monterey spineflower, Eastwood's goldenbush, Pajaro manzanita, pink Johnny-nip, Kellogg's horkelia, Monterey pine, Hickman's onion, Hooker's manzanita, Jolon clarkia, northern curly-leaved monardella, sand-loving wallflower, sandmat manzanita, and Toro manzanita. Therefore, grading and development associated with the Project have the potential to impact special-status plant species.

Specific impact: Without appropriate avoidance and minimization measures potential impacts to special-status plant species include inability to reproduce and direct mortality. Unauthorized take of species listed as threatened, endangered, or rare pursuant to CESA or the Native Plant Protection Act is a violation of Fish and Game Code.

Evidence impact would be significant: Monterey gilia, seaside bird's-beak, and many of the CRPR-listed plant species above are narrowly distributed endemic

species with specific habitat requirements. These species are threatened with habitat loss and habitat fragmentation resulting from development, vehicle and foot traffic, and non-native plant species (CNPS 2019), all of which may be unintended impacts of the Project. Therefore, impacts of the Project have the potential to significantly impact populations of the species mentioned above.

Recommended Potentially Feasible Mitigation Measure(s)

To evaluate potential impacts to special-status plants associated with the Project, CDFW recommends conducting the following evaluation of the Project area and including the following mitigation measures as conditions of Project approval in the Project's CEQA document.

Recommended Mitigation Measure 5: Special-Status Plant Habitat Assessment

CDFW recommends that a qualified biologist conduct a habitat assessment well in advance of project implementation, to determine if the Project area or its vicinity contains suitable habitat for special-status plant species.

Recommended Mitigation Measure 6: Focused Surveys

CDFW recommends that the Project area be surveyed for special-status plants by a qualified botanist following the "Protocols for Surveying and Evaluating Impacts to Special Status Native Plant Populations and Sensitive Natural Communities" (CDFW 2018). This protocol, which is intended to maximize detectability, includes identification of reference populations to facilitate the likelihood of field investigations occurring during the appropriate floristic period. In the absence of protocol-level surveys being performed, additional surveys may be necessary.

Recommended Mitigation Measure 7: Special-Status Plant Avoidance

CDFW recommends special-status plant species be avoided whenever possible by delineation and observing a no-disturbance buffer of at least 50-feet from the outer edge of the plant population(s) or specific habitat type(s) required by special-status plant species. If buffers cannot be maintained, then consultation with CDFW is warranted to determine appropriate minimization and mitigation measures for impacts to special-status plant species.

Recommended Mitigation Measure 8: Special-Status Plant Take Authorization

If a State-listed plant species is identified during botanical surveys, consultation with CDFW is warranted to determine if the Project can avoid take. CDFW is aware that efforts are underway to finalize the Fort Ord HCP and to secure companion acquisition of an ITP pursuant to Fish and Game Code Section 2081(b) for activities described in the HCP. However; if take cannot be avoided, absent securing take

coverage through these efforts, take authorization would need to occur through issuance of an ITP by CDFW to TAMC, pursuant to comply with Fish and Game Code.

COMMENT 3: California Red-Legged Frog (CRLF)

Issue: CRLF have been documented to occur within the Salinas River, which is immediately adjacent to a portion of the Project Area (CDFW 2019). CRLF primarily inhabit ponds but can also be found in other waterways including marshes, streams, and lagoons. The species will also breed in ephemeral waters (Thomson et al. 2016). Review of aerial imagery indicates the presence of several ponded wetland features within the vicinity of the Project Area that may be suitable to support CRLF. As a result, the Project has the potential to impact CRLF.

Specific impact: Without appropriate avoidance and minimization measures for CRLF, potentially significant impacts associated with the Project's activities include burrow collapse, inadvertent entrapment, reduced reproductive success, reduction in health and vigor of eggs, larvae and/or young, and direct mortality of individuals.

Evidence impact is potentially significant: CRLF populations throughout the State have experienced ongoing and drastic declines and many have been extirpated (Thomson et al. 2016). Habitat loss from growth of cities and suburbs, invasion of nonnative plants, impoundments, water diversions, stream maintenance for flood control, degraded water quality, and introduced predators, such as bullfrogs are the primary threats to CRLF (Thomson et al. 2016, USFWS 2017b). All of these impacts have the potential to result from the Project. Therefore, Project activities have the potential to significantly impact CRLF.

Recommended Potentially Feasible Mitigation Measure(s)

To evaluate potential impacts to CRLF associated with the Project, CDFW recommends conducting the following evaluation of the Project Area and including the following mitigation measures as conditions of Project approval in the Project's CEQA document.

Recommended Mitigation Measure 9: CRLF Habitat Assessment

CDFW recommends that a qualified biologist conduct a habitat assessment in advance of Project implementation, to determine if the Project Area or its immediate vicinity contain suitable habitat for CRLF.

Recommended Mitigation Measure 10: CRLF Surveys

If suitable habitat is present, CDFW recommends that a qualified wildlife biologist conduct surveys for CRLF within 48 hours prior to commencing work (two night

surveys immediately prior to construction or as otherwise required by the USFWS) in accordance with the USFWS *"Revised Guidance on Site Assessment and Field Surveys for the California Red-legged Frog"* (USFWS 2005) to determine if CRLF are within or adjacent to the Project area.

Recommended Mitigation Measure 11: CRLF Avoidance

If any CRLF are found during preconstruction surveys or at any time during construction, CDFW recommends that construction cease and that CDFW be contacted to discuss a relocation plan for CRLF with relocation conducted by a qualified biologist, holding a Scientific Collecting Permit for the species. CDFW recommends that initial ground-disturbing activities be timed to avoid the period when CRLF are most likely to be moving through upland areas (November 1 and March 31). When ground-disturbing activities must take place between November 1 and March 31, CDFW recommends a qualified biologist monitor construction activity daily for CRLF.

COMMENT 4: Northern California Legless Lizard and Coast Horned Lizard

Issue: Northern California legless lizards and coast horned lizards are known to occur in the vicinity of the Project area (CDFW 2019). Northern California legless lizards are fossorial and inhabit chaparral habitat with sandy or loose loamy soils (Thomson et al. 2016). Coast horned lizards occur in a wide variety of habitat types but require loose, fine soils for burrowing, open areas for thermoregulation, and shrub cover for refugia (Thomson et al. 2016). Review of aerial imagery and soil characteristics indicates that portions of the Project area are comprised of and surrounded by these requisite habitat features (CDFW 2019, UC Davis 2018).

Specific impact: Without appropriate avoidance and minimization measures for Northern California legless lizard and coast horned lizards, potentially significant impacts associated with ground disturbance include burrow abandonment, which may result in reduced health or vigor of eggs and/or young, and direct mortality.

Evidence impact is potentially significant: Habitat loss and fragmentation resulting from development is the primary threat to Northern California legless lizard and coast horned lizard (Thomson et al. 2016). The Project area is within the range of Northern California legless lizard and coast horned lizard and portions of it are comprised of and bordered by suitable habitat (i.e., chaparral with friable soils). As a result, ground-disturbing activities associated with development of the Project area have the potential to significantly impact local populations of this species.

Recommended Potentially Feasible Mitigation Measure(s)

To evaluate potential impacts to Northern California legless lizard associated with the Project, CDFW recommends conducting the following evaluation of the Project

area and including the following mitigation measures as conditions of Project approval in the Project's CEQA document.

Recommended Mitigation Measure 12: Habitat Assessment

CDFW recommends that a qualified biologist conduct a habitat assessment in advance of project implementation, to determine if the Project area or its immediate vicinity contain suitable habitat for Northern California legless lizard.

Recommended Mitigation Measure 13: Focused Surveys

If suitable habitat is present, CDFW recommends that a qualified biologist conduct focused surveys for Northern California legless lizard and their requisite habitat features to evaluate potential impacts resulting from ground- and vegetation-disturbance.

Recommended Mitigation Measure 14: Avoidance

Avoidance whenever possible is encouraged via delineation and observance of a 50-foot no-disturbance buffer around burrows.

COMMENT 5: Western Pond Turtle (WPT)

Issue: Portions of the Project area lie adjacent to the Salinas River, which may provide suitable aquatic habitat for WPT. Upland areas adjacent to the Salinas River may provide overwintering and nesting habitat for WPT, which are known to overwinter terrestrially, and which require loose soils and/or leaf litter (Thomson et al. 2016). In addition, several occurrence records of WPT are reported within the vicinity of the Project area (CDFW 2019). The presence of these requisite habitat features increases the likelihood of WPT occurrence and the potential for the Project to significantly impact the local WPT population.

Specific impact: Without appropriate avoidance and minimization measures for WPT, potential significant impacts associated with development of the Project include nest abandonment, reduced reproductive success, reduced health and vigor of eggs and/or young, and direct mortality.

Evidence impact would be significant: WPT are capable of nesting up to 1600-feet away from waterbodies. Nesting occurs in spring or early summer and hatching occurs in fall. Hatchlings can remain in the nest throughout the first winter, emerging the following spring. In addition, WPT are slow to reach sexual maturity, which naturally reduces the number of WPT that are recruited into a population each year (Thomson et al. 2016). Threats to WPT include land use changes and habitat fragmentation associated with development, road mortality, as well as a decrease in

suitable upland nesting/overwintering habitat (Thomson et al. 2016), all of which are potential impacts of the Project. As a result, Project development has the potential to significantly impact the local population of WPT.

Recommended Potentially Feasible Mitigation Measure(s)

To evaluate the potential for the Project to impact WPT, CDFW recommends conducting the following evaluation of the Project area and including the following measures as conditions of approval in the Project's CEQA document.

Recommended Mitigation Measure 15: Preconstruction Surveys

CDFW recommends that a qualified wildlife biologist conduct focused surveys for WPT during the nesting season (March through August). If any nests are discovered, CDFW recommends that they remain undisturbed until the eggs have hatched, and the nestlings are capable of independent survival. In addition, CDFW recommends conducting pre-construction surveys for WPT immediately prior to initiation of construction activities.

Recommended Mitigation Measure 16: Avoidance

WPT detection during surveys warrants consultation with CDFW to discuss how to implement ground-disturbing activities and avoid take. However, CDFW recommends that if any WPT are discovered immediately prior to or during Project activities they be allowed to move out of the area on their own volition. If this is not feasible, CDFW recommends that a qualified biologist who holds a Scientific Collecting Permit for the species, capture and relocate the turtle(s) out of harm's way to the nearest suitable habitat immediately upstream or downstream from the Project Area.

COMMENT 6: Burrowing Owl (BUOW)

Issue: BUOW have been documented to occur in the vicinity of the Project area (CDFW 2019). Review of aerial imagery reveals that suitable habitat for BUOW is present both within and in the vicinity of the Project area. BUOW inhabit open, treeless areas containing small mammal burrows, a requisite habitat feature used by BUOW for nesting and cover (Poulin et al. 2011). Habitat both within and bordering portions of the Project area, has the potential to support these habitat features. Therefore, there is potential for BUOW to occupy or colonize the Project area or its vicinity.

Specific impact: Potentially significant direct impacts associated with Project construction include burrow collapse, inadvertent entrapment, nest abandonment, reduced reproductive success, reduction in health and vigor of eggs and/or young, and direct mortality of individuals.

Evidence impact is potentially significant: BUOW rely on burrow habitat year-round for their survival and reproduction. Habitat loss and degradation are considered the greatest threats to BUOW in California (Gervais et al. 2008). Therefore, ground-disturbing activities associated with the Project have the potential to significantly impact local BUOW populations. In addition, and as described in CDFW's "*Staff Report on Burrowing Owl Mitigation*" (CDFG 2012), excluding and/or evicting BUOW from their burrows is considered a potentially significant impact under CEQA.

Recommended Potentially Feasible Mitigation Measure(s) (Regarding Environmental Setting and Related Impact)

To evaluate potential impacts to BUOW associated with the Project, CDFW recommends conducting the following evaluation of the Project area and including the following mitigation measures as conditions of Project approval in the Project's CEQA document.

Recommended Mitigation Measure 17: BUOW Habitat Assessment

CDFW recommends that a qualified biologist conduct a habitat assessment in advance of Project implementation, to determine if the Project area or its vicinity contains suitable habitat for BUOW.

Recommended Mitigation Measure 18: BUOW Surveys

If suitable habitat for BUOW is present, CDFW recommends assessing presence/absence of BUOW by having a qualified biologist conduct surveys following the California Burrowing Owl Consortium's (CBOC) "*Burrowing Owl Survey Protocol and Mitigation Guidelines*" (CBOC 1993) and CDFW's "*Staff Report on Burrowing Owl Mitigation*" (CDFG 2012). Specifically, CBOC and CDFW's Staff Report suggest three or more surveillance surveys conducted during daylight with each visit occurring at least three weeks apart during the peak breeding season (April 15 to July 15), when BUOW are most detectable. In addition, CDFW advises that surveys include a 500-foot buffer around the Project area.

Recommended Mitigation Measure 19: BUOW Avoidance

Should a BUOW be detected, CDFW recommends no-disturbance buffers, as outlined in the "*Staff Report on Burrowing Owl Mitigation*" (CDFG 2012), be implemented prior to and during any ground-disturbing activities. Specifically, CDFW's Staff Report recommends that impacts to occupied burrows be avoided in accordance with the following table unless a qualified biologist approved by CDFW verifies through non-invasive methods that either: 1) the birds have not begun egg laying and incubation; or 2) that juveniles from the occupied burrows are foraging independently and are capable of independent survival.

Location	Time of Year	Level of Disturbance		
		Low	Med	High
Nesting sites	April 1-Aug 15	200 m*	500 m	500 m
Nesting sites	Aug 16-Oct 15	200 m	200 m	500 m
Nesting sites	Oct 16-Mar 31	50 m	100 m	500 m

* meters (m)

Recommended Mitigation Measure 20: BUOW Passive Relocation and Mitigation

If BUOW are found within these recommended buffers and avoidance is not possible, it is important to note that according to the Staff Report (CDFG 2012), exclusion is not a take avoidance, minimization, or mitigation method and is considered a potentially significant impact under CEQA. However, if necessary, CDFW recommends that burrow exclusion be conducted by qualified biologists and only during the non-breeding season, before breeding behavior is exhibited and after the burrow is confirmed empty through non-invasive methods, such as surveillance. CDFW recommends replacement of occupied burrows with artificial burrows at a ratio of 1 burrow collapsed to 1 artificial burrow constructed (1:1) as mitigation for the potentially significant impact of evicting BUOW. Since BUOW may attempt to colonize or re-colonize an area that will be impacted, CDFW recommends ongoing surveillance, at a rate that is sufficient to detect BUOW if they return.

COMMENT 7: American Badger

Issue: American badger have been documented to occur in the vicinity of the Project area (CDFW 2019). Badgers occupy sparsely vegetated land cover with dry, friable soils to excavate dens, which they use for cover, and that support fossorial rodent prey populations (i.e., ground squirrels, pocket gophers, etc.) (Zeiner et. al 1990). The Project area may support these requisite habitat features. Therefore, the Project has the potential to impact American badger.

Specific impact: Without appropriate avoidance and minimization measures for American badger, potentially significant impacts associated with ground disturbance include direct mortality or natal den abandonment, which may result in reduced health or vigor of young.

Evidence impact is potentially significant: Habitat loss is a primary threat to American badger (Gittleman et al. 2001). The Project will involve construction of an approximately 27-mile long trail, resulting in a high degree of land conversion and potential habitat fragmentation. As a result, ground-disturbing activities have the potential to significantly impact local populations of American badger.

Recommended Potentially Feasible Mitigation Measure(s)

To evaluate potential impacts to American badger associated with the Project, CDFW recommends conducting the following evaluation of the Project area and including the following mitigation measures as conditions of Project approval in the Project's CEQA document.

Recommended Mitigation Measure 21: American Badger Habitat Assessment

CDFW recommends that a qualified biologist conduct a habitat assessment in advance of Project implementation, to determine if the Project area or its immediate vicinity contain suitable habitat for American badger.

Recommended Mitigation Measure 22: American Badger Surveys

If suitable habitat is present, CDFW recommends that a qualified biologist conduct focused surveys for American badger and their requisite habitat features (dens) to evaluate potential impacts resulting from ground- and vegetation-disturbance.

Recommended Mitigation Measure 23: American Badger Avoidance

Avoidance whenever possible is encouraged via delineation and observation of a 50-foot no-disturbance buffer around dens until it is determined through non-invasive means that individuals occupying the den have dispersed.

Would the Project have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by CDFW or USFWS?

COMMENT 8: Lake and Streambed Alteration (LSA)

Issue: Portions of the Project area are immediately adjacent to the Salinas River. Project activities conducted within the Salinas River are subject to CDFW's LSA regulatory authority, pursuant Fish and Game Code Section 1600 et seq.

Specific impact: Work within stream channels has the potential to result in substantial diversion or obstruction of natural flows; substantial change or use of material from the bed, bank, or channel (including removal of riparian vegetation); deposition of debris, waste, sediment, toxic runoff or other materials into water causing water pollution and degradation of water quality.

Evidence impact is potentially significant:

Lake and Streambed Alteration

Activities within streams are subject to CDFW's LSA regulatory authority. Construction activities within stream features have the potential to impact

downstream waters. Streams function in the collection of water from rainfall, storage of various amounts of water and sediment, discharge of water as runoff and the transport of sediment, and they provide diverse sites and pathways in which chemical reactions take place and provide habitat for fish and wildlife species. Disruption of stream systems such as these can have significant physical, biological, and chemical impacts that can extend into the adjacent uplands adversely effecting not only the fish and wildlife species dependent on the stream itself, but also the flora and fauna dependent on the adjacent upland habitat for feeding, reproduction, and shelter.

Water Diversion

Water diversions can impact flow regimes. Prolonged low flows can cause streams to become degraded and cause channels to become disconnected from floodplains (Poff et al. 1997). This process decreases available habitat for aquatic species including fish that utilize floodplains for nursery grounds. Prolonged low flows can also increase mortality for species that rely on specific flow regimes, such as endangered salmonids (Moyle 2002). Amphibians can also be sensitive to decreased flows. Kupferberg et al. (2012) reported that low flows were strongly correlated with early life stage mortality and decreased adult densities of California red-legged frogs, a species of special concern in California, and one with potential to occur in the Project area. In addition, alterations to flows can affect the health of riparian vegetation, reducing habitat quality for wildlife species.

Recommended Potentially Feasible Mitigation Measure(s)

Recommended Mitigation Measure 24: Stream and Wetland Mapping, and LSA

CDFW recommends that formal stream mapping and wetland delineation be conducted by a qualified biologist to determine the location and extent of streams (including any floodplain) and wetlands within and adjacent to the Project area. Please note that, while there is overlap, State and Federal definitions of wetlands as well as what activities require Notification pursuant to Fish and Game Code Section 1602 differ. Therefore, it is advised that the wetland delineation identify both State and Federal wetlands in the Project area as well as what activities may require Notification to comply with Fish and Game Code. Fish and Game Code Section 2785 (g) defines wetlands; further, Section 1600 et seq. applies to any area within the bed, channel, or bank of any river, stream, or lake. It is important to note that while accurate wetland delineations by qualified individuals have resulted in more rapid review and response from USACE and CDFW, substandard or inaccurate delineations have resulted in unnecessary time delays for applicants due to insufficient, incomplete, or conflicting data. CDFW advises that site map(s) designating wetlands as well as the location of any activities that may affect a lake or stream be included with any Project site evaluations.

Recommended Mitigation Measure 25: Notification of Lake or Streambed Alteration

Fish and Game Code Section 1600 et seq. requires an entity to notify CDFW prior to commencing any activity that may: (a) substantially divert or obstruct the natural flow of any river, stream, or lake; (b) substantially change or use any material from the bed, bank, or channel of any river, stream, or lake (including the removal of riparian vegetation); (c) deposit debris, waste or other materials that could pass into any river, stream, or lake. "Any river, stream, or lake" includes those that are ephemeral or intermittent as well as those that are perennial. CDFW is required to comply with CEQA in the issuance of an LSA Agreement. For additional information on Notification requirements, please contact our staff in the LSA Program at (559) 243-4593.

II. Editorial Comments and/or Suggestions

Nesting Birds: CDFW encourages Project implementation occur during the bird non-nesting season. However, if ground-disturbing activities must occur during the breeding season (February through mid-September), the project's applicant is responsible for ensuring that implementation of the project does not result in violation of the Migratory Bird Treaty Act or relevant Fish and Game Codes as referenced above.

To evaluate project-related impacts on nesting birds, CDFW recommends that a qualified wildlife biologist conduct pre-activity surveys for active nests no more than 10-days prior to the start of ground disturbance to maximize the probability that nests that could potentially be impacted are detected. CDFW also recommends that surveys cover a sufficient area around the work site to identify nests and determine their status. A sufficient area means any area potentially affected by the project. In addition to direct impacts (i.e., nest destruction), noise, vibration, and movement of workers or equipment could also affect nests. Prior to initiation of construction activities, CDFW recommends a qualified biologist conduct a survey to establish a behavioral baseline of all identified nests. Once construction begins, CDFW recommends a qualified biologist continuously monitor nests to detect behavioral changes resulting from the project. If behavioral changes occur, CDFW recommends the work causing that change cease and CDFW consulted for additional avoidance and minimization measures.

If continuous monitoring of identified nests by a qualified wildlife biologist is not feasible, CDFW recommends a minimum no-disturbance buffer of 250-feet around active nests of non-listed bird species and a 500-foot no-disturbance buffer around active nests of non-listed raptors. These buffers are advised to remain in place until the breeding season has ended or until a qualified biologist has determined that the birds have fledged and are no longer reliant upon the nest or parental care for survival. Variance from these no-disturbance buffers is possible when there is compelling biological or ecological reason to do so, such as when the construction area would be concealed

from a nest site by topography. CDFW recommends that a qualified wildlife biologist advise and support any variance from these buffers and notify CDFW in advance of implementing a variance.

Federally Listed Species: CDFW recommends consulting with the USFWS on potential impacts to federally listed species including, but not limited to, CTS, CRLF, Monterey gilia, and Monterey spineflower. Take under the federal Endangered Species Act (ESA) is more broadly defined than CESA; take under ESA also includes significant habitat modification or degradation that could result in death or injury to a listed species by interfering with essential behavioral patterns such as breeding, foraging, or nesting. Consultation with the USFWS, in order to comply with ESA, is advised well in advance of any ground disturbing activities.

ENVIRONMENTAL DATA

CEQA requires that information developed in environmental impact reports and negative declarations be incorporated into a database that may be used to make subsequent or supplemental environmental determinations (Pub. Resources Code, § 21003, subd. (e)). Accordingly, please report any special status species and natural communities detected during Project surveys to the California Natural Diversity Database (CNDDDB). The CNDDDB field survey form can be found at the following link: <https://www.wildlife.ca.gov/Data/CNDDDB/Submitting-Data>. The completed form can be emailed to CNDDDB at the following email address: CNDDDB@wildlife.ca.gov. The types of information reported to CNDDDB can be found at the following link: <https://www.wildlife.ca.gov/Data/CNDDDB/Plants-and-Animals>.

FILING FEES

If it is determined that the Project will impact fish and/or wildlife, an assessment of filing fees is necessary. Fees are payable upon filing of the Notice of Determination by the Lead Agency and serve to help defray the cost of environmental review by CDFW. Payment of the fee is required in order for the underlying project approval to be operative, vested, and final (Cal. Code Regs, tit. 14, § 753.5; Fish & G. Code, § 711.4; Pub. Resources Code, § 21089).

CONCLUSION

CDFW appreciates the opportunity to comment on the Project to assist TAMC in identifying and mitigating the Project's impacts on biological resources.

More information on survey and monitoring protocols for sensitive species can be found at CDFW's website (<https://www.wildlife.ca.gov/Conservation/Survey-Protocols>). FORTAG NOP Comments

The Monterey Bay Chapter of the California Native Plant Society notes that the FORTAG project will pass through or near many sensitive plant communities such as riparian, maritime chaparral, and oak woodland. When surveying for sensitive plants and communities, MB-CNPS requests that the list for the project include all potential CNPS List 4 species in addition to List 1 rare plants. These plants are of limited range or abundance and are a watch list for plants that may potentially become rare.

The project will have the great potential to introduce or spread non-native and invasive plants over a large region of native plant communities. Avoidance and successful mitigation measures will need to be carefully considered to reduce long term impact of non-native and invasive plant proliferation on high quality and sensitive native plant communities.

The EIR and analysis needs a good baseline study of the native plant communities to identify disturbed areas that would be more appropriate for the route and reduce the impact on building the trail in more pristine habitats. A pre-survey for the existence of non-native and invasive plants is needed to establish baseline conditions for any mitigation program. Mitigation should be prioritized to identify non-native plants and any invasively-acting plants introduced during trail construction. A dedicated funding source and monitoring program to protect high quality native habitats from the degradation of invasive non-native plants must be established in perpetuity.

MB-CNPS is very concerned about the long term impacts of trailside vegetation clearance activities. Many parks with active trail maintenance have encountered

severe problems with invasive and non-native plants proliferating along the trails. These are then vectored into the surrounding wild lands. We are concerned about the proposed 2-foot shoulders along the paths and the real possibility that these will become weed zones that introduce weeds into previously pristine habitats. Methods to minimize disturbance on the edges of the trails must be incorporated in the Best Management Practices for trailside maintenance. Native plants must be allowed to compete at the trail edge and blanket clear cutting must be discouraged to prevent weedy zones from proliferating.

MB-CNPS has concerns about some FORTAG maps that show a 200-foot fire break zone on the west side of the trail as it extends from Del Rey Oaks to Marina. Is this a component of the project being analyzed? The EIR would need to fully analyze proposed fuel treatments and alternatives that would limit disturbance and control the invasive weeds that might proliferate with routine disturbance of a 200-foot wide zone. Use of prescribed burns would be consistent with the fire adapted chaparral environment, but would also require vigorous control of invasive plants after any burns.

In December 2015, the Board of Directors of the Monterey Bay Chapter of the California Native Plant Society adopted the following language regarding the proposed FORTAG trail through CNPS Plant Reserve #1:

MOTION - Monterey Bay CNPS supports the general concept of a trail through Plant Reserve 1. The Chapter would need to prevent negative impacts on the maritime chaparral, the rare plants and the riparian corridor by working closely on the choice of the route location, approving the trail design and maintenance practices, and creating a trail/habitat corridor to connect with the future BLM portion of Fort Ord National Monument.

Plant Reserve #1 has conserved a unique assemblage of uncommon manzanita species since the reserve's designation by the U.S. Army in the 1970's. Potential impacts a trail would involve such as removal of sensitive maritime chaparral, damage to riparian areas, and introduction of weeds must be considered by the DEIR. The proposed route is very close to or is impacting a riparian corridor, a sensitive plant community. The route could also traverse dense coastal live oak woodland with potential need to remove oaks especially if a wide path is used. To minimize impacts, existing degraded routes through the reserve should be utilized. For the proposed route and the alternatives listed below, to minimize impacts, the path should be non-paved, 6 feet wide, with no shoulders that would encourage weed zones.

We suggest the following alternatives to the proposed route through Plant Reserve #1:

- The proposed alternative that climbs uphill northward to the South Boundary Road corridor should be examined for its potential impacts, which would mainly be on oak woodlands.
- An additional alternative route could use pre-existing spur trails to climb up to old fire breaks atop the ridge in the southern portion of the reserve and continue east and then north to join the proposed alternate route north of South Boundary Road. Utilizing pre-existing roads or fire breaks would avoid carving a new route through the reserve.

We have similar concerns about the path through the Frog Pond Regional Park where a current 3-foot wide path is proposed to be 8 feet wide with 2-foot shoulders (12-foot corridor). This path is entirely within a riparian woodland zone and needs to be limited to a more narrow path such as we proposed for the native plant reserve to minimize its impacts.

Under CEQA, alternative trail alignments must be considered and evaluated if there are potential impacts to sensitive resources. The Least Environmentally Damaging Alternative must be adopted, unless there are over-riding considerations that provide substantial evidence that there are no good alternatives. Mitigations are supposed to offset unavoidable damages.

Sincerely,

Donna Burych, Conservation Chair, Monterey Bay Chapter CNPS

Dedicated to the preservation of California native flora

Re: Fort Ord Regional Trail & Greenway (FORTAG) project.

Dear Mr. Deal:

California State University, Monterey Bay (CSUMB) has reviewed the Notice of Preparation (NOP) for the Fort Ord Regional Trail & Greenway (FORTAG) project Environmental Impact Report (EIR). As noted in the NOP, the FORTAG trail would traverse California State University Monterey Bay (CSUMB) campus and provides an important artery for non-vehicular travel for the campus by connecting it to the existing Monterey Bay Scenic Coastal Trail to the west, CSUMB's Main Campus in the center and CSUMB open space and East Campus Housing to the east. The campus has shown its support for the trail by including the conceptual alignment in in CSUMB's draft Master Plan Guidelines.

The University is particularly interested that the EIR analyze and mitigate potential environmental impacts specific to the campus and consider the following comments in the EIR and relevant planning efforts.

1. **Detailed alignment on campus** – The campus would like to work closely with TAMC staff and consultants to determine the exact alignment.
2. **Safe Trail crossings** – CSUMB is concerned about the safe trail crossing of all major roads, especially those on campus referenced below. We ask that the future traffic conditions be looked at in detail when planning over, under or at grade connections.
 - a. **8th Avenue** (at any location) – 8th Avenue poses many challenges including slope, visibility, and potential vehicle conflicts with existing campus functions on the road's west side.
 - b. **Inter-Garrison Road** – The trail crosses the road at both the horse crossing east of 8th Avenue and at 8th Avenue.

3. **Tree replacement** – The campus aims to reduce tree loss on campus and for every one tree over 4" diameter at breast height (dbh) removed; CSUMB requires the replacement and survival rate of 2 new trees.
4. **Veterans Administration (VA) clinic property** – Note that if the trail crosses VA property internal to the campus, TAMC will need to work directly with the VA.
5. **Storm water** – We hope the project will consider prior discussions to use the trail to percolate storm water between 2nd Avenue and General Jim Moore Boulevard, thereby reducing runoff to temporary percolation ponds west of Highway 1.
6. **CSUMB permitting requirements** – A Temporary Permit issued by Campus Planning and Development and evidence of insurance coverage are required prior to working on campus.
7. **Maintenance** - Who is responsible for and how will trail maintenance be handled?
8. **Lighting** – If the trail or portions of the trail require lighting we ask the project consider using LEED light pollution reduction standards as a minimum.

CSUMB looks forward to continue working with TAMC staff on this exciting project and insuring its successful planning, design and implementation. Please contact me at any time if you have any questions or would like to discuss these comments in detail.

Sincerely,

Kevin R. Saunders

RE: FORT Friends Comment on NOP for FORTAG Project

Dear Mr. Deal:

On behalf of the Board of Directors of Fort Ord Recreation Trails Friends (FORT Friends), I am writing to express conceptual support for the Fort Ord Regional Trail and Greenway (FORTAG) Project. FORT Friends is a 501(c)(3) non-profit organization that works to preserve and expand public access to Fort Ord trails, serve as a clearinghouse of information, partner with land managers and support sustainable economic development that benefits local residents, businesses and the environment. FORT Friends is comprised of cyclists (road and mountain bikes), hikers, trail runners, equestrians, educators and naturalists who share a passion for the Fort Ord trails. The FORTAG project goals reflect our organization's mission and goals, particularly through high quality bicycle and pedestrian trails connecting residents and visitors to the BLM Fort Ord National Monument and adjacent public open space. We support the goal for residents and visitors of all ages and abilities to reach housing, jobs, schools and community centers in and around the former Fort Ord, the Monterey Peninsula and Salinas.

In refining the project description, FORT Friends recommends means to maximize safety and comfort when different users are sharing the trails in one area (examples: secure dirt footing for horses adjacent to cyclists, runners, strollers on paved trail; minimize bicycle-car interactions). FORTAG trail "rules" should also be consistent from one jurisdiction to another (example: E-bike policy and regulation).

Thank you for your consideration of these comments.

Sincerely,

(original signed by Henrietta Stern)

RE: MORCA Comments on Notice of Preparation for FORTAG Project

Dear Mr. Deal:

I am writing on behalf of the Monterey Off-Road Cycling Association (MORCA) Board of Directors and membership to express support for the Fort Ord Regional Trail and Greenway (FORTAG) Project. MORCA is 501(c)(3) non-profit organization with a mission to advocate for mountain bicycling while giving back to local trails. To that end, MORCA has contributed thousands of hours of volunteer labor on the BLM-managed Fort Ord National Monument trails and obtained grant funding to install signage for the Monterey County trail system at Fort Ord.

The FORTAG is consistent with our organization's mission and goals as it will provide a new, safe connection for mountain bikers (and road cyclists) in our community to access paved, gravel and single-track trails on the Fort Ord National Monument and adjacent non-federal public open space without driving. This project also has direct connections to the Monterey Bay Sanctuary Scenic Trail. The access and active transportation improvements will help foster community appreciation of the National Monument's diverse oak woodlands, open grasslands, and maritime chaparral along with stunning views of the California Coast and Salinas Valley.

We believe the project will have a beneficial effect on the mountain bike community based on the project description in the NOP, specifically the inclusion of unpaved buffer zones adjacent to the paved trail and no removal of existing single-track trails used by mountain bikers and others.

Thank you for your consideration of these comments.

Sincerely,

Original Signed by Henrietta Stern

Henrietta Stern, Secretary
Monterey Off-Road Cycling Association

CC: MORCA Board of Directors

To: Alta Planning, Rich Deal, Stefania Castillo (TAMC), FORTAG Team

CC: Alison Kerr, Dino Pick, and Jeff Hoyne

I am writing this letter primarily in response to the demonstration project at Del Rey Park on April 13, 2019. There was a poster on display at this event showing the route options for FORTAG in and around Del Rey Oaks along with Pros/Cons for each route. Those of us who live on or near Angelus Way were deeply disappointed to see that the only "CON" listed for the route on Angelus Way was something along the lines of "residents would have more bicyclists in their neighborhood." This was a gross under-statement.

Many of us have attended mtgs, written letters/emails, and voiced our concerns regarding the trail coming through Angelus Way. We have been told time and time again that our input matters. Unfortunately, seeing our concerns reduced to "more bikes" is offensive. Why even list pros and cons if you are going to be blatantly biased?

Listed below is a simplified list of concerns that have been shared with you previously regarding the FORTAG route through Del Rey Oaks on Angelus Way. I am also sharing this with Alison Kerr our Mayor, Dino Pick our City Manager, and Jeff Hoyne our Chief of Police. I'm hoping it will help clarify some of the "CONS."

- 1) The residents have voiced their concerns of more people in the neighborhood because FORTAG is not merely a bike path but a MAJOR REC TRAIL in a region with high tourism. I think a clearer description of why we are opposed to this route is **the very real threat of over-tourism**. Del Rey Park is regularly utilized by people who are not Del Rey Oaks residents, and this is NOT a problem. Responsible people are welcomed just as I feel welcomed when I go to all the parks outside of Del Rey Oaks. However, FORTAG is a **MAJOR** project with the potential to introduce an unsustainable level of visitors that will change the character of our neighborhood. It only takes a few hashtags on Instagram to pique the interest of thousands.

If you don't already, read BigSurKate's blog about the issues that plague Big Sur and other beautiful places. No one would have ever imagined that people would literally double park on HWY 1 to take selfies at Bixby Bridge, and it happens all the time now on summer weekends. Sustainable tourism is difficult in the age of social media and I don't trust that FORTAG will be an exception.

The FORTAG website itself claims that aside from use of the path, DRO residents can benefit from something like a future trail-side cafe. More likely, it would only benefit the cafe owner, few employees, and the city with minimal tax revenue unless it is an extremely busy cafe, which no one wants in this residential neighborhood.

Furthermore city's Vision Statement DOES NOT represent any of the residents I know. Instead, it sounds like it was written by someone who was already envisioning FORTAG. It's very disheartening to know that the plan for FORTAG to go through Del Rey Oaks was in the works for years without any outreach to the residents who would actually host the trail. One early meeting in 2015 was with our former City Manager Daniel Dawson. Dawson, as I'm sure you know, is facing felony charges for using his position as City Manager for personal financial gain at the expense of the City of DRO. So residents are understandably very distrustful and cautiously suspicious of any agreements made by city leaders. The needs of our small city have been ignored and FORTAG is one more example of exploiting our town for regional interests.

We are also concerned about the possibility of weekly or monthly marathons and bike events coming through a residential neighborhood. There is already frustration with the constant construction and traffic from recreational events. I am hoping our City Council will adopt a strict ordinance restricting how many events will be hosted on the Del Rey Oaks portion of FORTAG. This is not only regarding Angelus Way, but Canyon Del Rey Blvd/Hwy 218, which is the ONLY outlet for those of us who live on the South side of the HWY.

- 2) **The inevitable increase in crime as a result of more people in the neighborhood combined with the proximity of the trail to a park with (most likely?) the highest crime rate on the peninsula.** The Angelus Way neighborhood is not like the isolated communities along 17 mile drive and Carmel-by-the-Sea. Laguna Grande Park is nearby and the main reason we do not have the same degree of problems in Del Rey Park is the physical inaccessibility of the park. Very few people travel on Angelus Way unless their destination is the Del Rey Park or homes in the neighborhood. I appreciate that our current PD is dedicated to dealing with crime connected to FORTAG use, but who's to say that there will be funding or interest for that level of police presence

10/20/30 years from now? ALL people have the right to enjoy public parks, so it is difficult to identify and deter criminals, especially if they are on a major recreation path. I do not want to live in a neighborhood where the police are harassing people or engaging in profiling, which means that we will have to wait for an actual crime to be committed before the police will engage with suspicious people.

We are concerned that FORTAG will result in an **increase** of crime. Easter weekend, 2018, a man broke into the church and preschool on Rosita near Angelus Way. The man's crimes that day began at Safeway and it is likely that he walked to the church. My son was attending the preschool at the time. I was told that not only did the intruder break in and steal money, switch toys and supplies from one classroom to the other, go through the food pantry, and leave a homemade brass-knuckled glove on the owner's office chair; he also took all the knives out of the kitchen drawer and left them laid out in a neat row on the counter. It was naturally scary leaving our child knowing that the perpetrator had not been apprehended that morning. Our police department did an excellent job of locating and arresting the intruder within a day.

- 3) **Homeowners on the creek-side of Angelus have bridges over the creek and are concerned about the personal and financial liability of people coming onto their property and getting injured.** This is a serious concern since the bridges/driveways over the creek are built, owned, and maintained by the homeowners. An increase in people walking/biking will result in an increase of trespassing and result in possible injuries.
- 4) There have been concerns voiced by residents that have been reduced to a simple opposition to an increase of homeless people in the neighborhood. **I personally am not as worried about homeless people as I am about methamphetamines and heroin addicts utilizing FORTAG to gain access to our neighborhood and Del Rey Park.** We currently have homeless people come through our neighborhood on their way to undeveloped areas to camp. I have not had any issues with these small groups of people and personally know homeless people who either live in their cars, camp RESPONSIBLY, or "couch surf". But, unfortunately, the make-up of a large part of the population that gathers in Laguna Grande overlaps with people with serious and dangerous drug addictions. The Laguna Grande population does not represent the homeless community as a whole. There are a lot of homeless people who would not enter the camps at Laguna Grande

because they know how dangerous it is. I'm sure you have all followed the news stories of the homeless encampment near Ross and River Street in Santa Cruz. The clean-up of the area has uncovered THOUSANDS of needles and now has contaminated soil from human waste. The tents were filled with stolen bicycles and operated as "chop-shops."

Please understand this is not an attack on the homeless population as a whole, but a valid concern about the types of issues that plague a part of the community at Laguna Grande Park. Some of the people engaging in criminal behavior in Laguna Grande are not homeless, but monopolizing on the opportunities a wooded area provides. I would much rather see the \$40 million being spent on FORTAG be spent on sustainable housing for the homeless.

I lived in Santa Cruz for about 7 years, I know what it's like to leave your house and walk up on someone shooting up heroin at the park next door in broad daylight, and I know that kids currently get pricked by needles at Dennis the Menace Park. I also know about the horrific, violent crimes committed by people when on methamphetamines. We are not immune to these issues. FORTAG will undoubtedly bring more drug crimes into our neighborhood park. Ignoring this, which will only get worse with the gentrification of Seaside and as income-inequality in California grows, is, at best, naïve.

- 5) There have been concerns voiced regarding **parking issues** on Angelus Way if there isn't a "share the road" design. There will be many people who will drive to our residential neighborhood to park their cars and hop on the trail. However, I think there are plans to create a big parking lot by City Hall which could mitigate these concerns.
- 6) **Environmental Concerns.** Simply put, humans are bad for the environment. More human activity near the creek and at the Frog Pond is not good. I cherish the Frog Pond and go there often. Frogs need to croak to communicate and are very sensitive to the presence of humans. I know the EIR should address this, but seeing projects like the Sand City "Eco" Resort get approved under a veil of greenwashing leaves me with no faith in the process.

- 7) **The character of the Frog Pond will change.** The folks at the demonstration told me that the trail would go THROUGH the Frog Pond and not up Carlton. I said that bikes weren't allowed there and they checked with each other and told me that bike ARE allowed. I checked the MPRPD website and it states that the trails for hiking only. I messaged MPRPD and the ranger responded that bikes are NOT allowed and that any changes would need board approval. I hope MPRPD does not allow bikes on Frog Pond trails or has the trail widened to 10 feet to accommodate speeding bikes.
- 8) **The proposed tunnel from Del Rey Park to the Frog Pond is unnecessary and will pave the way for more traffic and speeding cars.** Aside from the obvious effect of traffic on quality of life, wildlife will not know to use the tunnel and we will have more road-kill. I think a lighted cross-walk would increase safety and remind drivers to slow down. A lighted crosswalk will not only create safer passage for those who do not know how to cross a two-lane highway, but it will also help to control traffic.

I cross the highway from the park to the Frog Pond on a regular basis with children without issue. We hold hands and wait for traffic. Cars will often stop for us and wave us through. It is only a few yards to cross and we never wait more than one minute. I understand the goals of TAMC may be to get as many cars through Del Rey Oaks as fast as possible, but as a resident who can only leave my neighborhood by accessing Canyon Del Rey/HWY 218, I am naturally concerned about increased traffic.

- 9) Many have stated that FORTAG seems to be designed to benefit a vocal and active special interest group of bikers. I believe that Scott and Fred have good intentions, but IF the goal is to facilitate active transportation options to the local people, then **why isn't the focus on improving the bike lanes and sidewalks that already exist in higher density and/or lower income neighborhoods?** As a local Special Education Teacher I have regularly pushed people in wheelchairs through Seaside for Community-Based Instruction. I know first-hand about the conditions of the sidewalks and ramps. I also know how to adapt and alter my route to for the safest trip. FORTAG simply circles high density areas and will not create a direct route for most people to get to work or school. It is for recreation. As a DRO resident, our district assigned

school is Foothill Elementary, Colton Middle School, and Monterey High. FORTAG will NOT provide a path to our schools.

- 10) Finally, **the main reason there is so much opposition to the trail in our neighborhood is it simply isn't necessary.** We enjoy the current rugged, natural environment, and if we didn't, we probably wouldn't live here. Many homes on the Angelus side of 218 are built on steep hills, with steep driveways, and long stairways leading to the entrance to the house. The narrow dirt trail behind Safeway meets our needs. If money needs to be spent to meet our needs, then we would like to see improvements to 218...namely slower speeds, a lighted crosswalk at the Frog Pond, the current bike lanes maintained, and less traffic. Unfortunately none of these needs will be met with the proposed trail.

I hope that these concerns are taken seriously by all that are involved in this project. I do not know one person in the neighborhood surrounding Angelus Way who approves of this project. I am aware there are other route options (Via Verde, Plumas, etc) but please know that I am not promoting those routes since I do not live in those neighborhoods.

Thank you,

Cindy Hickey

Executive Summary

The Fort Ord Regional Trail and Greenway (FORTAG) project includes approximately 28 miles of new paved Trail. The proposed FORTAG alignment is located at the southern end of Monterey Bay in Monterey County, within the Central California Coast Ecoregion. The Trail will cross the cities of Monterey, Del Rey Oaks, Seaside and Marina, unincorporated areas of Monterey County, California State University Monterey Bay campus lands, Fort Ord Reuse Authority lands, United States Army lands, California Department of Transportation right-of-way lands, and Monterey Peninsula Regional Park District property. Some portions of the alignment occur within the California Coastal Zone. The Trail will connect with the existing Monterey Bay Coastal Recreation Trail just west of State Route 1 and will extend through developed areas and across former Fort Ord lands to the east.

The Biological Study Area (BSA) examined for this analysis includes approximately 38 miles of linear Trails (28-mile Trail alignment and 10 miles of Trail options), from north of the City of Marina to south of the City of Seaside, a 50-foot survey buffer, and expanded study areas where the final alignment may vary.

27 vegetation communities and/or land cover types were identified within the proposed project area:

- | | |
|----------------------------------|--------------------------------------|
| ▪ Iceplant mat | ▪ Developed |
| ▪ Agriculture | ▪ Dune scrub |
| ▪ Landscaped | ▪ Eucalyptus |
| ▫ Monterey cypress | ▪ Non-native annual grassland |
| ▫ Monterey pine | ▪ Mixed Monterey pine - oak woodland |
| ▪ Arroyo willow | ▪ Coastal oak sage scrub |
| ▪ Bare ground | ▪ Coast live oak woodland |
| ▪ Maritime Chaparral | ▪ Ephemeral pond |
| ▫ Manzanita chaparral | ▪ Riparian woodland |
| ▫ Sandmat manzanita chaparral | ▪ Ruderal |
| ▪ Black sage scrub | ▪ Emergent wetland |
| ▪ Chamise – black sage chaparral | ▪ Open water |
| ▪ Chamise chaparral | ▪ Coyote brush scrub |
| ▪ California sagebrush scrub | ▪ Detention basin |

Six special status species were observed within the BSA during the reconnaissance survey; Monterey spineflower (*Chorizanthe pungens* var. *pungens*) - Federally threatened, Monterey gilia (*Gilia tenuiflora* ssp. *Arenaria*) - Federally endangered and state threatened, Hickman's onion (*Allium hickmanii*) - California Rare Plant Rank (CRPR) 1B.2, Sandmat manzanita (*Arctostaphylos pumila*) - CRPR 1B. 2, Monterey cypress (landscaped) (*Hesperocyparis macrocarpa*) - CRPR 1B. 2, and Monterey pine (landscaped) (*Pinus radiata*) - CRPR 1B. 1. Rincon determined that a total of 38 additional special status plant species have potential to occur within the BSA.

Two special status wildlife species were observed within the BSA during surveys:

- Coast horned lizard (*Phrynosoma blainvillii*) – State Species of Special Concern (SSC)
- Northern harrier (*Circus cyaneus*) – SSC

Eighteen additional special status wildlife species have the potential to occur within the BSA:

- Smith's blue butterfly (*Euphilotes enoptes smithi*) – Federally Endangered
- California tiger salamander (*Ambystoma californiense*) – Federally and State Threatened
- California red-legged frog (*Rana draytonii*) – Federally Threatened
- Coast Range newt (*Taricha torosa*) – SSC
- Western pond turtle (*Emys marmorata*) – SSC
- Northern California legless lizard (*Anniella pulchra*) – SSC
- Two-striped garter snake (*Thamnophis hammondi*) – SSC
- Cooper's hawk (*Accipiter cooperii*) – Watch List
- Golden eagle (*Aquila chrysaetos*) – Fully Protected
- Burrowing owl (*Athene cunicularia*) – SSC
- Ferruginous hawk (*Buteo regalis*) – SSC
- White-tailed kite (*Elanus leucurus*) – Fully Protected
- California horned lark (*Eremophila alpestris actia*) – Watch List
- Tricolored blackbird (*Agelaius tricolor*) – SSC
- Townsend's big-eared bat (*Corynorhinus townsendii*) – SSC
- Pallid bat (*Antrozous pallidus*) – SSC
- Monterey dusky-footed woodrat (*Neotoma fuscipes luciana*) – SSC
- American badger (*Taxidea taxus*) – SSC

Sensitive natural communities known to occur within the BSA include: central maritime chaparral, coastal and valley freshwater marsh, riparian woodlands, chamise chaparral, woolly-leaf manzanita, coyote brush scrub, sandmat manzanita chaparral, and chamise – black sage chaparral. One federally designated critical habitat unit for Monterey spineflower also occurs within the BSA.

Potential jurisdictional areas in the BSA are generally limited to the Canyon Del Rey/218 segment, which includes Laguna Grande Regional Park, Canyon Del Rey Creek, and the Frog Pond Wetland Preserve; however, isolated potential jurisdictional features such as detention basins are present within other areas of the BSA.

The proposed project could impact special status plant and wildlife species if these species are present at the time of construction. The project will impact potential upland California tiger salamander habitat. Additionally, the project could impact potential jurisdictional waters of the U.S. and State. Measures to avoid, minimize, and mitigate potential impacts have been developed for all potential impacts.

1 Introduction

Rincon Consultants, Inc. (Rincon) has prepared this Biological Resources Assessment (BRA) to document existing conditions, summarize previous biological resource reports and studies, and provide a basis for evaluation of potential impacts to special status and sensitive biological resources from the implementation of the proposed Fort Ord Regional Trail and Greenway (FORTAG) project located in Monterey County, California. This BRA has been prepared to support the California Environmental Quality Act (CEQA) environmental review of the FORTAG project.

1.1 Project Location

The proposed FORTAG alignment is located at the southern end of Monterey Bay in Monterey County (Appendix A, Figure 1 and Figure 2), within the Central California Coast Ecoregion. The Trail will cross the cities of Monterey, Del Rey Oaks, Seaside and Marina, unincorporated areas of Monterey County, California State University Monterey Bay (CSUMB) campus lands, Fort Ord Reuse Authority (FORA) lands, United States Army lands, California Department of Transportation (Caltrans) right-of-way lands, and Monterey Peninsula Regional Park District property. Some portions of the alignment occur within the California Coastal Zone. The Trail will connect with the existing Monterey Bay Coastal Recreation Trail (Coastal Rec Trail) just west of State Route 1 (SR 1) and will extend through developed areas and across former Fort Ord lands to the east.

1.2 Project Description

The FORTAG project would involve construction of a multi-use Trail in northwestern Monterey County, generally surrounding the cities of Seaside and Marina and the California State University, Monterey Bay (CSUMB) campus. The lead agency for the project is the Transportation Agency of Monterey County (TAMC).

The proposed FORTAG alignment includes approximately 28 miles of new paved Trail, with up to 10 miles of Trail options, primarily on the inland side of SR 1. The Trail would accommodate pedestrians and bicyclists of all abilities. It would also accommodate equestrians within some segments. Dogs would be allowed on-leash throughout the system. The estimated number of Trail users would be between 1,000 and 3,000 daily, with the highest usage occurring on the CSUMB campus and near the Coastal Rec Trail (Powell 2019).

The proposed Trail alignment would cross public roadways in several locations. Most of these crossings would consist of at-grade, requiring improvements and modifications, such as roadway and lane modifications; construction of medians, curb extensions, warning devices, and traffic control devices; and enhanced safety signing and striping. The Trail could additionally include a certain number of grade-separated crossings, including: undercrossings, pedestrian/bicycle bridges, and roundabouts, if such design options are selected. The specific types of crossings within each segment are described in the following section.

The majority of the Trail would be a 12-foot-wide paved path, with a two-foot-wide unpaved shoulder on both sides. A small portion of the Trail (approximately 2,000 feet or one percent) would

be developed on existing paved roadways in two locations: in Del Rey Oaks on Angelus Way, between Rosita Road and Work Memorial Park; and in Marina on Beach Road, between Del Monte Boulevard and DeForest Road. FORTAG will also include amenities such as rest areas, benches, and shade structures. Amenity areas would be located adjacent to the Trail in a four-foot wide area with compacted native soil.

In the Frog Pond Wetland Preserve in Del Rey Oaks, the proposed Trail width would be reduced to eight feet, and a stable permeable surface would be used in lieu of pavement due to the sensitive natural resources in the area. Before crossing Canyon Del Rey/SR 218, the Trail would consist of a 12-foot-wide raised pathway that would switchback after approximately 200 feet to allow Trail users access to the alignment along Carlton Drive. Where space allows, the Trail would be surrounded by an open space greenway buffer on both sides. Portions of the greenway would support unpaved paths for use by hikers, mountain bikers, equestrians, and naturalists. Under crossings are planned along the Canyon Del Rey/218 Trail segment at General Jim Moore Boulevard and under SR 218 at Frog Pond; under Reservation Road on the Northern Loop segment; and under 2nd Avenue on the CSUMB Loop North segment. Lighting will be added to all undercrossings and over crossings. Lighting is also proposed as needed at road crossings and other locations for safety and to aid in crime prevention. Lighting in open space areas, when necessary for public safety purposes, would be designed to minimize impacts to wildlife and the natural setting. FORTAG would require minimal extension of existing electric utilities to provide lighting.

Fencing may be added where necessary to separate Trail users from conflicting vehicle traffic or from equestrian use on greenway segments. Fencing may also be used to protect habitats with sensitive species, to provide a guardrail for safety, or to channelize bike riders and pedestrians in locations where the Trail is adjacent to private property and access control is required. Retaining walls may be needed to retain slopes at certain locations.

Approximately 2,050 feet of retaining walls would be required through the entire FORTAG system.

The FORTAG corridor is organized into seven segments, each of which is illustrated in Figure 2. There are several design options being considered in some of the segments, including for the alignment itself, as well as for roadway crossings. Design options totaled 10-miles of Trail. The BSA encompassed all design options, and potential impacts to biological resources from buildout of one or more of the design options have been evaluated.

Northern Marina Segment

The Northern Marina segment is located north of the City of Marina. The proposed alignment for the Marina segment would run along Beach Road from Del Monte Boulevard on the west to DeForest Road. Along Beach Road, the Trail options include either a Class II facility, which includes a bike lane along the north side of the street; or Class III facility, which is bike boulevard on both sides of the street. At DeForest Road, the Trail would exit the roadway right-of-way on the north side of Windyhill Park and run along the back side of residences on publicly-held land adjacent to Estrella Del Mar Way and Quebrada Del Mar Road. The Trail would then extend northeast along the boundary of the Marina Municipal Airport Property, connecting with the Northern Loop segment north of the Marina airport.

Northern Loop Segment

From northeastern Marina, the Northern Loop segment would traverse through Marina Municipal Airport property, near the Salinas River, to Blanco Road. The Trail would cross Blanco Road via a

new bicycle/pedestrian bridge. On the south side of Blanco Road, the Trail would continue southeast to Reservation Road, crossing Reservation Road via new undercrossing approximately 150 feet west of Inter-Garrison Road. The alignment would then continue southwest, generally south of Inter-Garrison Road, crossing Inter-Garrison Road twice via existing at-grade crossings. The Trail would continue northwestward to Engineering Equipment Road.

CSUMB Loop North Segment

From west to east, the CSUMB Loop North segment would extend from the existing Recreation Trail, over SR 1 via an existing overcrossing at 8th Street. The alignment would continue east along the southern side of 8th Street. The proposed alignment would cross 2nd Avenue approximately 300 feet south of the 2nd Avenue/8th Street intersection via a roundabout and/or undercrossing. The roundabout would serve as an interim access across 2nd Avenue until the overcrossing can be funded and constructed. However, the roundabout may remain following construction of the overcrossing. From 2nd Avenue the Trail would continue east, generally south of 8th Street and through an existing intermittently used parking lot on the CSUMB campus. The Trail would cross Imjin Road via a new pedestrian/bicycle bridge and then loop to the south toward Engineering Equipment Road, where this segment would connect with the Northern Loop extending further to the east and the CSUMB Loop South segment extending to the south.

CSUMB Loop South Segment

From west to east, the CSUMB Loop South segment would extend from the existing Recreation Trail beneath SR 1 via an existing undercrossing at 1st Street/Divarty Street. The Trail would remain on the south side of Divarty Street as it extends east to cross 1st Avenue, 2nd Avenue, and General Jim Moore Boulevard via at-grade crossings. East of General Jim Moore Boulevard, the Trail would turn to the southwest behind the Academic 3 building, Joel and Dena Gambord Business and Information Technology building, and Tanimura & Antle Family Memorial Library on the CSUMB campus. The Trail would then cross 6th Avenue and extend eastward along Butler Street to 8th Avenue. The segment would then turn to the north to travel parallel to and east of 8th Avenue to connect with the CSUMB North segment and the Northern Loop segment approximately 820 feet north of Inter-Garrison Road.

National Monument Loop Segment

From the southeast corner of the CSUMB campus, the National Monument Loop segment would continue south, immediately east of 8th Avenue to Gigling Road and then parallel to 8th Avenue to Parker Flats Cut Off Road. The intersection of Gigling Road and 8th Avenue would include a roundabout to clarify the right-of-way for Trail users and separate the Trail from 8th Avenue. In this area there would also be an approximately 1,700-foot-long bypass from the main spine to a vista point approximately 750 feet east of 8th Avenue. From 8th Avenue the Trail would abut the northern shoulder of Parker Flats Cut Off Road to the east to before crossing to the southwest at the intersection of Parker Flats Cut Off Road and Normandy Road, northwest of the Central Coast Veterans Cemetery.

From the Veterans Cemetery, the National Monument Loop segment would extend southeast to the vicinity of Eucalyptus Road and then southwest toward General Jim Moore Boulevard. East of the City of Seaside, the Trail would curve along the westernmost border of the Fort Ord National Monument to connect with the Canyon Del Rey/SR 218 and Ryan Ranch segments. This segment would additionally include connections from the eastern terminus of San Pablo Avenue at General

Jim Moore Boulevard and Broadway Avenue at General Jim Moore Boulevard in Seaside, with a Trail extending both northeast and southeast to connect to FORTAG, and another connection south and east from General Jim Moore Boulevard near the terminus of Kimball Avenue in Seaside.

Canyon Del Rey /SR 218 Segment

From the southern terminus of the National Monument Loop segment, the Canyon Del Rey/SR 218 segment would meander southward toward South Boundary Road and then southwest toward General Jim Moore Boulevard.

The Trail would cross under General Jim Moore Boulevard via a new undercrossing into the Frog Pond Wetland Preserve in Del Rey Oaks. The alignment would follow the existing Trail south and then west along the eastern and southern perimeter of Frog Pond before crossing Canyon Del Rey Boulevard. Before crossing Canyon Del Rey/SR 218, Trail users would have the option to turn left and cross the roadway via a proposed undercrossing or turn right onto a raised pathway to access Carlton Drive. The raised pathway would consist of approximately 816 feet of boardwalk material elevated on footings and would continue east before switching back toward the west and along Canyon Del Rey Boulevard/SR 218. This portion of the alignment along Canyon Del Rey/SR 218 would be a 12-foot-wide raised pathway with railings on each side and a maximum height of 17 feet. The raised pathway would maintain gentle grades for Trail users to access Carlton Drive. When the alignment routes along Canyon Del Rey/SR 218, for approximately 100 feet, the Trail would be separated from vehicular traffic by 5-foot landscaped barrier. Throughout the remainder of the Frog Pond Wetland Preserve ~~As noted earlier,~~ the Trail would be comprised of an eight-foot wide stable, permeable surface Trail in this location due to the sensitive natural resources in the area. No additional shoulder or separated trails are proposed. Existing bridges in the Preserve along the proposed alignment would be replaced with wider span bridges. ~~There would not be an additional shoulder or separated Trails, and t~~The proposed Trail improvements would only occur from the undercrossing to the south, then west adjacent to SR 218 – improvements would not be made to the entire loop Trail around the Frog Pond Wetland Preserve, and bikes would be prohibited except along the FORTAG alignment.

From Canyon Del Rey/SR 218 near the Del Rey Oaks City Hall, the Trail would extend northeast up Carlton Drive to Plumas Avenue. At Plumas Avenue, the Trail would extend within a PG&E easement along the south side of Plumas Avenue west toward Del Rey Woods Elementary School and east to the top of Plumas Avenue near General Jim Moore Boulevard. Along Canyon Del Rey Boulevard/SR 218 the Trail would also continue east along the south side of Del Rey Park, along the existing paved Angelus Way right-of-way, and then through Work Memorial Park to the Safeway Shopping Center. Adjacent to the Safeway market, the Trail would abut Canyon Del Rey Boulevard/SR 218, crossing Fremont Boulevard within the existing intersection crosswalk. At this location FORTAG would connect with the planned North Fremont Street Bicycle and Pedestrian Project in Monterey. On the west side of Fremont Boulevard, the Trail would switch back into Laguna Grande Regional Park, traversing the southwestern side of Laguna Grande in the City of Monterey, before crossing Del Monte Boulevard to connect with the Recreation Trail at Roberts Lake Park.

Ryan Ranch Segment

From the southern terminus of the National Monument segment, the Ryan Ranch segment would extend southeast toward Ryan Ranch, crossing South Boundary Road at Rancho Saucito. This segment would connect the main FORTAG spine with employment areas in the Ryan Ranch Business Park in the City of Monterey.

1.2.1 Project Construction

Timing and Duration

Construction for the first phase of FORTAG is estimated to begin in 2020, with an estimated completion date (for this phase) of 2021. Additional construction could continue for several years, depending upon funding availability and participation of the underlying jurisdiction. A total project construction schedule has not been finalized and is subject to funding availability and other considerations. Three miles of Canyon Del Ray/SR 218 segment would be constructed first from 2020 to 2021 followed by most of the other segments from 2022 to 2024. Remaining Trail segments would be constructed after 2024 as funding becomes available.

General Methodology

In general, construction activities for the project would include excavation of material sources, clearing and grubbing, grading, placement of aggregate base and asphalt concrete, revegetation, installation of signs, and installation of lighting and other safety related features necessary to meet current design practice. Large construction equipment would include Trail dozers, skid steers, narrow track loaders, rollers, and vibrating plate compactors. High visibility fencing will be used to delineate the limits of work and construction impacts in natural habitats.

Most of the Trail would be composed of a four-inch layer of asphalt concrete over a six-inch aggregate base. An estimated 42,000 tons of asphalt concrete are expected to be used to construct the Trail.

The following best management practices would be implemented during project construction to comply with the Monterey Bay Air Resources District's Rule 402 (Nuisance) and CEQA Guidelines:

- Prohibit all grading activities during periods of high wind (over 15 mph)
- Water active construction areas as needed based on the activity, soil and wind exposure
- Apply chemical soil stabilizers on inactive construction areas (disturbed lands unused for four consecutive days)
- Apply native hydro-seed or non-toxic binders to exposed areas after cut/fill operations
- Maintain at least 2-foot freeboard in haul trucks, and cover all trucks hauling dirt, sand, or other loose materials
- Plant native vegetative ground cover in disturbed areas as soon as possible, in coordination with mitigation planting requirements identified in this EIR for biological resources
- Cover inactive storage piles

In undisturbed areas as much as practical, limit the construction zone to a 20-foot corridor to minimize impacts to habitat and wildlife

Construction Staging

Construction staging areas would be located on existing pavement and disturbed areas adjacent to Trails. Staging areas would include existing parking lots adjacent to the Trail, vacant or abandoned parking lots at CSUMB, and cleared areas from Fort Ord construction areas. Roadway shoulders would be used for construction staging where lots or cleared areas are not available adjacent to the work site. Construction staging areas would be located at least 50 feet from waterways and would include erosion control Best Management Practices, such as fiber rolls. Dust control measures, such

as watering, would be implemented at staging areas during construction to reduce fugitive dust and construction would be limited to daytime hours.

2 Methodology

2.1 Regulatory Overview

Regulated or sensitive resources studied and analyzed herein include special status plant and animal species, nesting birds and raptors, sensitive plant communities, jurisdictional waters and wetlands, wildlife movement, and locally protected resources, such as protected trees. Regulatory authority over biological resources is shared by Federal, State, and local authorities. Primary authority for regulation of general biological resources lies within the land use control and planning authority of local jurisdictions.

2.1.1 Definition of Special Status Species

For the purposes of this report, special status species include:

- Species listed as threatened or endangered under the Federal Endangered Species Act (FESA); species that are under review may be included if there is a reasonable expectation of listing within the life of the project
- Species listed as candidate, threatened, or endangered under the California Endangered Species Act (CESA)
- Species designated as Fully Protected, Species of Special Concern, or Watch List by the California Department of Fish and Wildlife (CDFW)
- Species designated as sensitive by the U.S. Forest Service or Bureau of Land Management, if the project would affect lands administered by these agencies
- Species designated as locally important by the Local Agency and/or otherwise protected through ordinance or local policy.

2.1.2 Environmental Statutes

For the purpose of this report, potential impacts to biological resources were analyzed based on the following statutes (Detailed discussions included in Appendix B):

- California Environmental Quality Act (CEQA)
- Federal Endangered Species Act (FESA)
- California Endangered Species Act (CESA)
- Federal Clean Water Act (CWA)
- California Fish and Game Code (CFGF)
- Migratory Bird Treaty Act (MBTA)
- The Bald and Golden Eagle Protection Act
- Porter-Cologne Water Quality Control Act
- Fort Ord Habitat Management Plan (HMP) (1997a)
- Fort Ord Habitat Conservation Plan (HCP) (in progress)
- FORA Base Reuse Plan (1997b)

- FORA Base Reuse Plan Reassessment (2012)
- City of Seaside Local Coastal Program (LCP) (2013)
- City of Seaside Municipal Code (Chapter 8.54, Trees)
- City of Seaside General Plan
- California Coastal Act Marina
- City of Marina Municipal Code
- City of Monterey General Plan (2005)
- City of Monterey Municipal Code
- City of Monterey Local Coastal Program
- City of Del Rey Oaks Municipal Code
- Monterey County Municipal Code
- Current 2007 California State University Master Plan
- Draft 2017 California State University Master Plan
- Monterey Peninsula Regional Parks District (MPRPD) Master Plan

2.1.3 Jurisdictional Waters Regulations

Drainage ditches, seasonal wetlands, ephemeral and perennial streams, and seasonally flooded constructed basins in the Study Areas may be jurisdictional waters of the U.S. under CWA Sections 404 and 401, subject to USACE and RWQCB jurisdictions. In addition, the aquatic resources have defined beds, banks, and/or riparian habitats that are potentially under CDFW jurisdiction. Note the final jurisdictional determinations of the boundaries of waters, and riparian habitats, are made by each agency, typically at the time that authorizations to impact such features are requested.

2.1.4 Guidelines for Determining CEQA Significance

The following threshold criteria, as defined by the CEQA Guidelines Appendix G, were used to evaluate potential environmental effects. Based on these criteria, the proposed project would have a significant effect on biological resources if it would:

- a) *Have substantial adverse effects, either directly or through habitat modifications, on any species identified as a candidate, sensitive or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service.*
- b) *Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, and regulations or by the California Department of Fish and Wildlife or US Fish and Wildlife Service.*
- c) *Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means.*
- d) *Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites.*
- e) *Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance.*

- f) *Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional or state habitat conservation plan.*

2.2 Biological Study Area

The Biological Study Area (BSA) for this project is defined as the Trail alignment, plus a 50-foot buffer on either side, and additional areas that were identified for analysis, to allow for flexibility at later stages of design, and to support avoidance of sensitive biological resource through Trail design where feasible. This resulted in an irregular study area that generally occurs as a 100-foot wide corridor with various areas in which the corridor has been expanded. The BSA is depicted on Figure 3 (Appendix A). Throughout this report the BSA refers to the defined study area, which represents an area far broader than the impact area that would result from Trail development. The 16-foot wide Trail (8 feet on either side of the Trail centerline) as currently defined is herein referred to as the “Trail corridor.” The BSA did not include the associated greenway, as no project development is proposed for this area.

2.3 Literature Review

Prior to field surveys, Rincon conducted a literature review to characterize the nature and extent of biological resources on and adjacent to the BSA. The literature review included an evaluation of current and historical aerial photographs of the site (Google Earth 2018), regional and site-specific topographic maps, climatic data, and other available background information.

Queries of the U.S. Fish and Wildlife Service (USFWS) Information for Planning and Consultation system (IPaC; UFWS 2019), CDFW California Natural Diversity Database (CNDDDB; 2019a), and California Native Plant Society (CNPS) online Inventory of Rare and Endangered Plants of California (2019) were conducted to obtain comprehensive information regarding State and federally listed species, as well as other special status species, considered to have potential to occur within the *Marina and Seaside, California* USGS 7.5-minute topographic quadrangles and the surrounding ten quadrangles (Salinas, Monterey, Moss Landing, Prunedale, San Juan Bautista, Natividad, Spreckels, Carmel Valley, and Mt. Carmel). The results of database-queries and lists of special status species were reviewed by Rincon’s regional biological experts for accuracy and completeness. The final list of special status biological resources to be evaluated is the result of documented occurrences within the 12-quad search area and species known to occur in the region based on the biologists’ expert opinions. The results of the species potential-to-occur assessment were compiled into a table presented as Appendix E.

The following resources were reviewed for additional information on existing conditions relating to biological resources along the Trail corridor:

- Aerial photographs of the maintenance sites and vicinity
- United States Department of Agriculture (USDA), Natural Resources Conservation Service (NRCS) Web Soil Survey (2010)
- USFWS Critical Habitat Portal (2019a)
- CDFW CNDDDB map of State and federally listed species that have been previously documented within a 5-mile (8-kilometer) radius of the project sites (2019a)
- CDFW Biogeographic Information and Observation System (BIOS 2019b)
- CNDDDB Special Vascular Plants, Bryophytes, and Lichens List (2018)

2.4 Desktop Mapping

Prior to conducting field surveys, Rincon developed detailed vegetation community and land-cover-type maps based on a review of aerial imagery and existing data on mapped vegetation communities on the FORA. The purpose of the preliminary desktop mapping was to identify approximate boundaries of vegetation communities and make preliminary assessments of areas likely to support sensitive biological resources. The preliminary assessments help to prioritize fieldwork activity and inform the field-based mapping of vegetation communities.

2.5 Field Reconnaissance Survey

The reconnaissance-level field surveys were conducted by Senior Biologists Samantha Kehr and Kyle Weichert on March 28 and 29, 2019, ~~and by Samantha Kehr, Kyle Weichert, and Associate Biologist Beth Wilson on June 18, 19, and 20, 2019, and by Senior Biologists Samantha Kehr and Associate Biologist Carolynn Daman on February 28, 2020.~~ The surveys consisted of pedestrian surveys of each Trail section containing natural habitats combined with windshield surveys of entirely developed areas, to document and field-verify vegetation communities and site conditions. During surveys, the biologists field-verified, refined and mapped the boundaries of vegetation communities and other land-cover types, documented the approximate limits of jurisdictional waters (waters of the state and waters of the U.S., including basins, drainages, vernal pools, ponds, lakes, and creeks as applicable), mapped occurrences of incidental observation of special status species (including state and federal listed species), and developed a list of observed plants and wildlife. Definitive surveys to confirm the presence or absence of special status species were not performed and are not included with this analysis. Definitive surveys for special status plant and wildlife species generally require specific survey protocols, extensive field survey time, and are conducted only at specific time periods of the year.

2.6 Hydrology

The hydrology of the BSA and individual Trail segments was evaluated through a review of topographic maps, aerial photos, existing documents (e.g., Canyon del Rey Master Drainage Plan, Salinas River Watershed Management Action Plan, Frog Pond Wetland Preserve Enhancement and Erosion Control Plan), and the National Hydrography Dataset (NHD) and California Department of Water Resources Water Management Planning Tool (USGS 2019; CDWR 2019).

2.7 Existing Conditions and Impact Assessments

Existing conditions of the project site were assessed based on a review of background literature, aerial imagery, and the results of the reconnaissance survey. This information was compiled into maps and written descriptions of vegetation communities that form the foundation of the analysis for special status species potential to occur. The presence of any sensitive vegetation communities, jurisdictional areas or other special status biological resources within the BSA was documented as part of the analysis and is included in maps and the technical discussions. Based on the types and condition of vegetation communities present within the BSA, Rincon conducted a habitat assessment for special status species and determined the potential for special status species to occur within the BSA. The impact analysis to address the CEQA Appendix G checklist items outlined under Section 2.13 is based on the presence of, or potential for occurrence of special status

biological resources in the context of the proposed development (including the construction and use of the Trail).

Potential impacts to California tiger salamander (CTS) upland habitat was evaluated based on a desktop analysis of potential breeding habitat within 1.3 miles (dispersal distance for CTS; USFWS 2017) of the BSA. All identifiable sites with potential to support CTS breeding were mapped, and buffered with a 1.3-mile buffer. The area defined by the buffered potential breeding sites was overlain on the vegetation communities mapping for the BSA, and the total acres of suitable upland habitat (non-native annual grassland) that overlaps the 1.3-mile buffer areas was calculated as the total potential impacts to CTS upland habitat.

This page intentionally left blank.

3 Existing Conditions

3.1 Physical Characteristics

Elevations within the BSA range from approximately 15 to 520 feet (4.5 to 158.5 meters) above mean sea level (msl). The climate in this region is generally mild with an annual minimum average temperature of 48 degrees F, a maximum average temperature of 65 degrees F, and an average annual precipitation of 19.73 inches (NOAA, 2019). The topography of the BSA includes coastal alluvial terraces and relatively low-lying rolling dune-like hill systems near the coast composed from stabilized sand. The portions of the BSA that extend through Fort Ord are composed primarily of natural habitats, while portions of the BSA extend into urban areas on the CSU Monterey Bay campus and in the Cities of Seaside and Marina. Commercial agricultural lands border the northern portions of the BSA.

3.1.1 Watershed and Drainages

There are two watersheds located within the BSA, Canyon Del Rey and Salinas River (USGS 2019; CDWR 2019). The Salinas River watershed can be further split into two sub-watersheds, which are unnamed, and therefore discussed in this report based on relative location, north or south. The Trail segments are located within three sub-watersheds as follows:

Canyon Del Rey

- Ryan Ranch
- Canyon Del Rey/218
- National Monument Loop

Salinas River – South

- CUSMB North and CSUMB South segments are located entirely within the southern Salinas River subwatershed
- Northern portions of the National Monument Loop
- Southern sections of the Northern Loop and Northern Marina segments

Salinas River – North

- Small portions of the Northern Marina and Northern Loop segments

Canyon del Rey Sub-watershed

The Canyon del Rey sub-watershed (HUC 12-180600150304) occurs in the south end of the BSA. Canyon del Rey Creek (also referred to as Arroyo del Rey Creek) is an ephemeral stream that flows to the Pacific Ocean, draining approximately 17 square miles (approximately 10,750 acres) of land surface, including portions of the cities of Seaside, Del Rey Oaks, Monterey, and unincorporated Monterey County (Balance Hydrologics 2014).

The headwaters of Canyon del Rey Creek originate at an elevation of 500 feet near the Laguna Seca Raceway at the eastern end of the watershed (Balance Hydrologics 2014). The creek flows mostly westerly along Highway 68 until the junction of Highway 68 with Highway 218. At the highway junction, the creek follows Highway 218 north and west to the Frog Pond Wetland Preserve, eventually draining into Laguna Grande, then Roberts Lake, and finally, the Monterey Bay.

The Frog Pond Wetland Preserve, located approximately 2.2 river miles (3.5 km) upstream of Monterey Bay, is within the Canyon del Rey sub-watershed. The entire preserve is 17 acres in size and sustains both a seasonal pond, wetland, and upland habitats. The pond/wetlands are an isolated remnant of a much larger freshwater ecosystem, but still retains important wetland structures and functions. The pond receives water from three general sources: 1) a tributary to Canyon del Rey (South Boundary Tributary); 2) springs at the northern edge of the pond; and 3) runoff from the residential neighborhoods along the northern border of the preserve. The pond typically dries in mid to late summer, and refills after the first significant rains in the fall. Canyon del Rey Creek maintains low flows throughout the summer, fed by runoff from residential and golf course irrigation.

Within 1.2 miles of Monterey Bay, the creek passes through a long culvert at Work Memorial Park and into Laguna Grande, a lake approximately 12 acres in size (Balance Hydrologics 2014). This freshwater lake and adjacent freshwater marsh at Laguna Grande Park are part of a complex hydrological system that also includes Roberts Lake and Monterey State Beach, both downstream of Laguna Grande. Water from Laguna Grande flows to Roberts Lake via the Laguna Del Rey outfall. Both lakes are shallow (approximately nine [9] feet at the deepest point), and the bottoms of the basins are generally flat with a few small islands. Water from the lakes eventually flows to Monterey Bay at Monterey State Beach via a box culvert outfall.

Other wetlands within the Canyon del Rey watershed including an adjacent wetland west of Angelus Way, behind a plant nursery and a vernal pool mapped on the USFWS National Wetlands Inventory (NWI). Historical photography indicates the vernal pool area has been highly disturbed from past from grading activities, and no vernal pool species (plant or wildlife) were identified in this area during the reconnaissance survey. Several detention basins were also identified during the reconnaissance survey, located along California Avenue and Estrella Del Mar Way in Marina and 9th Street in Seaside.

Salinas River

The watershed of the Salinas River and its tributaries covers approximately 4,600 square miles (approximately 3 million acres) and lies within San Luis Obispo and Monterey Counties (CCRWQCB 1999). The Salinas River originates in San Luis Obispo County, and flows 152 miles northward into Monterey County through the entire length of the Salinas Valley and empties into Monterey Bay near Marina. The Salinas River lies between the Gabilan range to the east and the Santa Lucia and Sierra de Salinas ranges to the west (RCDMC 2019). The drainages in these mountain ranges contribute water to the Salinas River via the main tributaries that include the Arroyo Seco, Nacimiento, San Antonio, and Estrella Rivers.

The upper watershed of the Salinas River begins in San Luis Obispo County at the headwaters in the La Panza Range (southeast of Santa Margarita Lake) and flows to the narrows area near Bradley, just inside Monterey County (RCDMC 2019). The BSA is located within the lower portion of the watershed, which is typically considered to include the Bradley narrows area and downstream to Monterey Bay (including the Arroyo Seco River). Two unnamed sub-watersheds of the Salinas River are identified within the BSA (CDWR 2019). The southern sub-watershed (HUC 12-180600150305)

stretches from approximately the Fremont Boulevard exit off of Highway 1 north to, and including, the Marina Municipal Airport. A small section of the northern portion of the BSA is located within the northern sub-watershed (HUC 12-180600051509), which encompasses a small area between the Marina Municipal Airport and the Salinas River.

3.1.2 Soils

The USDA-NRCS has mapped seven soil units within the BSA: Arnold loamy sand 9 to 20 percent slopes, Arnold loamy sand 15 to 50 percent slopes, Arnold- Santa Ynez Complex, Baywood sand, 2 to 15 percent slopes, Oceano loamy sand, 2 to 15 percent slopes, Rindge muck, 0 to 2 percent slopes, and Xerorthents, dissected (USDA-NRCS, 2010). Soils are depicted on Figure 4 (Appendix A) Arnold loamy sand is somewhat excessively drained sandy soil that occurs on terraces. It is formed of residuum weathered from sandstone. This soil type is found exclusively along the Canyon Del Rey/SR 218 segment at the southern extent of the BSA. The Arnold- Santa Ynez Complex is comprised of two well drained soils; Arnold (40 percent) and Santa Ynez (25 percent), with 25 percent minor components. These soils are not considered hydric. Arnold soils are derived from Residuum weathered from sandstone and occur on hills and escarpments. The Arnold-Santa Ynez Complex underlays small portions of the National Monument Loop and Canyon Del Rey/SR 218 segments and the majority of the Ryan Ranch segment.

Baywood sand is somewhat excessively drained soils derived from stabilized sandy eolian, or windblown, sands. This soil map unit typically lacks hydric soils. Every Trail segment, with the exception of the Northern Marina segment, is made up in part by Baywood sand soils. Oceano loamy sand is found on rolling dune-like hills and is derived from stabilized eolian sands. A typical profile consists of loamy sand to 80 inches. This soil is somewhat excessively drained, with low available water storage, and is not considered hydric. Oceano loamy sand underlays most segments of the Trail except for the southern extent of the BSA including the Canyon Del Rey/SR 218 and Ryan Ranch segments.

Rindge muck is very poorly drained soil derived from plant residue with mixed alluvium. This soil map unit typically has a slope of 0 to 2 percent and approximately 90 percent hydric soils. Rindge muck soil is found exclusively along the Canyon Del Rey/SR 218 segment at the southern extent of the BSA. Xerorthents, dissected are steep to extremely steep soils on bluffs along major rivers, on steep escarpments of fans and terraces, and on the banks of deeply entrenched streams and gullies that have narrow bottoms. These soils consist mostly of unconsolidated or weakly consolidated alluvium with sandy loam or coarse sandy loam and are not considered hydric. This soil type is only found along the steep slopes running along the Northern Loop segment. Of these six soil types Baywood sand and Oceano loamy sand primarily represent make up the predominant soils of the BSA.

3.2 Vegetation and Other Land Cover

Twenty-eight (28) terrestrial vegetation communities or other land cover types were identified within the BSA during field surveys. In many cases one community grades into another and the boundaries demarking these communities can be indeterminate and subject to interpretation. The limits of these vegetation communities were approximately delineated and mapped based on estimates of the percent cover of the dominant species, and often adjacent communities have the same general species composition in differencing abundances. For example, non-native annual grassland may include a percentage of coyote brush (*Baccharis pilularis*), and adjacent coyote brush

scrub may include a percentage of non-native grasses. Oak trees were common throughout much of the BSA, in some areas forming oak woodland communities, and in others, simply occurring as scattered occurrences of oak trees in scrub, grassland or other communities. The mapping is presented in a land-cover map atlas (Appendix A, Figure 5), and provides a reasonable approximation of the types and acreages of the various vegetation communities and land-cover types that occur within the BSA. The following vegetation communities were mapped within the BSA:

- Iceplant mat
- Agriculture
- Landscaped, includes:
 - Monterey cypress
 - Monterey pine
- Arroyo willow
- Bare ground/Disturbed
- Maritime Chaparral, composed of:
 - Manzanita chaparral
 - Sandmat manzanita chaparral
- Black sage scrub
- Chamise – black sage chaparral
- Chamise chaparral
- California sagebrush scrub
- Developed
- Dune scrub
- Eucalyptus
- Non-native annual grassland
- Mixed Monterey pine - oak woodland
- Coastal oak sage scrub
- Coast live oak woodland
- Ephemeral pond
- Riparian woodland
- Ruderal
- Emergent wetland
- Open water
- Burn succession
- Coyote brush scrub
- Detention basin

The vegetation community characterizations for this analysis were based on the classification systems presented in *A Manual of California Vegetation, Second Edition* ([MCV2] Sawyer et al. 2009) but have been modified slightly to most accurately reflect the existing site conditions. The *Preliminary Description of Terrestrial Natural Communities of California* (Holland 1986) has been superseded by the MCV2, but is included for consistency with previous descriptions of the former Fort Ord. Many of the vegetation communities discussed below represent large areas which may be geographically isolated from one another, therefore lesser species components and overall cover may be highly variable from one location to the next. Representative photographs of the BSA are included in Appendix C. Plant species nomenclature and taxonomy used for this BRA follows the treatments within the second edition of *The Jepson Manual* (Baldwin et al. 2012).

Non-Native Annual Grassland

The BSA contain approximately 151.82~~51.6~~ acres of non-native annual grassland, with approximately 4.75~~0~~ acres occurring within the current Trail corridor (not including options). This community is typically comprised of annual grasses and forbs introduced during and since the Spanish colonial period. This community most closely resembles the *Avena (barbara, fatua)* Semi-Natural Herbaceous Alliance described by Sawyer et al. (2009). Species composition in this community is highly variable and may contain occasional native or ornamental trees and shrubs, however non-native grasses are dominant, including wild oats (*Avena fatua* and *Avena barbata*), ripgut brome (*Bromus diandrus*), red brome (*Bromus madritensis ssp. rubens*), rattail fescue

(*Festuca myuros*), Italian rye (*Festuca perennis*), and foxtail barley (*Hordeum murinum* var. *leporinum*). Some native plant species are also present and include common yarrow (*Achillea millefolium*), sky lupine (*Lupinus nanus*) tarweeds (*Deinandra* spp.), golden stars (*Bloomeria crocea*), golden Brodiaea (*Triteleia ixioides*), soap plant (*Chlorogalum pomeridianum*), purple clarkia (*Clarkia purpurea*), purple owl's clover (*Castilleja exserta* ssp. *exserta*), and shooting star (*Primula clevelandii*). Patches of native perennial grasses are intermixed in some areas at low cover, and include blue wildrye (*Elymus glaucus*), valley wild rye (*Leymus triticoides*), , and pine bluegrass (*Poa secunda*).

As described above, the dominant components of this vegetation type are not native to California. While some invasive plants may have been first introduced during the 16th century as Spanish explorers came to California's coast, it is likely that the majority of invasive plants were introduced after people of Old-World descent began to settle in California. Rapid land use change during the mid- to late-1800s, along with other interacting factors, accelerated the invasion of California's native grassland by species of European origin. The intensification of livestock grazing both brought in new species for livestock forage and prompted the spread of invasive species in California grasslands (Caziarc 2012). Within the BSA this community is widely distributed and was observed in all Trail segments.

Landscaped

The BSA contain approximately ~~35.6~~33.97 acres of landscape, with approximately ~~1.98~~ acres occurring within the current Trail corridor (not including options). This land cover type is not naturally occurring and is not described in either the Holland (1986) or Sawyer et al. (2009) classification systems. It consists of primarily non-native species in ornamental plantings. Tree species found in this community are highly variable, and typically consist of either non-native (ornamental) species or native species that were planted, and not part of a natural community. The most commonly occurring tree species within this community include Monterey cypress (*Hesperocyparis macrocarpa*), eucalyptus (*Eucalyptus* spp.), Monterey pine (*Pinus radiata*), redbud (*Cercis* sp.), California sycamore (*Platanus* ~~19~~Racemose), and American sweetgum (*Liquidambar styraciflua*). Bushes and shrubs in this community are variable by occurrence and include oleander (*Nerium oleander*), lantanas (*Lantana* spp.), and juniper (*Juniperus* spp.) among other ornamental species. Landscape grass species typically include turf grasses and nonnative species such as kikuyu grass (*Pennisetum clandestinum*), hairy crabgrass (*Digitaria sanguinalis*), and English daisy (*Bellis perennis*).

Monterey pine and Monterey cypress are native species considered sensitive when occurring in natural stands or woodlands; however, there are few naturally occurring stands of these species in Seaside. Most individuals present within the BSA are ornamental plantings or offspring established or recruited from ornamental plantings. This community is primarily associated with development on the western side of the BSA, and was mainly observed along the Canyon Del Rey/SR 218, CSUMB Loop North, CSUMB Loop South, and the Northern Marina Trail segments. Some isolated stands that may be remnants of natural woodland, but the history of those stands couldn't be determined, and they no longer function as a natural woodland. One such stand of Monterey cypress is present along Divarty Street between 1st and 2nd Avenues. The canopy consists of mature Monterey Cypress that appear to be the results of recruitment from a windrow planted decades ago or potentially remnants of a naturally occurring stand and no longer functions as a natural woodland.

Iceplant Mat

The BSA contain approximately 51 acres of iceplant mat, with approximately 3.5 acres occurring within the current Trail corridor (not including options). This community most closely resembles the *Carpobrotus edulis* or Other Iceplant Semi-Natural Herbaceous Stand Alliance described by Sawyer et al. (2009). Iceplant (*Carpobrotus edulis*) is non-native invasive species, originally planted in the 1940s and 50s for landscaping and dune stabilization (USACE 1992). These perennial ground-hugging succulents form large monospecific mats (Sawyer et al. 2009). Iceplant has a Cal ICP rating of “High” for its invasive tendencies. This hardy species spreads readily from landscaped areas into dune and scrub habitats, out competing native species for space, nutrients, and moisture.

This vegetation type is strongly dominated by iceplant, and often consists of dense matted tangle many inches thick. Due to this aggressive growth form, not many other species are present in most instances. In some locations iceplant is the dominate species in the understory growing in gaps between trees or shrubs. At other locations within the BSA some native species, ornamental plantings, and bare patches were observed in this community. Within the BSA this community is widely distributed and was observed in all Trail segments, and often occurs in smaller patches within other community types. Where it occurred as the dominant species over a substantial area, it was mapped as a community of its own.

Agriculture

The BSA contain approximately 4.5 acres of agricultural lands, with approximately 0.4 acre occurring within the current Trail corridor (not including options). This land cover type is not naturally occurring and is not described in either the Holland (1986) or Sawyer et al. (2009) classification systems. This land cover type includes planted crop lands and actively farmed land. Within the BSA this land cover type was comprised of strawberry fields along the Northern Marina Trail segment. This community provides foraging opportunities for some wildlife such as songbirds and bats but provides very little habitat value in terms of shelter.

Coast Live Oak Woodland

The BSA contain approximately 142 acres of coast live oak woodland, with approximately 10.8 acres occurring within the current Trail corridor (not including options). The oak woodland habitat is characterized by coast live oak trees found in monotypic stands and most closely corresponds with the *Quercus agrifolia* Woodland Alliance in the Manual of California Vegetation system (Sawyer et al. 2009). Within the BSA this community is highly variable, but is generally dominated by coast live oak (*Quercus agrifolia*) with an understory that ranged from dense scrub to open and underdeveloped. Typical scrub understory constituents include scrub or chaparral species such as black sage (*Salvia mellifera*), chamise (*Adenostoma fasciculatum*), coyote brush, woolly leaf manzanita (*Arctostaphylos tomentosa*), and California sagebrush (*Artemisia californica*). In other areas, the understory was dominated by a tangle of viny herbs such as poison oak (*Toxicodendron diversilobum*) and purple fiestaflower (*Pholistoma auritum*), or annual grasses. Oak woodlands and savannas support the greatest species richness of any vegetation type in the state and are considered important habitats (Barbour et al. 2007). This community is widely distributed and was observed within the BSA along the Northern Loop, National Monument Loop, CSUMB Loop North, CSUMB Loop South, and Canyon Del Rey/218 segments.

Riparian Woodland

The BSA contain approximately 6.75 acres of riparian woodland, with approximately 0.54 acre occurring within the current Trail corridor (not including options). This vegetation community most closely corresponds with the *Quercus agrifolia* Woodland Alliance and *Alnus rhombifolia* Forest Alliance in the Manual of California Vegetation system (Sawyer et al. 2009). It primarily occurs along Canyon Del Rey Creek and consists of a canopy dominated by several riparian tree species including coast live oak, arroyo willow (*Salix lasiolepis*), and white alder (*Alnus rhombifolia*). The understory varies with location within the BSA, but typically contains common riparian understory species such as stinging nettle (*Urtica dioica*) and poison oak. The riparian woodland habitat along Angelus Way includes coast redwood (*Sequoia sempervirens*) in the canopy and contains an understory dominated by English ivy (*Hedera helix*), and invasive French broom (*Genista monspessulana*) with occasional native understory herbs and ferns such as wood fern (*Dryopteris arguta*). Infestations of Himalayan blackberry (*Rubus armeniacus*), English ivy, cape ivy (*Delairea odorata*) and garden nasturtium (*Tropaeolum majus*) are also present in a patchy distribution within the understory.

Chamise Chaparral

The BSA contain approximately 13.6 acres of chamise chaparral, with approximately 0.7 acre occurring within the current Trail corridor (not including options). This vegetation community most closely resembles the *Adenostoma fasciculatum* Shrubland Alliance described by Sawyer et al. (2009). It consists of a dense, woody shrub layer with few trees and an open canopy. Chamise (*Adenostoma fasciculatum*) is dominant, with Eastwood's manzanita (*Arctostaphylos glandulosa*), brittleleaf manzanita (*Arctostaphylos crustacea*), , sticky monkey flower (*Mimulus aurantiacus*), California buckwheat (*Eriogonum fasciculatum*), oaks (*Quercus* spp.), toyon (*Heteromeles arbutifolia*), black sage (*Salvia mellifera*), and poison oak intermixed in locally varying abundances. This community was observed along the National Monument Loop and Ryan Ranch segments.

Maritime Chaparral

Maritime chaparral classification as defined by Holland (1986) consist of sclerophyllous scrub species in sandy soils dominated by manzanita. As with other chaparral and scrub habitats within the BSA, maritime chaparral was highly variable and mapped as two separate vegetation subtypes: manzanita chaparral and sandmat manzanita chaparral. The BSA contain approximately 35.6 acres of manzanita chaparral, with approximately 1.8 acres occurring within the current Trail corridor (not including options). The BSA also contains approximately 1.9 acres of sandmat manzanita chaparral, with approximately 0.1 acre occurring within the current Trail corridor. The

Much of the maritime chaparral was mapped as a manzanita chaparral subtype and most closely resembles the *Arctostaphylos (crustacea, tomentosa)* Shrubland Alliance described by Sawyer et al. (2009). Within the BSA, this community is primarily found on former Fort Ord lands. Maritime chaparral is a fairly open fire dependent community, and within the BSA was typically dominated by woollyleaf manzanita (*Arctostaphylos tomentosa*), with black sage, coyote brush, brittleleaf manzanita (*Arctostaphylos crustacea*), toyon, and ceanothus (*Ceanothus* spp.) While similar to the chamise chaparral vegetation community, this chaparral community is distinguished by a manzanita-dominant composition. Special status plant species sandmat manzanita (*Arctostaphylos pumila*; California Rare Plant Rank [CRPR] List 1B.2) was also present in varying concentrations within the maritime chaparral mapped within the BSA.

In some areas, sandmat manzanita was dominant in the shrub canopy. These areas were mapped as a sandmat manzanita chaparral subtype and most closely resembles the *Arctostaphylos pumila* Provisional Shrubland Alliance described by Sawyer et al. (2009). In this community, the shrub canopy was dense and low, dominated by sandmat manzanita with lesser components of black sage, chamise, ceanothus and coyote brush. Sandmat manzanita typically occurred in locally concentrated patches compared to the more widespread manzanita chaparral subtype. Maritime chaparral community occurs primarily on the former Fort Ord and were observed in the BSA along the National Monument Loop segment.

Black Sage Scrub

The BSA contain approximately ~~56.35~~2-acres of black sage scrub, with approximately 3.3 acres occurring within the current Trail corridor (not including options). This vegetation community most closely resembles the *Salvia mellifera* Shrubland Alliance described by Sawyer et al. (2009). Black sage scrub within the BSA is dominated by black sage, with lesser components of chamise, California sagebrush, manzanita, and coyote brush. This vegetation community is similar to chamise chaparral, with black sage as the dominant component the shrub canopy. Black sage scrub was generally quite dense and mature, within the BSA with the shrub canopy standing over five feet in height in many places. In many places this habitat type transitioned to intergrade between similar vegetation communities including chamise chaparral, California sagebrush scrub, and coyote brush scrub. This community was only observed at the southern end of the National Monument Loop segment and the Ryan Ranch segment; however, the same primary constituents of this community were present in varying concentrations throughout much of the BSA.

Chamise – Black Sage Chaparral

The BSA contain approximately 24.5 acres of chamise - black sage chaparral, with approximately 1.3 acres occurring within the current Trail corridor (not including options). This vegetation community is primarily present within the BSA in areas where the black sage scrub community interfaces with the chamise chaparral community. This vegetation community most closely resembles the *Adenostoma fasciculatum* - *Salvia mellifera* Shrubland Alliance described by Sawyer et al. (2009). Chamise – black sage chaparral is characterized by chamise and black sage as co-dominant in the shrub canopy with lesser components of ceanothus, California sagebrush, manzanita, and coyote brush throughout. This community was only observed at the southern end of the National Monument Loop segment.

California Sagebrush Scrub

The BSA contain approximately 12.4 acres of California sagebrush scrub, with approximately 0.9 acre occurring within the current Trail corridor (not including options). This vegetation community most closely resembles the *Artemisia californica* Shrubland Alliance described by Sawyer et al. (2009). It is dominated by California sagebrush, and generally includes smaller shrub species such as coyote brush, monkey flower, and deer weed (*Acmispon glaber*), with annual grasses or herbs in the opening between shrubs. Although it contains constituents of the chaparral communities, this vegetation type is typically more open and low-lying than the chaparral observed in the BSA. This community is typically located in openings within the coast live oak woodland and along the existing foot paths within the BSA along the Northern Loop and Northern Marina Trail segments.

Coyote Brush Scrub

The BSA contain approximately 27 acres of coyote brush scrub, with approximately 1.9 acres occurring within the current Trail corridor (not including options). This vegetation community most closely resembles the *Baccharis pilularis* Shrubland Alliance described by Sawyer et al. (2009). The shrub canopy is dominated by coyote brush but in many places within the BSA contains other shrubs such as deer weed, and California sagebrush, and occasional coast live oak trees. The shrub canopy is generally relatively open with a scattered distribution of shrubs with annual grasses such as wild oats and bromes, and annual herbs such as filaree (*Erodium cicutarium*) and in gaps between shrubs. This community was observed within the BSA along the Northern Loop and Northern Marina segments.

Dune Scrub

The BSA contain approximately 42.7 acres of dune scrub, with approximately 1.6 acres occurring within the current Trail corridor (not including options). This vegetation community most closely resembles the *Lupinus albifrons* Shrubland Alliance described by Sawyer et al. (2009). It consists primarily of relatively low-lying shrub species such as California buckwheat, mock heather (*Ericameria ericoides*), silver dune lupine (*Lupinus albifrons*) and sandmat manzanita in a generally open distribution with grasses such as veldt grass (*Ehrharta calycina*), iceplant, and herbs such as beach evening primrose (*Camissoniopsis cheiranthifolia*) and sand mat (*Cardionema ramosissimum*), and bare sandy soil between shrubs. Special status plants species sandmat manzanita was observed as common within most of the dune scrub mapped within the BSA. Within some localized areas, sandmat manzanita was the dominant species, but patches were too small or localized to map as sandmat manzanita scrub. Dune scrub vegetation community was primarily mapped along the National Monument Loop segment.

Coastal Oak Sage Scrub

The BSA contain approximately 4.3 acres of coastal oak sage scrub, with approximately 0.3 acre occurring within the current Trail corridor (not including options). This community is not described by Holland (1986) or Sawyer et al. (2009), but is comprised of coast live oak, California sagebrush, and coyote brush in equal dominance. The vegetation community generally formed an intergrade between coast live oak woodland and California sagebrush scrub or coyote brush scrub communities. Coast live trees were present within the tree canopy, but not at a dense enough distribution to function as a woodland. This community was observed within the BSA along the Northern Loop segment.

Mixed Monterey Pine – Oak Woodland

The BSA contain approximately 2.98 acres of mixed Monterey pine - oak woodland, with approximately 0.1 acre occurring within the current Trail corridor (not including options). This community is not described by Holland (1986) or Sawyer et al. (2009); however, this vegetation community is best described by the *Quercus agrifolia* – *Toxicodendron diversilobum* Alliance by Sawyer et al. This vegetation community includes a wooded portion of the BSA containing a canopy with coast live oak and Monterey pine occurring as codominant. The understory is fairly underdeveloped consisting mostly of bare soil and scattered shrubs such as deer weed and coyote brush, non-native grasses, and mats of iceplant. The special status plant species Monterey spineflower (*Chorizanthe pungens* var. *pungens*; federally threatened) was present in localized

patches within the opening between shrubs. This vegetation community is located near the eastern terminus of Plumas Street within the Canyon Del Rey/SR 218 segment of the BSA.

Eucalyptus

The BSA contain approximately 0.4 acre of eucalyptus stands, with none occurring within the current Trail corridor. This community is not described by Holland (1986) or Sawyer et al. (2009) but is best described by the *Eucalyptus globulus* Semi-Natural Woodland Stands by Sawyer et al. This community occurs where there are large stands of eucalyptus trees, typically blue gum eucalyptus (*Eucalyptus globulus*). Generally, these have been planted as wind brakes and have become established as monotypic stands. They function much like landscaped vegetation communities; however due their monotypic condition are herein described and mapped as a separate community type. This community was observed sporadically throughout the BSA.

Open Water

The BSA contain approximately 0.9 acre of open water, with none occurring within the current Trail corridor. Fresh open water habitats occur at Roberts Lake and Laguna Grande. Originally a seasonal estuarine body of water, the Laguna Grande and Roberts Lake complex is now a freshwater marsh and two lakes. This community is not described by Holland (1986) or Sawyer et al. (2009) as it does not contain dominant vegetation. It is a portion of the Canyon Del Rey Creek that drains the 13.5 square mile Canyon Del Rey Creek watershed to the southeast. The creek flows through Laguna Grande, then into Roberts Lake, and finally into Monterey Bay. Despite the past disturbance to these lakes, wetlands, and associated communities, these habitats continue to support a variety of vegetation and wildlife. Because of this unusual setting, these coastal zone habitats are biologically and physically significant in that they represent a unique example of coastal zone plant and wildlife communities. Both coastal water bodies are frequent foraging and resting sites for resident and migrating water fowl.

Freshwater Emergent Wetlands

The BSA contain approximately 1.8 acres of freshwater emergent wetland, with approximately 0.1 acre occurring within the current Trail corridor (not including options). This vegetation community most closely resembles the *Schoenoplectus californicus* Herbaceous Alliance described by Sawyer et al. (2009). Freshwater emergent wetlands are generally dominated by hydrophytic perennial monocots. Soils within this vegetation community are typically saturated or inundated for many weeks each year. Freshwater emergent wetlands are only found along the Canyon Del Rey/SR 218 segment; at Laguna Grande and Roberts Lake, and Work Memorial Park adjacent to Canyon Del Rey Creek. At Laguna Grande and Roberts Lake freshwater marshes consist of large emergent herbaceous wetland species, including tule (*Schoenoplectus californicus*) and cattails (*Typha* spp.), which grow in a discontinuous band along the margins of both lakes in shallow waters. Soils are saturated or inundated for many weeks each year. This community also includes patches of other emergent herbaceous wetland vegetation, in which other, smaller emergent species such as rushes (*Juncus* spp.), pennywort (*Hydrocotyle ranunculoides*), spikerush (*Eleocharis macrostachya*), loosestrife (*Lythrum hyssopifolia*), rabbitsfoot grass (*Polypogon monspeliensis*), and brass buttons (*Cotula coronopifolia*) are intermixed in saturated soils at the edges of the lakes and stream. At Work Memorial Park vegetation observed in the emergent wetland was dominated by salt grass (*Distichlis spicata*), with patches of cattails (*Typha* spp.), and pampas grass (*Cortaderia selloana*) and

may better fit the *Typha (angustifolia, domingensis, latifolia)* Herbaceous Alliance described Sawyer et al. (2009).

Ephemeral Pond

The BSA contain ~~less than~~ 0.14 acre of ephemeral pond, with none occurring within the current Trail corridor (not including options). This land cover type is not described by Holland (1986) or Sawyer et al. (2009) as it does not contain dominant vegetation other than duckweed (*Lemna* spp.) or mosquito fern (*Azolla* spp.). The only portion of the BSA with ephemeral pond is Frog Pond in the Canyon Del Rey/SR 218 segment. Frog Pond is ephemeral and spring fed and generally consists of aquatic and submerged habitat for portions of the year. Vegetation along the margins of the open water pond habitat consists primarily of arroyo willow thicket, described separately below.

Developed

The BSA contain approximately ~~123.303~~ 18.37-9 acres of developed lands, with approximately 18.37-9 acres occurring within the current Trail corridor (not including options). This land cover type is not naturally occurring and is not described in either the Holland (1986) or Sawyer et al. (2009) classification systems. This community consists of areas that have been modified such that most or all vegetation has been removed or only small areas of landscape vegetation are present. Parking lots, roads, sidewalks, structures, paved and unpaved pathways are included within this community. In some cases vegetation from adjacent areas may overhang. Playgrounds, picnic areas, gravel areas, roadside pullouts, and areas of urban-related bare soil are included in this land cover type.

Ruderal

The BSA contain approximately 20.3 acres of ruderal lands, with approximately 0.9 acre occurring within the current Trail corridor (not including options). Habitats that have been heavily disturbed or altered such that natural vegetation has largely been removed are mapped as ruderal areas. These sites do not correspond well with either the Holland (1986) or Sawyer et al. (2009) classification systems. Ruderal areas have had visible disturbance of soil or vegetation and are mostly bare and colonized by weeds and disturbance-tolerant natives, such as fiddleneck (*Amsinckia* sp.), wild radish (*Raphanus sativa*), field mustards (*Hirschfeldia* spp., *Brassica* spp.), cheeseweed (*Malva parviflora*), annual grasses and filaree. The ruderal habitat is found in all segments of the BSA and typically occurs along roadsides and the margins of buildings.

Arroyo Willow

The BSA contain approximately 3.54 acres of arroyo willow, with approximately 0.35 acre occurring within the current Trail corridor (not including options). This vegetation community most closely resembles the *Salix lasiolepis* Shrubland Alliance described by Sawyer et al. (2009). It occurs primarily along the margins of Frog Pond and is a dense riparian community dominated by a canopy of mature arroyo willow (*Salix lasiolepis*) trees. The mid-story canopy of this community consists of immature arroyo willow, ocean spray (*Holodiscus discolor*) and dogwood (*Cornus* sp.). The understory is generally quite developed, consisting of dense tangles of California blackberry (*Rubus ursinus*) and poison oak, cinquefoil (*Potentilla anserina*), horsetails (*Equisetum* spp.), and rushes (*Juncus* spp.).

Bare Ground/Disturbed

The BSA contain approximately ~~8.17~~⁷ acres of bare ground/disturbed lands, with approximately 0.6 acre occurring within the current Trail corridor (not including options). This land cover type is not naturally occurring and is not described in either the Holland (1986) or Sawyer et al. (2009) classification systems. This land cover type occurs where no vegetation is present includes bare soil or sand. This land cover type was mapped where bare soils were likely the results of disturbance such as development or construction activities. This land cover type was observed sporadically throughout the BSA.

Burn Succession

The Study area contains ~~5.084~~⁷⁵ acres of Burn succession, with approximately 0.12 acre occurring within the project corridor (not including options). This area was recently burned and dominated by deer weed (*Acmispon glaber*) and annual grasses. This community is limited to the Ryan Ranch Trail segment.

Summary of Vegetation Communities and land Cover Types

Due to the location of development and urbanization focused along the coast, many of the segments along the western side of the BSA contain less natural habitats and vegetation communities. These segments are largely developed, including the CSUMB campus and Cities of Seaside, Del Rey Oaks, and Marina. Conversely, the segments along the eastern side of the BSA contain more natural chaparral habitats and less development. A summary of the total acreage of each vegetation community and land cover type occurring within the Trail corridor for each segment is presented below Table 1. The proposed Trail options are included in Table 2 Acreage of Vegetation Communities and Land Cover Types in The FORTAG Corridor (Including Options).

3.3 General Wildlife

Wildlife observed in the BSA varies based on habitat type and availability. The portion of the alignment that runs along General Jim Moore Boulevard at the southern end of the BSA, consists of coastal dunes and open scrub habitat and provides habitat for species common to these xeric habitats. Avian species observed/detected in these areas of the BSA include California thrasher (*Toxostoma redivivum*), California quail (*Callipepla californica*), California scrub jay (*Aphelocoma californica*), California towhee (*Melospiza crissalis*), American bushtit (*Psaltirparus minimus*), and turkey vulture (*Cathartes aura*). Reptile species observed include western fence lizard (*Sceloporus occidentalis*), Blainville's horned lizard (*Phrynosoma coronatum*), and northern Pacific rattlesnake (*Crotalus oreganus*).

The segment of alignment that extends from the CSUMB campus east along Inter-Garrison Road consists of oak woodland and chaparral habitats. Avian species observed/detected in these areas of the BSA include red-tailed hawk (*Buteo jamaicensis*), white-tailed kite (*Elanus leucurus*), California quail, California scrub jay and turkey vulture. Mammalian species observed include California ground squirrel (*Otospermophilus beecheyi*) and bobcat (*Lynx rufus*).

Open annual grassland located in the northern portion of the BSA near the Marina Municipal Airport provides habitat for species observed including northern harrier (*Circus hudsonius*), red-tailed hawk, California ground squirrel, and western fence lizard.

Ephemeral Pond							<0.01 0.14
*Eucalyptus and Ephemeral Pond do not occur in the Trail corridor.							

Freshwater habitats at Roberts Lake, Laguna Grande, ~~and~~ Canyon Del Rey Creek, and the Frog Pond support aquatic wildlife species including Sierran tree frog (*Pseudacris sierra*). Ponds provide habitat for other tree frogs and garter snakes, although additional species were not observed. Avian species observed in these freshwater habitats include American coot (*Fulica Americana*), Canada goose (*Branta canadensis*), mallard (*Anas platyrhynchos*), hooded merganser (*Lophodytes cucullatus*), and Great blue heron (*Ardea herodias*). These aquatic features ~~along with Frog Pond~~ support riparian areas where avian species including red-tailed hawk, red-shouldered hawk (*Buteo lineatus*), and red-winged blackbird (*Agelaius phoeniceus*) occur. A species of bumble bee (*Bombus* Sp.) was also observed foraging in the arroyo willows at the Frog Pond Wetland Preserve.

The portions of the BSA running through the CSUMB campus and from the Marina Municipal Airport west to the coast present urban and developed habitat. Wildlife observed in these areas is consistent with urban disturbance tolerant species, including American crow (*Corvus brachyrhynchos*), anna's hummingbird (*Calypte anna*), black phoebe (*Sayornis nigricans*), California scrub jay, red-shouldered hawk, and red-tailed hawk. Parks and landscaped trees also provide habitat for native birds such as California towhee, bushtit, California scrub-jay, and chestnut-backed chickadee (*Poecile rufescens*).

This page intentionally left blank.

4 Sensitive Biological Resources

Local, state, and federal agencies regulate special status species and other sensitive biological resources and require an assessment of their presence or potential presence to be conducted on-site prior to the approval of proposed development on a property. This section discusses sensitive biological resources observed on the project site, and evaluates the potential for the project site to support additional sensitive biological resources. Assessments for the potential occurrence of special status species are based upon known ranges, habitat preferences for the species, species occurrence records from the CNDDDB, species occurrence records from other sites in the vicinity of the survey area, previous reports for the project site, and the results of surveys of the project site. The potential for each special status species to occur in the BSA was evaluated according to the following criteria:

- **No Potential.** Habitat on and adjacent to the site is clearly unsuitable for the species requirements (foraging, breeding, cover, substrate, elevation, hydrology, plant community, site history, disturbance regime), and species would have been identifiable on-site if present (e.g., oak trees). Protocol surveys (if conducted) did not detect species.
- **Low Potential.** Few of the habitat components meeting the species requirements are present, and/or the majority of habitat on and adjacent to the site is unsuitable or of very poor quality. The species is not likely to be found on the site. Protocol surveys (if conducted) did not detect species.
- **Moderate Potential.** Some of the habitat components meeting the species requirements are present, and/or only some of the habitat on or adjacent to the site is unsuitable. The species has a moderate probability of being found on the site.
- **High Potential.** All of the habitat components meeting the species requirements are present and/or most of the habitat on or adjacent to the site is highly suitable. The species has a high probability of being found on the site.
- **Present.** Species is observed on the site or has been recorded (e.g., CNDDDB, other reports) on the site recently (within the last five years).

4.1 Special Status Species

4.1.1 Special Status Plant Species

Fifty-six (56) special status plant species known to occur in the region were evaluated for their potential to occur in the BSA (Appendix E). Based on the length of the proposed Trail alignment and size of the BSA, and the types and quality of natural vegetation communities within the BSA, only 12 special status plant species could be excluded based on the lack of species-specific habitat features within the BSA. Six special status species were observed during the reconnaissance survey. A total of 38 special status plant species have potential to occur within the BSA (Table 3). Those plants that are federally and/or state listed as endangered or threatened are discussed in detail in the following sections.

Table 3 Special Status Plant Species with Potential to Occur in the BSA

Common Name	Scientific Name	Status
Low Potential to Occur		
Hutchinson's larkspur	<i>Delphinium hutchinsoniae</i>	CRPR 1B. 2
Umbrella larkspur	<i>Delphinium umbraculorum</i>	CRPR 1B. 3
Pinnacles buckwheat	<i>Eriogonum nortonii</i>	CRPR 1B. 3
Beach layia	<i>Layia carnosa</i>	Federal and state endangered
Tidestrom's lupine	<i>Lupinus tidestromii</i>	Federal and state endangered
Carmel Valley bush-mallow	<i>Malacothamnus palmeri</i> var. <i>involucratus</i>	CRPR 1B. 2
Carmel Valley malacothrix	<i>Malacothrix saxatilis</i> var. <i>arachnoidea</i>	CRPR 1B. 2
Monterey clover	<i>Trifolium trichocalyx</i>	Federal and state endangered
Moderate Potential to Occur		
Vernal pool bent grass	<i>Agrostis lacuna-vernalis</i>	CRPR 1B.1
Jolon clarkia	<i>Clarkia jolonensis</i>	CRPR 1B. 2
San Francisco collinsia	<i>Collinsia multicolor</i>	CRPR 1B. 2
Hospital Canyon larkspur	<i>Delphinium californicum</i> ssp. <i>interius</i>	CRPR 1B. 2
Menzies' wallflower	<i>Erysimum menziesii</i>	Federal and state endangered
Point Reyes horkelia	<i>Horkelia marinensis</i>	CRPR 1B. 2
Contra Costa goldfields	<i>Lasthenia conjugens</i>	CRPR 1B. 1
Oregon meconella	<i>Meconella oregana</i>	CRPR 1B. 1
Marsh microseris	<i>Microseris paludosa</i>	CRPR 1B. 2
Choris' popcornflower	<i>Plagiobothrys chorisianus</i> var. <i>chorisianus</i>	CRPR 1B. 2
Hickman's cinquefoil	<i>Potentilla hickmanii</i>	Federal and state endangered
Angel's hair lichen	<i>Ramalina thrausta</i>	CRPR 2B. 1
Pine rose	<i>Rosa pinetorum</i>	CRPR 1B. 2
Santa Cruz microseris	<i>Stebbinsoseris decipiens</i>	CRPR 1B. 2
Santa Cruz clover	<i>Trifolium buckwestiorum</i>	CRPR 1B. 1
Saline clover	<i>Trifolium hydrophilum</i>	CRPR 1B. 2
Pacific Grove clover	<i>Trifolium polyodon</i>	CRPR 1B. 1
High Potential to Occur		
Hooker's manzanita	<i>Arctostaphylos hookeri</i> ssp. <i>hookeri</i>	CRPR 1B. 2
Toro manzanita	<i>Arctostaphylos montereyensis</i>	CRPR 1B. 2
Pajaro manzanita	<i>Arctostaphylos pajaroensis</i>	CRPR 1B. 1
Pink Johnny-nip	<i>Castilleja ambigua</i> var. <i>insalutata</i>	CRPR 1B. 1
Congdon's tarplant	<i>Centromadia parryi</i> ssp. <i>congdonii</i>	CRPR 1B. 1
Fort Ord spineflower	<i>Chorizanthe minutiflora</i>	CRPR 1B. 2
Robust spineflower	<i>Chorizanthe robusta</i> var. <i>robusta</i>	Federally endangered

Common Name	Scientific Name	Status
Seaside bird's-beak	<i>Cordylanthus rigidus ssp. littoralis</i>	State endangered
Eastwood's goldenbush	<i>Ericameria fasciculata</i>	CRPR 1B. 1
Sand-loving wallflower	<i>Erysimum ammodophilum</i>	CRPR 1B. 2
Kellogg's horkelia	<i>Horkelia cuneata var. sericea</i>	CRPR 1B. 1
Northern curly-leaved monardella	<i>Monardella sinuata ssp. nigrescens</i>	CRPR 1B. 2
Yadon's rein orchid	<i>Piperia yadonii</i>	Federally endangered
Present		
Monterey spineflower	<i>Chorizanthe pungens var. pungens</i>	Federally threatened
Monterey gilia	<i>Gilia tenuiflora ssp. arenaria</i>	Federally endangered and state threatened
Hickman's onion	<i>Allium hickmanii</i>	CRPR 1B.2
Sandmat manzanita	<i>Arctostaphylos pumila</i>	CRPR 1B. 2
Monterey cypress (Landscaped)	<i>Hesperocyparis macrocarpa</i>	CRPR 1B. 2
Monterey pine (Landscaped)	<i>Pinus radiata</i>	CRPR 1B. 1
CRPR (CNPS California Rare Plant Rank)		
1A=Presumed Extinct in California		
1B=Rare, Threatened, or Endangered in California and elsewhere		
2A=Plants presumed extirpated in California, but more common elsewhere		
2B=Plants Rare, Threatened, or Endangered in California, but more common elsewhere		
CRPR Threat Code Extension		
.1=Seriously endangered in California (over 80% of occurrences threatened/high degree and immediacy of threat)		
.2=Fairly endangered in California (20-80% occurrences threatened)		
.3=Not very endangered in California (<20% of occurrences threatened)		

Beach Layia

Beach layia (*Layia carnosa*) is a succulent annual herb belonging to the sunflower family (Asteraceae). As a winter annual, *Layia carnosa* germinates during the rainy season between fall and mid-winter, blooms in spring (April to June), and completes its life cycle before the dry season. Beach layia is restricted to coastal openings in coastal sand dunes ranging in elevation from 0 to over 100 feet, where it colonizes sparsely vegetated, semi-stabilized dunes and blowouts. The species often occurs in narrow bands of moderately disturbed habitat along the edges of Trails and roads.

Suitable sandy soils and coastal sand dunes habitat is present within the BSA. There are two known occurrences, at Point Pinos and Asilomar recorded in the CNDDDB. This species is most likely to occur in the coastal dunes along the National Monument Loop segment on the former Fort Ord or the western terminus of the CSUMB Loop South segment.

Tidestrom's Lupine

Tidestrom's lupine (*Lupinus tidestromii*) is a creeping perennial herb and belongs to the pea family (Fabaceae). Tidestrom's lupine is found in the coastal dune communities of California and thrives in

areas of moderate disturbance and shifting dune dynamics. It occurs in the mild maritime climate of the central California coast on partially stabilized dune communities. It is found in three disjunct areas: throughout the northern portion of the Monterey Peninsula in Monterey County, near Half Moon Bay, and from the northwest portion of Marin County at Point Reyes National Seashore to the Russian River, Sonoma County.

Marginal dune habitat is present within the dune scrub community within BSA. There are five known occurrences within five miles of the BSA distributed among three locations: Pt. Pinos, Asilomar, and Spanish Bay. This species is most likely to occur in the dune scrub along the National Monument Loop segment on the former Fort Ord or the western terminus of the CSUMB Loop South segment.

Monterey Clover

Monterey clover (*Trifolium trichocalyx*) is a many-branched prostrate annual herb of the pea family (Fabaceae). It is a classic fire follower, taking advantage of reduced forest cover that allows a significantly higher proportion of light to reach the herbaceous ground cover for the first few years after a fire. This species is mostly found in closed-cone coniferous forests and in openings and recently burned areas or along roadsides. Monterey clover tends to occur in sandy soils and blooms from April through June.

Suitable coniferous forest habitat is present but limited within the BSA. Additionally, the burn success community in the southern extent of the Ryan Ranch segment of the BRA could provide suitable habitat. There are eight known occurrences within five miles of the BSA, all of which occur in the Del Monte Forest.

Menzies' Wallflower

Menzies' wallflower (*Erysimum menziesii*) is a member of the mustard family (Brassicaceae). Its life history is that of a semelparous (monocarpic) perennial, meaning that it flowers and produces fruit only once during its lifespan, after which it dies. Blooming typically occurs from March through April, although it may begin as early as late February. Menzies' wallflower occurs in the dune mat community, on the flanks or crests of dunes, in open sandy areas, on sparsely vegetated dunes, and in the borders of lupine scrub (Botanica Northwest Associates 1992 as cited in USFWS 2008).

Limited coastal dune or coastal strand habitat is present in some areas of the BSA. There are eight known occurrences within five miles of the BSA. This species is most likely to occur in dune scrub habitat along the National Monument Loop segment or near the coast on the CSUMB North Loop and CSUMB South Loop segments.

Hickman's Cinquefoil

Hickman's cinquefoil (*Potentilla hickmanii*) is a small, long-lived, herbaceous perennial in the rose family (Rosaceae). The species is currently known from two native populations. On a broad scale, habitat for Hickman's cinquefoil has been described as coastal terrace prairie (Holland 1986, Stromberg et al. 2001) and valley grassland (Holland and Keil 1990). On a finer scale, these grasslands would be described as belonging to various vegetation series including the California oatgrass series (Sawyer and Keeler-Wolf 2009). In Monterey County, Hickman's cinquefoil is found within a degraded meadow in an opening within a Monterey pine forest.

Marginal Monterey pine forest habitat is present but limited within the BSA; however, Monterey pine habitat typically occurs within a landscape vegetation community context, and suitable

meadow habitat within such is limited to absent. There are two known occurrences within five miles, both of which occur in Pacific Grove. This species has a low potential for occurrence, but is most likely to occur along the National Monument Loop, CSUMB Loop South, CSUMB North, and Northern Loop Trail segments where landscaped Monterey pine forest and mixed oak and Monterey pine woodland is present.

Robust Spineflower

Robust spineflower (*Chorizanthe robusta* var. *robusta*) is a prostrate winter-spring annual herb in the buckwheat family (Polygonaceae). It is found in open sandy areas away from dense competitive plants in active dunes and stabilized ancient dune areas, primarily north of the former Fort Ord in Santa Cruz County. This species grows in sandy soils associated with active coastal dunes and inland sites with sandy soils. Plant communities that support this species include coastal dune, coastal scrub, grassland maritime chaparral, and oak woodland communities. Robust spineflower tends to be located in the openings between dominant elements in these communities (e.g., scrub, shrub, oak trees, clumps of herbaceous vegetation).

No occurrences have been reported to the CNDDDB within five miles of the BSA; however, several individuals were observed in dune habitat on the former Fort Ord and this species was included in the HMP and BO but has not been seen since and may have been misidentified (USACE 2018). This species is most likely to occur within dune scrub habitat along the National Monument Loop and Northern Loop segments on the former Fort Ord.

Seaside Bird's-Beak

Seaside bird's beak (*Cordylanthus rigidus* ssp. *littoralis*) is a bushy annual herb in the figwort family (Scrophulariaceae). It flowers in the summer and insect pollinated to produce small seeds that are dropped or shaken by wind from their capsule. This species grows in sandy soils of stabilized dunes covered by closed-cone pine forest, cismontane woodland, maritime chaparral, coastal scrub, and grasslands. Seaside bird's-beak thrives in areas of recent surface soil disturbance or in areas with reduced levels of competition from shrubs and herbaceous plants.

Suitable habitat is present throughout the BSA in the sandy soils of the coastal scrub and dunes. According to the CNDDDB, there are 13 known or historic occurrences within five miles of the BSA. This species is most likely to occur along the National Monument Loop and Northern Marina segments.

Yadon's Rein Orchid

Yadon's rein orchid (*Piperia yadonii*) is a slender perennial herb in the orchid family (Orchidaceae), that grows from an underground caudex/corm from the early spring through summer and recedes into dormancy during the late summer through winter. Plants may produce only vegetative growth for several years before first producing flowers (Rasmussen 1995). The blooming season is fairly short, with the first flowers opening mid- to late-June and blooming generally completed by early August. Recent data suggest that only a small percentage (typically 2 to 5 percent) of individuals in a population may flower in any year (Allen 1996).

The species is endemic to Monterey County and has been found in two primary habitat types, Monterey pine forest and chaparral, but is also found in coastal scrub and in grasslands mixed with planted Monterey pines. In Monterey pine forest habitat, the species appears to favor a predominantly herbaceous understory typically under the perimeter canopy of evergreen

huckleberry (*Vaccinium ovatum*) and woollyleaf manzanita. In chaparral, the species is typically found on rocky outcroppings, in sandy areas or eroded ridgetops where the soil is shallow, growing beneath dwarfed Hooker's manzanita shrubs (Morgan and Ackerman 1990; Allen 1996). Overall, this species favors a well-drained sandy soil substrate that retains moisture during the rainy season but is not subject to inundation.

Critical habitat for this species was designated on October 24, 2007 and includes areas throughout the BSA. Suitable habitat is present in the Monterey pine forest and chaparral located throughout the BSA. There are 11 known occurrences within five miles of the BSA and this species is known to occur on the former Fort Ord. Two species of piperia were detected within the BSA during the reconnaissance surveys: Mountain piperia (*Pieria transversa*) and Mike's rein orchid (*Piperia michaelii*). Yadon's rein orchid is most likely to occur along the National Monument Loop and Northern Loop segments that run through the former Fort Ord.

Monterey Spineflower

Monterey spineflower (*Chorizanthe pungens* var. *pungens*) is a prostrate annual species in the buckwheat family (Polygonaceae). Seeds typically germinate after the onset of winter rains and plants can be found above ground as early as December (Fox et al. 2006). Flowering occurs from late March to June, depending on weather patterns, and seed is dispersed in mid-summer. The species colonizes open sandy sites and tends to invade roadsides and firebreaks. It is found in maritime chaparral, coast live oak woodland, coastal scrub, grassland, and coastal dune habitats. Monterey spineflower occurs along the coast of southern Santa Cruz and Monterey counties and inland to the coastal plain of the Salinas Valley.

Critical habitat was designated for this species on May 29, 2002 and revised on January 9, 2008 and includes area on the former Fort Ord within the BSA. There are known occurrences of Monterey spineflower that cover most of the former Fort Ord, the Marina Airport, and dunes west of SR 1. These occurrences extend across the Trail alignments for most of the reach within the former Fort Ord. This species was observed in many locations during the reconnaissance surveys, primarily in open and disturbed habitats.

Monterey Gilia

Monterey gilia (*Gilia tenuiflora* ssp. *arenaria*) is a small, erect annual plant in the phlox family (Polemoniaceae), endemic to the Monterey Bay area of Monterey County, California. Monterey gilia typically germinates from December to February. It can self-pollinate as well as outcross, and fruit is set from the end of April to the end of May. The plant occurs along Trails and roadsides, on the cut banks of sandy ephemeral drainages, in recently burned chaparral, and in other disturbed patches. It appears to do well on sites that have undergone recent substrate disturbance. Most populations are small and localized.

Monterey gilia is generally found in the fog belt area but extends to inland areas as well. Along the coast Monterey gilia is found on rear dunes, near the dune summit in level areas, and on depressions or slopes in wind-sheltered openings in low-growing dune scrub vegetation. It does not occur in areas exposed to strong winds and salt spray. On ancient dune soils, which extend inland, it occurs in openings among maritime chaparral, coastal sage scrub, oak woodlands, grasslands, and where other vegetative cover is low.

This species is known from 28 occurrences within five miles of the BSA and one large population (over 1,700 individuals) is mapped within the Trail alignment just north of Watkins Gate Road. This species was observed within the CSUMB Loop North segment during reconnaissance surveys.

4.1.2 Special Status Animal Species

Thirty-seven (37) special status animal species known to occur in the region were evaluated for their potential to occur on the project site (Appendix E). Based on the length of the proposed Trail alignment and size of the BSA, and the types and quality of natural vegetation communities within the BSA, only 16 special status animal species could be excluded based on the lack of species-specific habitat features present within the BSA. These species generally occur in marine habitats or the BSA is outside of the species known range. Twenty (20) special status animal species have some potential to occur in the BSA (Table 4). These species are discussed in further detail in the following sections.

Table 4 Federal and State Listed Animals with Potential to Occur in the Plan Area

Common Name	Scientific Name	Status
Low Potential to Occur		
Pallid bat	<i>Antrozous pallidus</i>	SSC
Townsend's big-eared bat	<i>Corynorhinus townsendii</i>	SSC
Moderate Potential to Occur		
Smith's blue butterfly	<i>Euphilotes enoptes smithi</i>	FE
California red-legged frog	<i>Rana draytonii</i>	FT
Coast Range newt	<i>Taricha torosa</i>	SSC
Tricolored blackbird	<i>Agelaius tricolor</i>	ST
Golden eagle	<i>Aquila chrysaetos</i>	FP, WL
High Potential to Occur		
Northern California legless lizard	<i>Anniella pulchra</i>	SSC
Western pond turtle	<i>Emys marmorata</i>	SSC
Two-striped gartersnake	<i>Thamnophis hammondi</i>	SSC
California tiger salamander	<i>Ambystoma californiense</i>	FT/ST
Cooper's hawk	<i>Accipiter cooperii</i>	WL
Burrowing owl	<i>Athene cunicularia</i>	SSC
Ferruginous hawk	<i>Buteo regalis</i>	WL
White-tailed kite	<i>Elanus leucurus</i>	FP
California horned lark	<i>Eremophila alpestris actia</i>	WL
American badger	<i>Taxidea taxus</i>	SSC
Monterey dusky-footed woodrat	<i>Neotoma fuscipes luciana</i>	SSC
Present		
Coast horned lizard	<i>Phrynosoma blainvillii</i>	SSC
Northern harrier (foraging)	<i>Circus cyaneus</i>	SSC
SSC = CDFW Species of Special Concern	FP = State Fully Protected	WL = State Watch List
FT = Federal Threatened	FE = Federal Endangered	ST = State Threatened

Smith's Blue Butterfly

Smith's blue butterfly (*Euphilotes enoptes smithi*) occur in scattered populations in association with coastal dune, coastal scrub, chaparral, and grassland habitats (Scott 1986). They spend their entire lives in association with two host buckwheat plants: cliff buckwheat (*Erigonum parviflorum*) and seaside buckwheat (*E. latifolium*). Both buckwheat host plants are utilized as larval and adult food plants.

There are six known occurrences of this species within five miles of the BSA. Four of these occurrences are recorded along the beaches and dunes west of the BSA. The coastal dunes and coastal scrub habitats in the former Fort Ord provide suitable sandy soils and vegetation. The majority of suitable habitat for this species is present along the National Monument Loop, Northern Loop, and Northern Marina segments, and the potential for this species to occur is limited to those areas of the BSA where suitable habitat including seaside buckwheat and cliff buckwheat occur.

California Tiger Salamander

California tiger salamander (CTS) is a federally and state threatened species found primarily in grasslands and low foothill and oak woodland habitats located within approximately 2,200 feet (671 meters [m]) of breeding pools (Trenham and Shaffer 2005). CTS breed in long-lasting rain pools (e.g., seasonal ponds, vernal pools, slow-moving streams) that are often turbid, and occasionally in permanent ponds lacking fish predators. Adults spend 90 percent of their lives underground. Potential and known breeding habitat includes wetland and open water habitats. During the non-breeding season, adults occur in upland habitats and occupy small mammal burrows (ground squirrel, pocket gopher, etc.) and other subterranean cover (e.g., cracks, root hollows, etc.). They migrate nocturnally to aquatic sites to breed during relatively warm winter or spring rains. Juveniles emigrate at night from the drying pools to upland refuge sites, such as rodent burrows and cracks in the soil.

There are 29 known occurrences of this species within five miles of the BSA. Most of these occur west of the National Monument Loop and Northern Loop segments. The nearest CNDDDB record for this species overlaps the BSA at the intersection of Inter-Garrison Road and Reservation Road, where breeding was observed at detention basin. Suitable marginal breeding habitat is present within the BSA where detention basins are located, however the basins are generally surrounded by development which would be a significant barrier for movement. During aquatic sampling at the Armstrong Ranch agricultural basin CTS larva and eggs were observed in 2007 (Marina 2008). The Armstrong ranch Ag basin is located just west of the Northern Marina segment. At the request of USFWS genetic testing was performed and the CTS were determined to be 99% non-native. USFWS concurred that the CTS in the basin and surrounding uplands were not protected under the Endangered Species Act (Marina 2008). Most of the BSA does not provide suitable breeding habitat; however, the species could occur in suitable upland habitat within 1.3 miles of potential CTS breeding habitat. Potential breeding habitat within 1.3 miles of the BSA is generally limited to a handful of detention basins within Seaside, and known or potential breeding ponds, mostly located on FORA lands to the east (Appendix A, Figure 6). Upland grassland habitat within 1.3 miles of these sites has potential to support CTS, and the species is most likely to occur in these habitats along the National Monument Loop and Northern Loop segments where they are within dispersal distance from known or potential breeding sites.

California Red-legged Frog

California red-legged frog (CRLF) is a federally threatened species that occurs in lowlands and foothills in or near permanent sources of deep water with dense, shrubby or emergent riparian vegetation. It typically inhabits quiet pools of streams, marshes, and ponds. All life history stages are most likely to be encountered in and around breeding sites, which include coastal lagoons, marshes, springs, permanent and semi-permanent natural ponds, and ponded and backwater portions of streams, as well as artificial impoundments such as stock ponds, irrigation ponds, and siltation ponds. Eggs are typically deposited in permanent pools, attached to emergent vegetation. This species typically requires 11 to 20 weeks of permanent water for larval development and must have access to estivation habitat. Suitable upland habitat must provide sufficient moisture to prevent desiccation and sufficient cover to provide protection from predators. Typical upland habitat consists of downed woody vegetation, leaf litter, and small mammal burrows, densely vegetated areas, and even, man-made structures (i.e., culverts, livestock troughs, spring-boxes, abandoned sheds) (USFWS 2002a).

There are 29 known occurrences of this species within five miles. Most of these occur along the Carmel River, which is more than three miles south of the BSA, at a distance too far to disperse into the BSA. One occurrence was reported from the Salinas River, north of the Northern Marina segment. Suitable habitat is present at Roberts Lake, Laguna Grande and the Frog Pond Wetland Preserve where ponded water and emergent aquatic vegetation are perennially present. Suitable upland habitat is present immediately adjacent to the Roberts Lake, Laguna Grande, and the Frog Pond in willow riparian habitat.

Upland habitat within the remainder of the BSA is generally marginal or unsuitable for long term usage: ephemeral or intermittent drainages are dry for most of the year, and surrounding lands, including those near potential CTS breeding sites (Appendix A, Figure 6), are too xeric to provide suitable upland habitat. Urban development in the western part of the BSA inhibits the dispersal of CRLF from one site to another.

Coast Range Newt

Coast range newt is a CDFW species of special concern that inhabits terrestrial habitats such as oak woodlands, annual grassland, and chaparral where sufficient moisture is present. As adults they will migrate over 0.62 mile (1 km) to breed in ponds, reservoirs and slow-moving streams. There are currently no CNDDDB records for the coast range newt within five miles of the BSA. However, the BSA is within the known range of the species and suitable terrestrial and ponded habitats are present within the Roberts Lake, Laguna Grande and the Frog Pond areas of the BSA.

Western Pond Turtle

Western pond turtle is a CDFW species of special concern that is found in ponds, lakes, rivers, creeks, marshes, and irrigation ditches, with abundant vegetation. It requires basking sites of logs, rocks, cattail mats, or exposed banks. Western pond turtle is active from approximately February to November. It will estivate during summer droughts by burying itself in soft bottom mud. When creeks and ponds dry up in summer, some turtles will travel along the creek until they find an isolated deep pool, others stay within moist mats of algae in shallow pools, and many turtles move to woodlands above the creek or pond and bury themselves in loose soil. Pond turtle will overwinter underground until temperatures warm up and the heavy winter flows of the creek subside. They return to the creek in the spring.

Suitable habitat for this species is present at Laguna Grande and the Frog Pond, and Canyon Del Rey Creek may provide a corridor for movement between the two. This species is also known to occur on the former Fort Ord and other ponds within five miles of the BSA. This species is most likely to occur along the Canyon Del Rey/SR 218 segment.

Northern California Legless Lizard

The northern California legless lizard is CDFW species of special concern that is typically found in coastal dune, valley-foothill chaparral, and coastal scrub vegetation communities, and areas with sandy or loose organic soils or high amounts of leaf litter. The species prefers moist warm loose soil with plant cover, and moisture is an essential component of their habitat requirements (California Herps 2019). Occurs in sparsely vegetated areas of beach dunes, chaparral, pine-oak woodlands.

California legless lizards have been documented within five miles of the BSA. Most of the 39 occurrences recorded are along the beaches west of the BSA. Suitable soils and shrubby habitat are present in open coast scrub and dunes at the former Fort Ord; however, these areas may lack sufficient moisture for the species.

Coast Horned Lizard

Coast horned lizard is a CDFW species of special concern that is found in grasslands, coniferous forests, woodlands, and chaparral, in open areas of sandy or loose soil. Horned lizards are active above-ground between April and October, with most activity concentrated between April and June. During the remainder of the year they aestivate underground in mammal burrows or rock crevices or beneath objects such as boulders and logs. Horned lizard diets are specialized and almost exclusively consist of native ants (>94 percent by prey item [Suarez et al. 2000]). There are currently no CNDDDB records for the coast horned lizard within five miles of the BSA. However, the BSA is within the known range of the species and suitable grassland and woodland habitats and sandy soils are present within the BSA. The species was observed in the National Monument Loop segment during the reconnaissance survey. The species has potential to occur anywhere in the BSA with suitable sandy open areas but is unlikely to occur in the more developed segments where dispersal barriers (roads, commercial and residential development, etc.) reduce the ability for the species to access isolated patches of suitable habitat.

Two-striped Garter Snake

The two-striped garter snake is a CDFW species of special concern that occurs from Monterey County south along the coast, mostly west of the South Coast Ranges, into San Diego County west of the Peninsular Ranges. It is primarily an aquatic species that occurs near ponds, pools, creeks, cattle tanks, and other sources of water within oak woodland, chaparral, scrub communities, and coniferous forest habitats. It is often found in rocky areas also. Depending upon weather conditions, two-striped garter snake can be active during January through November and typically breeds March through April.

Suitable habitat is present in the BSA at Laguna Grande and the Frog Pond, and there are five known occurrences within five miles of the BSA. The nearest CNDDDB record occurs just west of the Northern Marina Trail segment. The BSA is within the known range of the species and aquatic and woodland habitats are present within the BSA. Due to the presence of standing fresh water at Laguna Grand and the Frog Pond, two-striped garter snake has a high potential to occur within the BSA.

Cooper's Hawk

Cooper's hawk is a state watch list species. A small raptor that breeds in oak woodlands and deciduous riparian areas, its nests are often constructed near water, and the species forages in a variety of woodland and edge habitats. An agile flier, the species is known to pursue small birds and mammals through thickets and woodlands, and generally occurs in wooded areas. During the winter months, the Cooper's hawks utilize a wider variety of habitats for foraging including open fields and grasslands.

This species was observed during surveys of the Del Rey Oaks Trail segment. CNDDDB contained no records for this species; however, this species is not often reported to CNDDDB, and the species is known to occur in the region, with an abundance of observations on eBird. Suitable nesting habitat in the BSA consists of oak woodland canopy and riparian areas. The BSA contains suitable foraging habitat, including all woodland and annual grassland areas.

Golden Eagle

Golden eagle is a CDFW fully protected species that inhabits semi-open habitats where there is easy access to their primary prey of small to medium-sized mammals. Grasslands, deserts, savannahs, and early successional stages of forest and shrub habitats provide necessary foraging habitats. Nests are placed on cliffs or large trees and are maintained from year to year. Breeding occurs from January through August, and breeding territories range from eight to 21 square miles, or three to five miles surrounding the nest, but activity is often concentrated in a smaller core area. Although only one nest is used each year, a territory may contain multiple alternate nests.

There are no occurrence records on the CNDDDB within five miles of the BSA. The species is known to occur in the region, and there are numerous eBird reports documented within five miles of the BSA. Marginally suitable nest trees occur within 0.25-mile of the Trail alignment, but the BSA and immediate vicinity do not provide suitable nesting habitat for this species. This species is most likely to forage along the Northern Loop and Northern Marina segments in the open grassland and forested areas near the Trails.

Burrowing Owl

Burrowing owl is a CDFW Species of Special Concern that occupies open, treeless areas within grassland, low density scrub, and desert biomes. This species generally inhabits gently-sloping areas, characterized by low, sparse vegetation, and is often associated with high densities of burrowing mammals (Poulin et al. 2011). Burrowing owl often uses relatively disturbed areas such as agricultural fields, golf courses, cemeteries, and vacant urban lots in addition to natural breeding habitats. Nests are most often in fossorial animal burrows, such as California ground squirrel or American badger, but atypical nests such as culverts or rubble piles may also be used. Nest sites are typically selected in an area with a high density of burrows.

There are five known occurrences within five miles of the BSA, and the species is known to occur in the region. The nearest CNDDDB records for this species include two occurrences that overlap the BSA in the Northern Marina and CSUMB Loop North segments. Suitable habitat is present in annual grassland, low density scrub, and open spaces throughout the BSA.

Ferruginous Hawk

The ferruginous hawk is a CDFW watch list species. A large raptor that inhabits open habitats during the breeding season and arid to semi-arid areas of California in the winter. They prefer open

grasslands for foraging and have also been observed utilizing agricultural areas. The primary prey of ferruginous hawks are mammals, including rabbits, ground squirrels, and prairie dogs, although birds and reptiles are also eaten (Bechard and Schmutz 1995). Ferruginous hawks often perch on the ground, using sit and-wait tactics to capture prey. They arrive in California between September and October and depart between February and April. They typically congregate in grasslands and deserts where mammalian prey is abundant.

The nearest CNDDDB record for this species overlaps the Northern Marina Trail segment. There are a number of regional observations documented in eBird; however, the species is not regularly observed within Seaside or the western portion of the former Fort Ord. The majority of observations on eBird are from north of the BSA at the western end of the Salinas Valley. Suitable foraging habitat is present in annual grassland, low scrub/woodlands, and open spaces.

Northern Harrier

The northern harrier is CDFW species of special concern. A ground-nesting raptor that feeds voles and other small mammals, waterfowl, other small birds, small reptiles, crustaceans and insects. They breed typically from April to September, with peak activity in June and July. Various sources differ on the breeding and non-breeding ranges of northern harriers; however, breeding in California is well documented (Larsen 1987). The BSA is not within the reported breeding range for this species (Shuford and Gardali 2008), but a breeding pair was observed adjacent to the Northern Loop and Northern Marina segments in 2016 during surveys for the Marina Municipal Airport Master Plan Initial Study Mitigated Negative Declaration (ISMND) (Marina 2018). The potential for breeding within the BSA cannot be excluded. Breeding is typical in large, undisturbed tracts of wetlands and grasslands with low, thick vegetation. Foraging and breeding habitat is essentially identical and includes a variety of open habitats that provide an abundance of suitable prey and lookout perches such as shrubs or fence posts. In California this includes freshwater marshes, brackish and saltwater marshes, wet meadows, weedy borders of lakes, rivers and streams, annual and perennial grasslands (Shuford and Gardali 2008). Western populations tend to breed in dry upland habitats. During winter they use a range of habitats with low vegetation, including deserts, coastal sand dunes, pasturelands, croplands, dry plains, grasslands, old fields, estuaries, open floodplains, and marshes. round and usually in a dense clump of vegetation such as willows, grasses, sedges, reeds, bulrushes, and cattails.

Most of the BSA consists of scrub and woodland habitat too dense for typical northern harrier foraging. Developed areas are also unlikely to support this species. Suitable habitat is present in the agricultural fields and larger areas of annual grasslands within, especially along the Northern Marina segment. This species was observed foraging over fields north of the Marina Airport during the reconnaissance survey.

White-Tailed Kite

White-tailed kite is a CDFW fully protected species. A yearlong resident in coastal and valley lowlands, the species inhabits a wide range of habitats, mostly in cismontane California. The species prefers trees with dense canopies for cover. Their diet consists mostly of voles and other small, diurnal mammals, but the species occasionally feeds on birds, insects, reptiles, and amphibians. Typical foraging habitat is undisturbed, open grasslands, meadows, farmlands and emergent wetlands. Nesting is typically near top of dense oak, willow, or other tree stands, located near foraging areas. Preferentially selects herbaceous lowlands with a range of woodland structure, and

high density of voles (Zeiner et al. 1990), and substantial groves of dense, broad-leafed deciduous trees for nesting and roosting (Zeiner et al. 1990).

The CNDDDB contains no occurrence records for white-tailed kite within five miles of the BSA; however, eBird has an abundance of reports documented throughout the Monterey Bay region. The species is generally common along the coast and wooded inland areas; however, there are few records of the species in Seaside or on FORA lands. The species was observed foraging north of the Northern Loop and Northern Marina Trail segments (outside of the BSA) during the reconnaissance survey. The grassland and agricultural areas within the BSA provide foraging habitat, and suitable nesting habitat is present in areas of dense woodland and riparian areas of the BSA.

California Horned Lark

California horned lark is CDFW watch list species. A ground-dwelling bird common in open, sparsely vegetated areas such as grasslands, deserts, and agricultural areas. They congregate in moderately sized flocks, feeding mostly on insects and other small invertebrates. The species is a ground-nester, building a small grass-lined cup in slight depressions in the open. They are year-round residents in much of California, breeding in open areas throughout their range (Zeiner et al 1990).

Two CNDDDB records for this species overlap the BSA in the Northern Marina and Northern Loop segments. Records from eBird are predominantly from north and east of the BSA. Annual grassland, low scrub/woodlands, and open spaces throughout the BSA provide suitable breeding and foraging habitat for the species.

Tri-Colored Blackbird

Tri-colored blackbird is a state endangered species. A colonial species that is largely endemic to, and a year-round resident in California. It requires open water, protected nesting substrate, and foraging areas with insect prey within a few kilometers of the colony. The species preferentially selects breeding sites that include open accessible water with protected areas for nesting. Site generally need to support flooded nesting vegetation and suitable foraging sites within a few kilometers (Shuford and Gardali 2008).

There are nine documented occurrences recorded in the CNDDDB within five miles of the BSA. There are a number of observations of the species on eBird, generally restricted to south and west of the BSA. A single report of the species from Laguna Grande in December 2018 has accompanying notes about a small flock (roughly 20 individuals) known to frequent the area around Roberts Lake, Laguna Grande and El Estero. Marginal nesting habitat is present within the emergent wetland vegetation occurring along the margins of Roberts Lake, ~~and Laguna Grande, and the Frog Pond.~~ Foraging habitat for tricolored blackbird is present at open sites near potential nesting habitat. This species has low potential to occur in nest colonies, and a moderate potential to occur foraging in the BSA throughout the year.

Pallid Bat

Pallid bats are a CDFW species of special concern. They are known to inhabit deserts, grasslands, shrublands, woodlands and forests. Most commonly occur in open, dry habitats with rocky areas for roosting (caves, mines, etc.). Day roosts are in caves, crevices, mines, and occasionally in hollow trees and buildings. Day roosts need deep cover to protect bats from high temperatures. Maternity colonies are established by early April and can vary in size from dozen to over 100 individuals (Zeiner et al. 1990).

There are no CNDDDB records for this species within five miles of the BSA, but the species is known to occur throughout all of California's lower elevations. Suitable grassland and scrubland habitats are present throughout the BSA. Old buildings and hollow trees throughout the BSA provide suitable roosting habitat, and much of the BSA provides suitable foraging habitat.

Townsend's Big-Eared Bat

Townsend's big-eared bat is a CDFW species of special concern found throughout California in a wide variety of habitats, most commonly in mesic sites. This species is found in all but subalpine and alpine habitats, and may be found at any season throughout its range (Zeiner et al. 1990). Day and night roosts for these species can include open buildings with deep cover to protect bats from high temperatures. There are no CNDDDB records for this species within five miles of the BSA. Marginally suitable roost habitat, and suitable foraging habitat is present throughout the BSA.

Monterey Dusky-Footed Woodrat

Monterey dusky-footed woodrat is a subspecies of the dusky-footed wood rat (*Neotoma fuscipes*) and a CDFW species of special concern. The Monterey dusky-footed woodrat occurs throughout Monterey and northern San Luis Obispo counties where appropriate habitat is available. Dusky-footed woodrats can be found in chaparral, streamside thickets, and deciduous or mixed woodland habitats (Burt and Grossenheider 1980). In forest habitats, they are generally found where there is moderate canopy with a dense to moderate understory. Dusky-footed woodrats construct nests (middens) out of sticks, grass, leaves, and other debris and the availability of these nest building items may limit the abundance of woodrats (Zeiner et al. 1990).

Signs of this species and middens were observed along the National Monument Loop Trail segment, and the species commonly occurs in the region. Suitable habitat is present throughout the BSA in all woodland and dense scrub habitats. These habitats are most abundant along the National Monument Loop segment and in forested and woodland areas along the Northern Loop segment.

American Badger

American badger is a CDFW species of special concern that is found in dry, open habitats including grassland and open woodland. It is a highly specialized, semi-fossorial mustelid (Quinn 2008). Suitable burrowing habitat requires dry, sandy soil. The species is most abundant in drier open stages of most shrub, forest, and herbaceous habitats with suitable soils to support burrows (Zeiner et al. 1990). Breeding occurs in summer and early fall, with young being born from March to April.

There are no occurrences recorded on the CNDDDB within five miles of the BSA, however this species is known to occur on the former Fort Ord (Quinn 2008) and evidence of potential badger excavations was observed during the reconnaissance survey. The sandy soils in the coastal dunes and scrub most of the natural vegetation communities within the BSA provides suitable habitat for this species.

4.1.3 Other Protected Species

Nesting Birds

Non-game migratory birds protected under the California Fish and Game Code (CFG) Section 3503 have the potential to breed throughout all of the BSA. Native avian species common to oak woodland, riparian and coastal scrub, grasslands, landscaping, developed and ruderal areas have the

potential to breed and forage throughout the BSA. Species of birds common to the area that typically occur in the region, such as red-tailed hawk, California quail, California scrub jay, mallard, black phoebe (*Sayornis nigricans*), Anna's hummingbird (*Calypte anna*), house finch (*Haemorrhous mexicanus*), American crow (*Corvus brachyrhynchos*), Brewer's blackbird (*Euphagus cyanocephalus*), American bushtit and turkey vulture, were detected during the reconnaissance survey and other project-related site visits. Nesting by a variety of common birds protected by CFGC Section 3503 could occur in virtually any location throughout the BSA.

4.2 Sensitive Plant Communities and Critical Habitats

4.2.1 Sensitive Natural Communities

Plant communities are considered sensitive biological resources if they have limited distributions, have high wildlife value, include sensitive species, or are particularly susceptible to disturbance. CDFW ranks sensitive communities as "threatened" or "very threatened" and keeps records of their occurrences in CNDDDB. Sensitive natural communities included in the CNDDDB follow the original methodology according to "Preliminary Descriptions of the Terrestrial Natural Communities of California" (Holland 1986). The methodology for determining sensitivity continues to be revised and is now based on "the Manual of California Vegetation" (Sawyer et al. 2009). Communities considered sensitive by CDFW are published in the California Sensitive Natural Communities List (CDFW 2018). Vegetation alliances are ranked 1 through 5 based on NatureServe's (2010) methodology, with those alliances ranked globally (G) or statewide (S) as 1 through 3 considered sensitive. Some alliances with the rank of 4 and 5 have also been included in the 2018 sensitive natural communities list under CDFW's revised ranking methodology (CDFW 2018c).

Ten sensitive natural communities are known to occur within the 12-quad search area (Table 5), three of which were observed in the BSA; central dune scrub, central maritime chaparral, and coastal and valley freshwater marsh. These classifications use the old methodology, two additional natural vegetation communities found in the BSA are considered sensitive (ranked 3 or below) under CDFW's revised ranking methodology, including a variety of vegetation alliances for each of the following communities: Sandmat manzanita chaparral and Brittleleaf – woolly leaf manzanita chaparral.

Table 5 Sensitive Natural Communities Known to Occur or with Potential to Occur within the Vicinity of the Plan Area

Sensitive Natural Communities	Status	Present or Absent
Brittleleaf – woolly leaf manzanita chaparral	G3/S3	Present
Central Dune Scrub	G2/S2.2	Present
Central Maritime Chaparral	G2/S2.2	Present
Coastal and Valley Freshwater Marsh	G3/S2.1	Present
Coastal Brackish Marsh	G2/S2.1	Absent
Monterey Cypress Forest	G1/S1.2	Absent
Monterey Pine Forest	G1/S1.1	Absent
Monterey Pygmy Cypress Forest	G1/S1.1	Absent
Northern Bishop Pine Forest	G2/S2.2	Absent
Sandmat manzanita chaparral	G1/S1	Present
Northern Coastal Salt Marsh	G3/S3.2	Absent
Valley Needlegrass Grassland	G3/S3.1	Absent

G-Rank/S-Rank = Global Rank and State Rank as per NatureServe and CDFW's CNDDDB RareFind 5.

Sources: CNDDDB (CDFW 2019a)

Because of transitioning vegetation community nomenclature, some of the communities Rincon has described are equivalent to the sensitive communities listed above. The brittleleaf – woolly leaf manzanita chaparral and the sandmat mazanitas chaparral both fall under the broader category of central maritime chaparral, and all are considered sensitive natural communities. Our mapped dune scrub is equivalent to central dune scrub and is considered a sensitive community. Our mapped freshwater emergent wetland is equivalent to Coastal and Valley Freshwater Marsh and is considered a sensitive community.

4.2.2 Critical Habitats

Six federally designated critical habitats occur within five miles of the BSA:

- Tidewater goby (*Eucyclogobius newberryi*)
- steelhead - south-central California coast DPS (*Oncorhynchus mykiss irideus*, pop. 9)
- Western snowy plover
- Monterey spineflower
- California red-legged frog
- Yadon's rein orchid

Critical habitat for only a single species overlaps the BSA (Appendix A, Figure 6): Federally designated critical habitat for Monterey spineflower occurs on the former Fort Ord, in areas designated for preservation under the HMP. Critical habitat unit 8 encompasses 9,432 acres, containing grasslands, maritime chaparral, coastal scrub, and oak woodlands. This critical habitat unit was designated due to the large population of Monterey spineflower and extent of dry interior maritime chaparral, to allow for population expansion. The National Monument Loop segment borders the edge of this unit west of an existing access road. The Northern Loop and Northern

Marina segments cross the northern end of unit 8. The Northern Loop segment crosses between the Jerry Smith Access Corridor south of Inter-Garrison Road to south of the intersection with Reservation Road. The Northern Marina segment crosses north east of the intersection of Quebrada Del Mar Road and Tallmon Street, along an existing access road.

4.3 Jurisdictional Waters and Wetlands

Potentially Jurisdictional areas in the BSA are generally limited to the Canyon Del Rey/218 segment, which includes Laguna Grande, Canyon Del Rey Creek, and the Frog Pond; however, isolated potential jurisdictional features such as detention basins are present at various locations within BSA (Appendix A, 5).

Aquatic resources present in the BSA at Laguna Grande include freshwater emergent wetlands, riparian woodlands, riverine, and lake areas. Originally a seasonal estuarine body of water, the Laguna Grande and Roberts Lake complex is now a freshwater marsh and two lakes. Canyon Del Rey Creek flows approximately 1,300 feet through Laguna Grande Park before entering the lake. A section of Canyon Del Rey Creek flows underground through culverts just south west of the park, under Fremont Boulevard and a shopping center. South east of the shopping center Canyon Del Rey Creek is a channelized stream which flows through Work Memorial Park. Adjacent to the stream within the park is a wetland area, likely fed by culverts under SR 218 which appear to flow year-round and may be fed by a seep/spring. The creek then flows along the south side of Angelus Way where there are several driveway bridges over the stream and escaped ornamental vegetation. At the end of Angelus Way the creek flows along the south side of Del Rey Park before flowing under SR 218 from the Frog Pond Wetland Preserve. In its upper reaches the creek is ephemeral. On the east side of SR 218 the creek is channelized along the edge of the road.

Frog Pond is fed by the above described channelized reach of Canyon Del Rey Creek, a tributary to Canyon Del Rey Creek, and springs and runoff from the surrounding neighborhoods (CSUMB 2014). The pond typically dries up in late summer. The tributary to Canyon Del Rey Creek flows into the pond through a culvert under General Jim Moore Boulevard. This tributary drains a small canyon south of South Boundary Road. The BSA and Canyon Del Rey/218 segment run along the northern side of the canyon.

Several stormwater detention basins were observed in the BSA; west of General Jim Moore Boulevard, south of 9th Street east of SR 1, on the northwest side of California Avenue, and northeast of Estrella Del Mar Way. All of these detention basins are constructed and regularly maintained. No wetland vegetation was observed at any of the basins during the reconnaissance survey. A formal jurisdictional delineation would be required to assess the jurisdictional limits and regulatory oversight of these features.

The above described features are potentially subject to USACE, RWQCB, CDFW, and CCC oversight. The lakes and many of the wetlands are permanently wet and have a direct hydrologic connection to the Pacific Ocean (a traditional navigable water as defined by USACE). The USACE is expected to assert jurisdiction under Section 404 of the Clean Water Act (CWA) over stream, lake, and wetland features to the "ordinary high water mark" (OHWM), and to the edge of those wetlands with all three criteria that define federal wetlands: hydric soils, hydrophytic vegetation, and wetland hydrology. The RWQCB also has jurisdiction over waters of the U.S. under Section 401 of the CWA. The RWQCB may also assert jurisdiction over waters of the State under the Porter-Cologne Water Quality Control Act.

The CDFW has jurisdiction over lakes, streams, and associated riparian areas under the California Fish and Game Code Section 1600 et seq. The CDFW has traditionally regulated activities within the bed and bank of lakes and streams, extending to the top of bank or edge of the riparian dripline, under its Lake and Streambed Alteration Program. The CDFW may also regulate activities conducted adjacent to but outside these areas, if the activity results in a substantial alteration of the stream or lakebed downslope of the activity, such as through placement of materials that wash into a water body.

4.4 Wildlife Movement

Wildlife movement corridors, or habitat linkages, are generally defined as connections between habitat patches that allow for physical and genetic exchange between otherwise isolated animal populations. Such linkages may serve a local purpose, such as providing a linkage between foraging and denning areas, or they may be regional in nature. Some habitat linkages may serve as migration corridors, wherein animals periodically move away from an area and then subsequently return. Others may be important as dispersal corridors for young animals. A group of habitat linkages in an area can form a wildlife corridor network. The California Essential Habitat Connectivity Project commissioned by the California Department of Transportation (Caltrans) and CDFW; identifies “Natural Landscape Blocks” which support native biodiversity and the “Essential Connectivity Areas” which link them (Spencer et al. 2010).

Wildlife movement corridors can be both large and small in scale. Riparian corridors and waterways including the Salinas River, Laguna Grande, Roberts Lake, and Canyon Del Rey Creek watersheds provide local scale opportunities for wildlife movement throughout the BSA. Existing Trails and roads within the BSA also act as corridors for wildlife movement, particularly for relatively disturbance tolerant species such as red fox, coyote, raccoon, skunk, deer, and bobcat. On a larger scale, both Natural Landscape Blocks and Essential Connectivity Areas are mapped within portions of the Canyon Del Rey/ SR 218, Ryan Ranch, National Monument Loop, and Northern Loop segment in BIOS (CDFW 2019b). These landscape blocks and linkages connect Fort Ord National Monument at the northern extent to the Carmel Valley and the Santa Lucia Mountain Range along the coastline. The eastern portion of the BSA represents a large area of relatively undisturbed natural habitat within a broader area of similar natural habitat that extends relatively uninterrupted from San Luis Obispo to the Monterey peninsula. Overall, this area represents important natural habitat for a wide range of species and supports genetic connectivity and movement along much of the central coast of California. A portion of the BSA along the Northern Loop segment extending east from the CSUMB campus and following Inter-Garrison Road is within a mapped Natural Landscape Block. This landscape block extends to the east of the BSA and connects to another distinct natural area just south of the BSA and the Ryan Ranch segment of the alignment. The Canyon Del Rey/ SR 218, Ryan Ranch, National Monument Loop, and Northern Loop segments are generally located along the edges of existing development within the cities of Monterey, Del Rey Oaks, Seaside, and Marina. There is less potential for wildlife movement in these areas due to the proximity to developed areas.

There is also some open space along the CSUMB Loop North and CSUMB Loop South segments on the CSUMB campus. These open spaces occur in patches within existing development, such as the CSUMB stadium complex, residential development, and SR 1. Movement between these areas can occur within undeveloped areas and coast live oak woodland patches scattered throughout the CSUMB Loop North and CSUMB Loop South segments on the CSUMB campus. However, these areas are not considered essential connectivity areas and most wildlife species that would utilize such connections are likely to be urban, disturbance tolerant species such as raccoon, skunk, opossum,

and black tailed deer. The Monterey dusky-footed woodrat is also likely to use these areas as a small local corridor for movement.

Along the Northern Loop and Northern Marina segments there is potential for movement from the Salinas River. The riparian corridor of the Salinas River is a significant corridor for wildlife movement between the coast and inland areas of the Salinas Valley, and was identified as one of six key habitat linkages in Monterey County (Monterey County 2008). The Trail alignment in this area runs along the top of the bluff just above the riparian corridor.

Developed areas of the BSA where the alignment would run through urban areas do not function as essential connectivity areas or as important wildlife corridors due to previous use and disturbance.

4.5 Resources Protected by Local Policies and Ordinances

Protected Trees

Areas of the BSA fall within the jurisdiction of the City of Monterey, City of Del Rel Oaks, City of Seaside, City of Marina, Monterey County, and CSUMB. The General Plans and Municipal codes of these governing agencies include goals, policies, and ordinances intended to protect, preserve and enhance natural habitats and biological resources to varying degrees. The Municipal Codes for the City of Monterey, City of Del Rel Oaks, City of Seaside, City of Marina, and Monterey County all require permitting for tree removal, and some provide additional protection for landmark or heritage trees. The City of Monterey has designated 15 landmark trees, none of which occur in the BSA. Additionally, the City of Monterey, City of Del Rel Oaks, City of Seaside, City of Marina, Monterey County, and CSUMB include specific protections for oak woodlands.

Trees of sufficient size and species to require agency permitting were observed throughout the BSA, including oak woodlands. Additionally, a row of Eucalyptus trees along Beach Road within the Marina Trail segment BSA have been designated by the City of Marina as landmark trees.

CNPS Plant Reserves

A series of small protection areas (9 in total) were established by the US Army in the late 1960s at the encouragement of a local member of the CNPS (Griffin 1976). Through the 1970s and 1980s these protection areas continued to be included on the Fort Ord master plans and were afforded administrative protection to preserve examples of the natural habitats on Fort Ord, particularly maritime chaparral. A map from 1980 depicts 10 preservation areas (US Army 1980). The 1993 Final Environmental Impact Report (EIR) for the disposal and reuse of Fort Ord identifies 11 native plant reserves and one butterfly reserve.

4.6 Habitat Conservation Plans

The Fort Ord Habitat Conservation Plan (HCP) has been under development for a number of years. When and if that HCP will be adopted is currently unknown. The draft HCP has included and addressed potential impacts from the FORTAG project; when and if the FORA HCP is adopted, the FORTAG project would not be in conflict with the conditions of that HCP. Currently, there are no other HCPs, NCCPs or other State, regional or local conservation plans in place. The HCP is largely based on the Fort Ord Habitat Management Plan (HMP), which was developed for the disposal and

reuse of the former Fort Ord. The HMP provides the framework for special status species and habitat conservation on the former Fort Ord, and the HCP will facilitate the issuance of incidental take permits under Section 10(a)(1)(B) of the FESA and Section 2081 of the CESA to non-Federal land recipients. Adherence to the conditions within the HMP and corresponding 1993 USFWS Biological Opinion (BO) in the interim has generally been considered appropriate for addressing potential impacts to species covered under the HCP when and if finalized and adopted. The HMP itself is not a Conservation Plan however, and any lack of adherence to the HMP would not strictly be a conflict under CEQA. The HMP identifies habitat management requirements for the disposal and reuse of former Fort Ord lands. Reserve parcels identified by the BRP and HMP are largely contained within the Fort Ord National Monument, on undeveloped lands east of the BSA. Parcels covered under the HMP within the BSA are:

- Designated for Development
- Designated for Development with Reserve or Restrictions
- Designated as a Habitat Reserve
- Designated as a Habitat Corridor

Development

Parcels designated for development under the HMP have no management restrictions under the HMP. Most of the parcels in the BSA that are covered by the HMP are designated for development (Figure 8). Biological resources within these parcels are “not considered essential to the long-term preservation of sensitive species at former Fort Ord.” The USFWS BO, however, still requires the identification of sensitive species and resources that may be salvaged for restoration efforts due to remedial activities on the former Fort Ord (e.g., unexploded ordnance removal, clean-up of contamination) on the reserve parcels (USFWS 1993). Additionally, the BO assumes that no parcels occupied by the Smith’s blue butterfly would be developed and impacts to Federally listed species would require agency consultation and permitting.

Development with Reserve or Restrictions

Parcels designated for development with reserve or restrictions contain reserve holdings or have some restrictions to protect biological resources. Within the BSA, parcels designated for development with reserve or restrictions in the North Marina Trail segment include the North Fritzsche Habitat Reserve near the Marina Airport. Development on the parcel is restricted to airport support facilities (utilities, etc.) and a six-lane road.

On the North Loop and CSUMB Loop North Trail segments, a landfill parcel is designated for development with reserve or restrictions which allows for development of 81 acres, with the remaining 227 acres managed as a preserve.

The Canyon Del Rey/218 Trail segment also includes a parcel designated for development with reserve or restrictions. This parcel is located east of the Frog Pond and contains the headwaters of the ephemeral tributary to Canyon Del Rey Creek that drains into the Frog Pond. The Management restrictions on this parcel require that no stormwater runoff from development of the parcel be allowed to enter the Habitat Reserve Parcel adjacent to the Frog Pond. Additionally, development of the proposed trail would be required to comply with the development restrictions identified in the 2005 USFWS MOA for development on the Del Rey Oaks parcels (borderland parcels surrounding the Habitat Reserve Parcel).

The western ends of the CSUMB Loop North and CSUMB Loop South cross parcels designated with reserve restrictions. Parcels along the Highway 1 corridor are managed by Caltrans, development within these parcels includes transportation facilities and improvements. On the west side of Highway 1 parcels are within the State Parks Reserve along the coast. Development within these parcels is limited to 186 acres of development for recreational use, including trails.

Habitat Reserves

Development within parcels designated as habitat reserves is not allowed unless specified under the HMP; however, development of these parcels would not necessarily be considered an impact under CEQA. The goals of the HMP are to manage these lands for conservation and enhancement of habitat for threatened and endangered species. Within the BSA parcels designated as habitat reserves include;

- The Monterey Peninsula Regional Parks Natural Expansion Area parcel on the west side of General Jim Moore Boulevard and the frog pond,
- The eastern side of the Northern Loop segment East Garrison parcel,
- The Salinas River Habitat Management Area east of the North Loop Trail segment,
- And the UC/NRS Fort Ord Natural Reserve on the North Marina Trail segment east of Tallmon Street.

Habitat Corridors

Parcels designated as habitat corridors are lands between habitat reserves that are intended to promote connectivity between reserve areas. One parcel designated as a habitat corridor occurs in the BSA on the south side of Inter Garrison Road west of the Jerry Smith Trail. The North Loop Trail segment runs across the northern end of this parcel, more or less parallel with Inter Garrison Road. Under the HMP some development will be allowed on this parcel for recreational use, including development around an existing camp ground, youth nature programs and Trails. Much of the National Monument Loop parcels are considered Borderland Development Areas Along NRMA Interface.

4.7 Coastal Zone

The California Coastal Commission (CCC) has jurisdiction over wetlands in the coastal zone. The CCC definition of wetlands differs somewhat from other agencies and includes lands within the coastal zone that are covered periodically or permanently with shallow water, and includes saltwater marshes, freshwater marshes, open or closed brackish water marshes, swamps, mudflats, and fens (Coastal Act Section 30121). Coastal wetlands include “land where the water table is at, near, or above the land surface long enough to promote the formation of hydric soils or to support the growth of hydrophytes, and shall also include those types of wetlands where vegetation is lacking and soil is poorly developed or absent as a result of frequent and drastic fluctuations of surface water levels, wave action, water flow, turbidity or high concentrations of salts or other substances in the substrate” (CCR Section 13577(b)). The western ends of the CSUMB Loop North and South segments fall within the City of Marina’s coastal zone, and the Canyon Del Rey/218 segment falls within the City of Seaside and City of Monterey’s coastal zones at Laguna Grande. Within the coastal zone at Laguna Grande, lakes, streams, wetlands, and riparian areas in which hydrophytes such as willows are present all meet the CCC definition of wetlands. The CCC also identifies other

environmentally sensitive habitat areas (ESHAs) as any area within the coastal zone in which plant or animal life or their habitats are either rare or especially valuable because of their special nature or role in an ecosystem and which could be easily disturbed or degraded by human activities and developments. The cities of Monterey and Seaside each have an adopted Local Coastal Program that identifies the lakes, streams, wetlands and riparian areas in the BSA at Laguna Grande as ESHA. In addition, oak woodlands and dunes such as those in the Northern Marina Trail segment may also meet criteria to be considered ESHA. Definitions of ESHA in neighboring jurisdictions are similar.

Potentially jurisdictional aquatic resources are mapped in Appendix A, Figure 5. The agencies that typically assert jurisdiction are also noted for each type. It should be noted that the Figure was generated through aerial interpretation, vegetation mapping, review of topographic data, and reconnaissance-level site visits; a jurisdictional delineation was beyond the scope of this BRA.

The agencies make the final determination regarding limits of jurisdiction, typically at the time permits are requested for activities within these areas. Additional wetlands or waters, if discovered within the Plan Area would require evaluation as potentially subject to CCC, CDFW, RWQCB, and/or USACE jurisdiction(s). This analysis serves as the basis for indicating whether additional permits or approvals will be required from USACE, RWQCB, CDFW, and CCC.

5 Impact Analysis and Mitigation Measures

5.1 Overview

This impact analysis is based on a review of existing biological conditions within a BSA that represents a significantly larger area than that of the project's impact footprint. The BSA was designed to support design modifications, and adjustments to the Trail corridor throughout the final design stages. Identification of sensitive resources at this early stage can support avoidance and/or minimization of potential impacts to sensitive biological resources by providing baseline information that would support minor adjustments to the Trail alignment. We have reported on the acreages of vegetation communities and special status species habitats within the BSA; however, the actual impacts from project development would be significantly less than the acres herein reported for the BSA. The final Trail is anticipated to be not more than a 16-foot wide Trail (inclusive of Trail and shoulder) in most areas. Actual impacts to vegetation communities and potential impacts to special status species would be a result of the development of this corridor and any adjacent staging/mobilization areas. Impacts to sensitive biological resource are analyzed accordingly and are not considered as permanent or temporary impacts to the entire BSA. Much of the proposed alignment is within previously disturbed or developed areas, or areas designated by the HMP for development. However, the proposed Trail alignment crosses, and is adjacent to several natural vegetation communities. Potential for the proposed project to result in significant impacts to special status biological resources is therefore addressed in detail below.

5.2 Special Status Species

The proposed project would have a significant effect on biological resources if it would:

- a) *Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service.*

5.2.1 Special Status Plants

Four special status plant species are present within the BSA: Monterey spineflower, Monterey gilia, Hickman's onion, and sandmat manzanita. Monterey cypress and Monterey pine also occur in the BSA; however, not in natural stands, and as such these individuals are not considered special status. An additional 38 special status species have potential to occur within the BSA based upon known ranges, habitat preferences, species occurrence records from the vicinity of the BSA, and presence of suitable habitat. Many of these species typically bloom in the spring/early summer and were not identifiable during the time of the mid-summer reconnaissance survey, nor were they expected to be. The assessment for potential impacts to special status plants is based on a habitat assessment and known occurrence records. Seasonally-timed, protocol-level plant surveys would identify the actual impacts to specific species, and the aerial extent and number of individuals being impacted, based on the final Trail design, prior to the various construction phases.

Construction of FORTAG would require clearing of vegetation up to a 16-foot swath for most of the alignment proposed in undeveloped areas. Side paths proposed in some areas would expand path width by approximately 10 feet. Vegetation clearing would include chaparral and oak woodland habitats on the former Fort Ord, and potential wetland habitats at Laguna Grande, Frog Pond, and Work Memorial Park. The Canyon Del Rey/SR 218 segment running through the Frog Pond Wetland Preserve would be reduced to an 8-foot width, with the 12 foot wide switchback elevated above riparian habitat, and wWetland or other jurisdictional areas would be avoided to the maximum extent feasible. Undercrossings at Reservation Road, General Jim Moore Boulevard, and SR 218 would also require ground disturbance and removal of vegetation. Additionally, access for equipment and construction is also likely to create disturbance to existing vegetation communities; this would be limited as much as practical to a 20-foot corridor. It is highly likely that development of the final project footprint would require removal of some federally and state listed plants; specifically, Monterey spineflower and Monterey gilia. Impacts to listed species would require consultation with CDFW and USFWS. It is highly likely that development of the final project footprint would require removal of some federally and state listed plants; specifically, Monterey spineflower and Monterey gilia. Impacts to listed species would require consultation with CDFW and USFWS regarding incidental "take" authorizations.

Impacts to CRPR 1B.1 or 1B.2 plant species would only be considered significant if the loss of individuals represented a population-level impact that would jeopardize the viability of a local or regional population. Many of the non-listed species have a wider distribution beyond the Monterey Bay area. Impacts to a small number of individuals of these species from project development would not jeopardize the viability of regional populations. Several of the non-listed species are restricted to a more local distribution, including Toro manzanita, sandmat manzanita, Pajaro manzanita, Fort Ord spineflower, Eastwood's goldenbush and Hickman's cinquefoil. The Fort Ord National Monument and parcels designated as habitat reserves, as well as the larger expanse of natural lands south and east of the BSA include an abundance of suitable habitat and support known populations for these species. The loss of undisturbed vegetation communities that would result from the Trail development is small, and unlikely to impact more than a few individuals of these species, if any. As such, there is low potential for impacts to non-listed species to result in jeopardy to any local or regional populations. Protocol-level plant surveys would be designed to identify any non-listed special status plant populations that would experience a significant impact under CEQA. Where possible, micro-siting within the BSA to avoid rare and listed plants would avoid those impacts; however, design of project elements to avoid and minimize such impacts to special status plants and sensitive vegetation communities would be insufficient to fully mitigate potential impacts to rare and listed species. Impacts to individuals of state and federally listed species, or population-level adverse effects to non-listed species, would be considered significant but can be reduced to a less than significant level through the design of project elements to avoid and minimize such impacts to special status plants and sensitive vegetation communities or through compensatory mitigation as outlined in proposed Mitigation Measures BIO-1(a) through BIO-1(c).

Recommended Mitigation

BIO-1(a) Conduct Special Status Plant Species Surveys

Prior to issuance of grading permits for each individual segment, surveys for special status plants should be completed in all natural vegetation communities and in undeveloped areas (including ruderal, and non-native habitats). The surveys should be floristic in nature and should be seasonally timed to coincide with the target species identified in the project-specific biological analysis. All

plant surveys should be conducted by a qualified biologist during the blooming season prior to any ground disturbance. All special status plant species identified should be mapped onto a site-specific aerial photograph or topographic map with the use of Global Positioning System (GPS) unit. Surveys should be conducted in accordance with the most current protocols established by the CDFW, USFWS, and the local jurisdictions if said protocols exist. A plant survey report should be prepared that: 1) outlines the methodology of surveys and qualifications of surveying biologists; 2) presents the results of the surveys; 3) presents an analysis of potential impacts to non-listed species and a determination of whether or not those impacts could result in jeopardy of a local or regional population; 4) presents a summary of listed species that would be impacted including numbers of individuals and/or acres of occupied habitat; 5) presents the required compensatory mitigation; and 6) recommends any additional tasks that would be required to meet the conditions of Mitigation Measures BIO-1(b) and BIO-1(c). A report of the survey results should be submitted to the implementing entity. The CDFW and/or USFWS may also require documentation of surveys for consultation purposes. If special status plants are identified within or adjacent to proposed disturbance areas, Mitigation Measures BIO-1(b) and/or BIO-1(c) should be implemented. The first of the focused protocol rare plant surveys were completed for the Canyon Del Rey/SR 218 segment, the CSUMB Loop South segment and the CSUMB Loop North segment in the 2019 blooming period. Completed rare plant surveys need not be repeated if construction of a segment occurs within three years of the survey's completion.

BIO-1(b) Implement Special Status Plant Species Avoidance, Minimization, and Mitigation

If federally and/or state listed or CRPR List 1B or 2 species are found during special status plant surveys [pursuant to Mitigation Measure BIO-1(a)], and listed species would be directly and/or indirectly impacted, or there would be a population-level impact to non-listed species, then the Trail should be re-aligned within the BSA to avoid impacting those plant species where and if feasible. Listed and other special status plant occurrences that are not within the immediate disturbance footprint but are located within 50 feet of disturbance limits should be demarcated as an Environmentally Sensitive Area (ESA), and should have bright orange protective fencing installed a minimum of 30 feet beyond their extent prior to and during construction activities. Reduction of avoidance buffer distance must be approved by a qualified biologist. No construction activity should be allowed within these avoidance areas. To avoid encroachment within ESAs, the limits of work should be clearly shown on all project plans and demarcated on site with high visibility fencing. Work in the vicinity of such ESAs should be monitored by a qualified biologist to ensure no encroachment. If significant impacts to special status plants cannot be avoided, Mitigation Measure BIO-1(c) should be implemented.

BIO-1(c) Prepare Habitat Mitigation and Monitoring Plan

If federally and/or state listed plants or non-listed special status plant populations [or sensitive natural communities or waters of the U.S. and/or State; see Mitigation Measures BIO-2(b) and BIO-3(b), respectively] cannot be avoided and will be impacted by development of the proposed project, all impacts should be mitigated by the implementing entity at a minimum ratio of 1:1 for occupied habitat area as a component of habitat restoration or through compensatory mitigation. A habitat mitigation and monitoring plan (HMMP) should be prepared by a qualified biologist and submitted to implementing entity for review and approval. (Note: if a federally and/or state listed plant species will be impacted, USFWS and/or CDFW will likely require a restoration plan to be submitted for their

review in support of federal and/or state incidental take authorization[s]). The HMMP should include, at a minimum, the following components:

- Description of the project/impact site (i.e., location, responsible parties, areas to be impacted by habitat type)
- Goal(s) of the compensatory mitigation project [type(s) and area(s) of habitat to be established, restored, enhanced, and/or preserved; specific functions and values of habitat type(s) to be established, restored, enhanced, and/or preserved]
- Description of the proposed compensatory mitigation site (location and size, ownership status, existing functions and values)
- Implementation plan for the compensatory mitigation site (rationale for expecting implementation success, responsible parties, schedule, site preparation, planting plan)
- Maintenance activities during the monitoring period, including weed removal as appropriate (activities, responsible parties, schedule)
- Monitoring plan for the compensatory mitigation site, including no less than quarterly monitoring for the first year (performance standards, target functions and values, target acreages to be established, restored, enhanced, and/or preserved, annual monitoring reports)
- Success criteria based on the goals and measurable objectives; said criteria to be, at a minimum, at least 80 percent survival of container plants and 30 percent relative cover by vegetation type
- An adaptive management program and remedial measures to address any shortcomings in meeting success criteria and/or to address catastrophic events such as wildfires
- Notification of completion of compensatory mitigation and agency confirmation
- Contingency measures (initiating procedures, alternative locations for contingency compensatory mitigation, funding mechanism)

5.2.2 Special Status Wildlife

Eighteen special status wildlife species have potential to occur within the BSA based upon known ranges, habitat preferences, species occurrence records in the vicinity of the BSA, and presence of suitable habitat. All have some potential to occur within the impact footprint of the project corridor. Four of these were observed in or near the BSA during surveys; Cooper's hawk, white-tailed kite, northern harrier, and coast horned lizard. Additionally, sign of American badger was observed and host plants for the Smith's blue butterfly were also observed. Nesting special status bird species and/or nesting migratory birds protected under CFGC may occur throughout the BSA and along the entire proposed impact footprint of the Trail corridor. A potentially beneficial impact of the project for terrestrial special status wildlife would be the development of wildlife movement corridors under General Jim Moore Boulevard and Reservation Road, where undercrossings are proposed. Undercrossings are expected to improve wildlife movement between the former Fort Ord and Frog Pond Wetland Preserve and would reduce the potential for roadkill that could occur when crossing General Jim Moore Boulevard, Canyon Del Rey Boulevard/SR 218, or Reservation Road.

Smith's Blue Butterfly

Smith's blue butterfly is dependent on its host plant for foraging and breeding. If individuals of the host plants [seacliff buckwheat (*Eriogonum parvifolium*) and seaside buckwheat (*Eriogonum latifolium*)] are present within or immediately adjacent to the project corridor, any impacts (damage or removal) to host plants, whether containing eggs and/or larva or not, would be considered a

significant impact under CEQA. Trail design has the flexibility to prioritize avoidance of impacts to Smith's blue butterfly host plants to the greatest extent possible within the BSA. Where direct impacts to host plants cannot be avoided, or where dispersing individuals would be reduced to a less than significant level through implementation of Mitigation Measures BIO-1(d)iii and viii, BIO-1(f), BIO-1(h), BIO-1(i), and BIO-1(j).

California Red-legged Frog

Suitable aquatic breeding habitat for CRLF is present within the BSA at the Frog Pond (Canyon Del Rey/SR 218 segment); however, annual monitoring of this pond for special status amphibians has been negative for CRLF (Anderson 2017). Laguna Grande is not considered suitable habitat based on the presence of predatory fish. The species has a low potential to occur within the BSA and is unlikely to be directly impacted by project activity except in the unlikely event that individuals are dispersing through the project area during construction activity. No impacts to breeding habitat or upland refugia are expected. Impacts to dispersing CRLFs would be reduced to a less than significant level through implementation of Mitigation Measures BIO-1(d)v and viii and BIO-1(f), BIO-1(h), BIO-1(i), and BIO-1(j).

California Tiger Salamander

Suitable aquatic breeding habitat for CTS is present within the BSA at the Frog Pond; however, annual monitoring of this pond for special status amphibians has been negative for CTS (Anderson 2017). Laguna Grande is not considered suitable habitat based on the presence of predatory fish and the perennial hydroperiod of this aquatic feature. CTS is known to breed in vernal pools on the Fort Ord National Monument within dispersal distance of the National Monument Loop and Northern Loop segments, and CTS is known to occur south of the BSA near Jack's Peak. CTS near the Northern Marina and Northern Loop segments may be hybridized with non-native barred salamanders however. CTS may also occur in upland areas of the BSA; however, the extent of upland occupancy by CTS within the BSA is not known. Therefore, all upland CTS habitat is considered potential habitat (i.e., it could provide suitable small mammal burrows for aestivation during the dry season). Loss of CTS upland habitat would be considered a significant impact under CEQA. The BSA includes approximately 497-785.41 acres of upland CTS habitat within 1.3 miles (2.2 kilometers) of potential breeding ponds (Table 6; Figure 6) in the vicinity of the BSA. Table 6 presents the acreage of potential CTS upland habitat in the BSA and the approximate acreage of impacts to potential CTS upland habitat within the preferred and optional Trail segments, assuming a 16-foot Trail width over most of the 28-mile corridor, with some expanded side Trail areas having to 26-foot width. The actual impacts to CTS upland habitat would be determined at the time the final design is completed; however, the numbers presented below are close approximations of the actual loss of potential CTS upland habitat from Trail development. Impacts are presented for four categories related to the distance from known or potential breeding sites.

The potential number of CTS individuals occurring in upland habitat is typically correlated to distance from breeding sites. Mitigation for impacts to upland habitat should thus be based on the distance of impacts from known or potential breeding sites. As summarized by CDFW (2010b), the percentage of individuals expected to occur at various distances from a breeding site has been estimated. Accordingly, acreages of upland habitat have been assigned to four impact categories:

- 0.23 mile (380 meters): Greater than 50 percent of adults, and approximately 50 percent of subadult CTS dispersal from breeding sites
- 0.38 mile (620 meters): 95 percent of CTS dispersal from breeding sites

- 0.62 mile (1.0 kilometer): CTS routine dispersal from breeding sites
- 1.3 miles (2.2 kilometers): Distance adults have been found to disperse from breeding site

Impacts to potential CTS upland habitat is relatively small compared to the total habitat within the BSA. This is in part because the Trail corridor is a small percentage of the BSA, and because much of the proposed Trail alignment is on existing developed areas (i.e., existing Trails and tracks). The total impact area of potential CTS upland habitat in all four categories is approximately ~~55.18~~55.04 acres, based on the current alignment (excluding alignment options). The total impact area of potential CTS upland habitat, including alignment options, in all four categories is approximately ~~66.67~~66.73 acres.

Table 6 Potential CTS Habitat in BSA, and Trail Corridor Impacts to Potential Upland CTS Habitat

Impact Type	Potential CTS Habitat in BSA	Trail Corridor Impacts (acres)	Trail Option Impacts (acres)
Category 1: 0.23 miles	167.46 <u>168.10</u>	10.84 <u>10.70</u>	12.90 <u>12.76</u>
Category 2: 0.38 miles	147.10	9.53	13.55
Category 3: 0.62 miles	257.85	18.15	20.72
Category 4: 1.3 miles	212.36	16.66	19.50

Trail development would not result in direct impacts to known or potential CTS breeding habitat. The species has a moderate potential to occur within the BSA and could be directly impacted (injury or mortality of individuals) by project activity if individuals are dispersing through the BSA during construction activity, or if construction disturbed occupied upland habitat. Impacts to CTS would be reduced to a less than significant level through implementation of Mitigation Measures BIO-1(d)iv and viii, BIO-1(f) and BIO-1(g), BIO-1(f), BIO-1(h), BIO-1(i), and BIO-1(j).

Coast Range Newt

Suitable aquatic breeding habitat for Coast Range newt is present within the BSA at the Frog Pond Wetland Preserve (Canyon Del Rey/SR 218 segment); however, annual monitoring of this pond for special status amphibians has been negative for Coast Range newt (Andersen 2017). Laguna Grande is not considered suitable habitat based on the presence of predatory fish. There is low potential for this species to occur within the BSA, and no impacts to breeding habitat are expected from project development. Direct impacts in the form of injury or mortality could occur if individuals are present during construction activity. Impacts to dispersing Coast Range newt would be reduced to a less than significant level through implementation of Mitigation Measures BIO-1(d)i and viii, BIO-1(f), BIO-1(h), BIO-1(i), and BIO-1(j).

Two-striped Garter Snake

Two-striped garter snake has potential to occur in mesic portions of the BSA including Laguna Grande, Canyon Del Rey Creek, and the Frog Pond (Canyon Del Rey/SR 218 segment). The species may be directly adversely affected by the proposed project if individuals are present in the work areas during Trail construction. Injury or mortality of individuals that may result from construction activity may be considered a significant impact under CEQA. The presence of pedestrians, bicyclists, dogs, and equestrians may affect these species as well, if individuals are harmed or harassed by Trail activity. Injury or mortality from pedestrian and bicycle use is expected to be an unusual occurrence,

as wildlife would generally avoid the paved Trail, and can generally be avoided a low travel speeds. Impacts to this species from construction activity would be reduced to less than significant with the implementation of Mitigation Measures BIO-1(d)i and viii, BIO-1(f), BIO-1(h), BIO-1(i), and BIO-1(j).

Northern California Legless Lizard

Northern California legless lizard has potential to occur in a wide range of habitats across the BSA but is most likely to occur in areas with sufficient moist leaf litter or other ground-cover to support their habitat requirements. They are most likely to occur in the western extent of the BSA but may also occur east of General Jim Moore Boulevard in areas with higher moisture (all Trail segments). The species may be directly affected (injury or mortality) by the Trail construction activities if individuals are present in the work area during construction. The presence of pedestrians, bicyclists, dogs, and equestrians may affect these species as well, if individuals are harmed or harassed by Trail activity. Injury or mortality from pedestrian and bicycle use is expected to be an unusual occurrence, as wildlife would generally avoid the paved Trail, and can generally be avoided a low travel speeds. Impacts to this species from construction activity would be reduced to less than significant with the implementation of Mitigation Measures BIO-1(d)i and viii, BIO-1(f), BIO-1(h), BIO-1(i), and BIO-1(j).

Western Pond Turtle

Western pond turtle has potential to occur in less mesic portions of the BSA including Laguna Grande, Canyon Del Rey Creek, and the Frog Pond (Canyon Del Rey/SR 218 segment). The species may be directly adversely affected by the proposed project if individuals are present in the work areas during Trail construction. Injury or mortality of individuals that may result from construction activity may be considered a significant impact under CEQA. The presence of pedestrians, bicyclists, dogs, and equestrians may affect these species as well, if individuals are harmed or harassed by Trail activity. Injury or mortality from pedestrian and bicycle use is expected to be an unusual occurrence, as wildlife would generally avoid the paved Trail, and can generally be avoided a low travel-speeds. Impacts to this species from construction activity would be reduced to less than significant with the implementation of Mitigation Measures BIO-1(d)i and viii, BIO-1(f), BIO-1(h), BIO-1(i), and BIO-1(j).

Coast Horned Lizard

Coast horned lizard has potential to occur in a wide range of habitats across the BSA where loose and sandy soils occur in generally open areas. They are most likely to occur east of General Jim Moore Boulevard (National Monument Loop segment), along the section south of Inter-Garrison Road (Northern Loop segment), and in the Northern Loop segment south of the Salinas River, but could also occur in any open sandy area within the BSA. The species may be directly affected (injury or mortality) by the Trail construction activities if individuals are present in the work area during construction. The presence of pedestrians, bicyclists, dogs, and equestrians may affect these species as well, if individuals are harmed or harassed by Trail activity. Injury or mortality from pedestrian and bicycle use is expected to be an unusual occurrence, as wildlife would generally avoid the paved Trail, and can generally be avoided a low travel speeds. Impacts to this species from construction activity would be reduced to less than significant with the implementation of Mitigation Measures BIO-2(a1(d)i and viii, BIO-2(c), BIO-21(f), BIO-2(g)1(h), BIO-1(i), and BIO-2(h1(j) would reduce potential impacts to less than significant.

Burrowing Owl

Suitable burrowing habitat is present in annual grassland, low density scrub, and open spaces throughout the BSA. The species is known to occur in the region but does not occur in the abundance seen at inland locations, and thus the species is considered to have a moderate potential to occur within the BSA. Impacts to burrowing owls would be limited to project activity that would directly affect an occupied burrow (temporarily or permanently damage or destroy the burrow), or project activity that would disrupt active breeding or wintering owls within 500 feet of construction activity. Because of the narrow width of the disturbance footprint, direct impacts to active burrows are unlikely; however, owls can be disturbed by construction noise and human activity and may abandon active burrows, including during breeding. The presence of pedestrians, bicyclists, dogs, and equestrians may affect burrowing owls, if individuals are harmed or feel harassed by Trail activity. Injury or mortality from pedestrian and bicycle use is expected to be an unusual occurrence, as wildlife would generally avoid the paved Trail, and can generally be avoided at low travel-speeds. This species may occur in bare patches, ruderal, or grasslands in all Trail segments. Impacts to active burrowing owl burrows would be considered significant under CEQA. Implementation of Mitigation Measures BIO-1(d)ii and viii, BIO-1(f), BIO-1(h), BIO-1(i), and BIO-1(j) would reduce potential impacts to less than significant.

Nesting Raptors, Special Status Birds and Other Protected Birds

Nesting raptors such as white-tailed kite, golden eagle, and Cooper's hawk have the potential to nest in tall trees within or near the BSA (all Trail segments). Northern harrier and horned lark may nest in annual grasslands and open scrubby habitats within the BSA. Suitable habitat for tricolored blackbird is present at Laguna Grande, and to a lesser degree Frog Pond Wetland Preserve (Canyon Del Rey/SR 218 segment). In general, avian species can easily avoid direct impacts from construction activity. Because there are already informal Trails through much of the proposed alignment and project has been designed to occur along the edges of existing development, impacts due to increased human presence and recreational use is not likely to result in a significant impact to highly mobile (non-terrestrial) species such as birds; however, active nests of special status birds and/or raptors could be adversely affected by Trail construction activity. Construction activity around active nests present outside of the impact footprint but in the vicinity of construction could result in nest abandonment as a result of noise or human activity. Nest destruction or nest abandonment of active special status species and/or raptor nests would be considered a significant impact under CEQA. Implementation of Mitigation Measures BIO-1(e), BIO-1(f), BIO-1(h), BIO-1(i), and BIO-1(j) would reduce potential impacts to special status nesting birds to less than significant.

Trail development could result in direct impacts to nesting migratory birds protected under CFGC, during vegetation clearing, grading and other construction activity, through destruction or damage of active nests, or through disturbance to nesting birds from construction activity and noise. Impacts to non-special status migratory birds would generally not be considered significant under CEQA; however, loss of active migratory bird nests through nest destruction or nest abandonment would be a violation of CFGC. Implementation of Mitigation Measure BIO-2(b) would also prevent violations of CFGC. Implementation of Mitigation Measure BIO-1(e) would also prevent violations of CFGC.

American Badger

American badger could occur in any of the natural vegetation communities within the BSA and is most likely to occur in areas away from existing human development, on the eastern side of the

Trail corridor (east side of all Trail segments). American badger typically has a home range of over 1,000 acres and the project has been designed to occur along the edges of existing development; therefore, the project is not expected to infringe significantly into a badger's home range. However, active natal burrows or other occupied burrows could be directly impacted if they are present within the proposed disturbance area at the time of construction. This is a predominantly nocturnal species and impacts due to increased human presence and recreational use along the edges of developed areas are not expected to be a significant, because of the low use that would be expected during badger activity periods. Direct impacts to occupied badger dens could be considered a significant impact under CEQA. Implementation of Mitigation Measures BIO-2(a1(d)i and viii, BIO-2(c), BIO-21(f), BIO-2(g)1(h), BIO-1(i), and BIO-2(h1(j) would reduce potential impacts to less than significant.

Monterey Dusky-footed Woodrat

Monterey dusky-footed woodrat middens were observed in coast live oak habitats throughout the BSA (all Trail segments), and they have the potential to occur throughout any wooded or dense scrub habitat within the BSA. Direct impacts to this species are generally unlikely, as the species is nocturnal and unlikely to remain in the vicinity of human activity; however, if middens are present in the proposed alignment and must be removed this could result in injury or mortality of individuals. Use of the Trail may cause disturbance if dogs are off leash or pedestrians or mountain bikers go off Trail. These impacts would be less than significant with implementation of Mitigation Measures BIO-1(d)vi and viii, BIO-1(f), BIO-1(h), BIO-1(i), and BIO-1(j).

Pallid and Townsend's Big-eared Bats

Pallid bat and Townsend's big-eared bat have low potential to roost in the BSA. Abandoned buildings were observed along California Avenue, at the west end of 8th and 9th streets (CSUMB Loop North segment) and on the north side of Divarty Street (CSUMB Loop South segment), and trees with appropriate structure for roosting may be present in wooded areas of the project corridor (all Trail segments). The proposed project does not include removal of buildings; however, trees large with appropriate structure to support roosting bats may be impacted by Trail development. Injury to, or mortality of roosting bats resulting from tree removal would be considered a significant impact under CEQA. These impacts would be less than significant with implementation of Mitigation Measures BIO-1(d) vii and viii, BIO-1(f), BIO-1(h), BIO-1(i), and BIO-1(j).

Recommended Mitigation Measures

BIO-1 (d) Conduct Special Status Wildlife Pre-Construction Surveys

GENERAL WILDLIFE SURVEYS

Pre-construction clearance surveys for northern California legless lizard, coast horned lizard, two-striped garter snake, western pond turtle and American badger should be conducted within 14 days prior to the start of construction (including staging and mobilization) in areas of suitable habitat. For two-striped garter snake and western pond turtle, these areas are limited to the Canyon Del Rey/SR 218 segment. California legless lizard may be found in undeveloped areas throughout the project corridor. Coast horned lizard and American badger suitable habitats are limited to the Northern Marina, Northern Loop, National Monument Loop, Ryan Ranch, and Canyon Del Rey/SR 218 segments. The surveys should cover the entire disturbance footprint plus a minimum 200-foot buffer within suitable habitat, where permissible, and should identify all special status animal

species that may occur on-site. California legless lizard, coast horned lizard, and two-striped garter snake should be relocated from the site to a safe location within suitable habitat as near to the project area as possible by a qualified biologist.

BURROWING OWL SURVEYS

A qualified biologist should conduct pre-construction clearance surveys prior to ground disturbance activities within suitable natural habitats and ruderal areas throughout the Trail segments to confirm the presence/absence of active burrowing owl burrows. The surveys should be consistent with the recommended survey methodology provided by CDFW (2012). Clearance surveys should be conducted within 30 days prior to construction and ground disturbance activities. If no burrowing owls are observed, no further actions are required. If burrowing owls are detected during the pre-construction clearance surveys, the following measures should apply:

- Avoidance buffers during the breeding and non-breeding season should be implemented in accordance with the CDFW (2012) and Burrowing Owl Consortium (1993) minimization mitigation measures.
- If avoidance of burrowing owls is not feasible, then additional measures such as passive relocation during the nonbreeding season and construction buffers of 200 feet during the breeding season should be implemented, in consultation with CDFW. In addition, a Burrowing Owl Exclusion Plan and Mitigation and Monitoring Plan should be developed by a qualified biologist in accordance with the CDFW (2012) and Burrowing Owl Consortium (1993).

SMITH'S BLUE BUTTERFLY HOST PLANT SURVEYS AND MITIGATION

Prior to grading and construction in undeveloped areas throughout the Trail alignment, an approved biologist should conduct surveys for seacliff buckwheat (*Eriogonum parvifolium*) and seaside buckwheat (*Eriogonum latifolium*), host plants of Smith's blue butterfly in areas of suitable habitat. These surveys can be completed as part of the rare plant surveys conducted under Mitigation Measure BIO-1(a).

If no Smith's blue butterfly host plants are located, no further action is required. If host plants are located within proposed disturbance areas, they should be avoided if feasible. If avoidance is not feasible, the plants should be buffered by a minimum of 25 feet and demarcated as an ESA with high-contrast construction flagging, and no construction activity should be allowed within the buffered avoidance area. If construction would be required within the buffer area, a biological monitor should be present for all work within the buffer avoidance area to ensure no direct impacts to host plants.

If avoidance is not feasible, focused surveys should be conducted to determine presence or absence of the butterfly species. This may include surveys during the adult flight period (mid-June through early September), and/or inspection of host plants for all life forms (egg, larva, pupa, and adult). If individuals of any life stage that may be impacted by the proposed project are detected during focused surveys, the plant cannot be disturbed without take authorization from USFWS. Only a USFWS permitted biologist would be allowed to relocate occupied host plants.

CALIFORNIA TIGER SALAMANDER

Prior to grading and construction in natural areas of all segments containing suitable upland habitat, a qualified biologist should conduct a preconstruction survey for CTS. The survey should include a transect survey over the entire project disturbance footprint (including access and staging areas),

and mapping of burrows that are potentially suitable for salamander occupancy. If any CTS is detected, no work can be conducted until the individual leaves the site of their own accord, unless federal and state “take” authorization has been issued. Typical preconstruction survey procedures, such as burrow scoping and burrow collapse, cannot be conducted without federal and state permits. If any life stage of CTS is found within the survey area, the USFWS and CDFW should be consulted to determine the appropriate course of action to comply with the FESA and CESA, if permits are not already in place at the time of construction.

CALIFORNIA RED-LEGGED FROG

Within 24 hours prior to grading and construction in undeveloped areas of the Ryan Ranch, Canyon Del Rey/SR 218, National Monument Loop, Northern Loop, and Northern Marina segments, a clearance survey for CRLF should be conducted by a qualified biologist. If a CRLF is detected during the survey, the implementing entity should consult with the USFWS. Project activities should not occur until the individual has left the site on its own accord. If CRLFs are to be relocated, a formal take authorization issued by the USFWS must be obtained prior to relocation. No CRLFs should be relocated or handled without express permission from USFWS.

MONTEREY DUSKY-FOOTED WOODRAT

A qualified biologist should conduct a pre-construction survey for woodrats no more than 14 days prior to construction. Middens within 50 feet of project activity that would not be directly impacted by project activity should be demarcated with a 10-foot avoidance buffer and left intact. If a midden(s) that cannot be avoided are found during the pre-construction survey, an approved biologist should monitor the dismantling of the midden by a construction contractor to assist with the goal of ensuring the individuals are allowed to leave the work areas unharmed before on site activities begin.

SPECIAL STATUS BATS

If trees of sufficient size and structure (i.e., mature trees with hollows and crevices) to support roosting bats are slated for removal during construction, a preconstruction bat emergence survey should be conducted by a qualified biologist to determine if the tree functions as a roost. Emergence times may vary dependent on species, weather conditions, and time of year and should occur when conditions are favorable (higher temperatures, high humidity, low wind, no precipitation), and timed to capture bat emergence (typically occurring between sunset and sunrise). Maternity season for bats ranges from May 1 through August 31. After September, bats begin to enter their hibernaculum stage in preparation for colder months and may not emerge from their roosts, and emergence surveys would not be conclusive.

The specific timelines for implementation of management of roosting bats within the project corridor would be determined based upon the results of the emergence surveys. Once the species has been determined, areas to relocate roosts to may also be identified (i.e. other areas away from tree removal area). Relocation sites away from the project impact area can be enhanced with additional bat boxes or structures depending on the species. Alternative bat roosting habitat should be installed as far in advance of the humane eviction/exclusion as possible to increase likelihood of their discovery and use by the bats being evicted. Therefore, the installation of alternative bat roosting structures should be initiated as soon as active roosts are identified. After alternative roost structures have been installed, eviction measures can be implemented. Install exclusion netting and socks (specific for bats to prevent re-entry) at roost openings to allow bats to exit but prevent their

re-entry into the roost. Nets and socks would have to be regularly checked to prevent wildlife entrapment. Exclusion devices should be left in place and monitored daily for seven days to confirm the exclusion is successful prior to tree removal. Tree removal should be monitored by a qualified bat biologist in case any further individual relocation is necessary.

REPORTING

A report of all pre-construction survey results should be submitted to the implementing entity for its review prior to the start of demolition. The report should include a description of the survey methodology for each species, the environmental conditions at the time of the survey(s), the results of the survey, any requirements for addressing special status species identified during surveys, and the biological qualifications of the surveyors. The report should be accompanied by maps and figures showing the location of any special status species occurrences and associated avoidance buffers.

BIO-1 (e) Conduct Nesting Bird Preconstruction Surveys

Ground disturbance and vegetation removal activities should be restricted to the non-breeding season (September 16 to January 31) for all segments when feasible. For ground disturbance and vegetation removal activities occurring in all project areas during the bird nesting season (February 1 to September 15), general pre-construction nesting bird surveys should be conducted by a qualified biologist for all migratory birds, including special status birds and raptors (i.e., northern harrier, Cooper's hawk, horned lark, tricolored blackbird and white-tailed kite) not more than 14 days prior to construction activities involving ground clearing, vegetation removal/trimming, or building demolition. The surveys should include the disturbance area plus a 200-foot buffer around the site if feasible, a 500-foot buffer for tricolored blackbird and white-tailed kite. If active nests are located, an appropriate avoidance buffer should be established within which no work activity will be allowed which would impact these nests. The avoidance buffer would be established by the qualified biologist on a case-by-case basis based on the species and site conditions. In no cases should the buffer be smaller than 50 feet for non-raptor bird species, 200 feet for raptor species, a 500-foot buffer for tricolored blackbird and white-tailed kite. Larger buffers may be required depending upon the status of the nest and the construction activities occurring in the vicinity of the nest. If fully protected White-tailed kites are documented nesting within 500 feet of construction activities, CDFW should be consulted on appropriate avoidance and minimization methods, which would likely include work restrictions within 500 feet of the nest, biological monitoring for activity within the nest's line-of-sight, etc. The buffer area(s) should be closed to all construction personnel and equipment until juveniles have fledged and the nest is inactive. The implementing entity-approved biologist should confirm that breeding/nesting is completed and young have fledged the nest prior to removal of the buffer.

BIO-1 (f) Implement Biological Resources Avoidance and Minimization

The following measures should be applied to all segments to avoid impacts to sensitive species and biological resources. The implementing entity should be responsible for implementing selected measures.

- Ground disturbance should be limited to the minimum necessary to complete the project. The limits of disturbance for each construction phase should be flagged. Areas of special biological concern within or adjacent to the limits of disturbance should have highly visible orange construction fencing installed between said area and the limits of disturbance.

- All construction occurring within or adjacent to natural habitats that may support Federally and/or State listed endangered/threatened species, State fully protected species, and/or special status species should have a qualified biological monitor present during all initial ground disturbing/vegetation clearing activities.
- No endangered/threatened species should be captured/handled, relocated, harmed, or harassed without express written permission from the CDFW and/or USFWS.
- If at any time during construction an endangered, threatened, or fully protected species enters the construction site or otherwise may be impacted, all construction activities should cease. A CDFW/USFWS-approved biologist should document the occurrence and consult with the CDFW and USFWS, as appropriate, to determine whether it was safe for project activities to resume.
- At the end of each workday, excavations should be secured with cover or a ramp provided to prevent wildlife entrapment.
- All trenches, pipes, culverts or similar structures should be inspected for animals prior to burying, capping, moving, or filling.
- If night work is required, all construction lighting should be pointed down and directed only on the work area.
- The implementing entity should approve one or more qualified biologists to oversee and monitor biological compliance for the project. At least one qualified biologist should be present during all initial ground disturbing activities, including vegetation removal to recover special status animal species unearthed by construction activities.

BIO-1(g) Implement California Tiger Salamander Compensatory Mitigation

If California tiger salamander habitat cannot be avoided, the implementing entity should preserve off-site suitable upland habitat and/or purchase credits at an approved conservation bank as compensatory mitigation to offset impacts to suitable California tiger salamander upland habitat. The compensatory mitigation should incorporate the conditions and compensatory mitigation requirements specified in the incidental take permit(s) and/or incidental take statement that could be issued by CDFW and USFWS for this project but should meet the minimum standards specified in this measure. Compensatory mitigation should be provided at a ratio of not less than 0.5:1 (area mitigated: area impacted) for Categories 3 and 4 upland habitat and 1:1 for Categories 1 and 2 habitat. Compensatory mitigation should occur off-site. Areas proposed for preservation must contain verified California tiger salamander habitat within 1.3 miles of a known breeding pond.

The compensatory mitigation area(s) should have a restrictive covenant (e.g., conservation easement) prohibiting future development/disturbance and should be managed in perpetuity to encourage persistence and enhancement of the preserved target species. Compensatory mitigation lands cannot be located on land that is currently held publicly for resource protection, unless a portion of such land is degraded/destroyed or otherwise not functioning as pre-disturbance, intact natural habitat (e.g., abandoned agricultural field) and could be restored. The compensatory mitigation areas should be managed by a conservation lands management entity or other qualified easement holder.

The CDFW and organizations approved by CDFW that meet the criteria below may be considered qualified easement holders for those species for which the CDFW has regulatory authority. To qualify as a “qualified easement holder” a private land trust must at a minimum have:

1. Substantial experience managing conservation easements that are created to meet mitigation requirements for impacts to special-status species;

2. Adopted the Land Trust Alliance's Standards and Practices; and;
3. A stewardship endowment fund to pay for its perpetual stewardship obligations.

Other specific conditions for qualified easement holders may be outlined in incidental take permit(s) and/or incidental take statement that could be issued by CDFW and USFWS for this project.

The implementing entity should determine whether a proposed easement holder meets these requirements. The implementing entity should also be responsible for donating to the conservation easement holder fees sufficient to cover administrative costs incurred in the creation of the conservation easement (appraisal, documenting baseline conditions, etc.) and funds in the form of a non-wasting endowment to cover the cost of monitoring and enforcing the terms of the conservation easement in perpetuity. The amount of these administrative and stewardship fees should be determined by the conservation easement holder in consultation with the implementing entity.

Conservation easement(s) should be held in perpetuity by a qualified easement holder (as defined above), and be subject to a legally binding agreement that should: (1) be recorded with the County Recorder(s); and (2) contain a succession clause for a qualified easement holder if the original holder is dissolved.

The following factors should be considered in assessing the quality of potential mitigation habitat: (1) current land use, (2) location (e.g., habitat corridor, part of a large block of existing habitat, adjacency to source populations, proximity to potential sources of disturbance), (3) vegetation composition and structure, (4) slope, (5) soil composition and drainage, and (6) level of occupancy or use by all relevant species.

To meet the requirement that the mitigation habitat is of value equal to, or greater than, the habitat impacted on the project site, the mitigation habitat must be either "suitable habitat" or "enhanced habitat" as described below:

SUITABLE HABITAT

To meet the requirements for suitable habitat that provides equal or greater habitat value for listed animal species than the impacted habitat, the habitat must:

4. Provide habitat for special status animal species, such that special status animal species populations can regenerate naturally when disturbances are removed;
5. Not be characterized by (or adjacent to areas characterized by) high densities of invasive species, such as yellow star-thistle, or species that might jeopardize habitat recovery and restoration;
6. Not contain hazardous wastes that cannot be removed to the extent that the site could not provide suitable habitat; and
7. Not be located on land that is currently publicly held for resource protection.

ENHANCED HABITAT

If suitable habitat is unavailable, or in lieu of acquiring already suitable special status animal species habitat, the applicant may enhance potential habitat that:

8. Is within an area with potential to contribute to habitat connectivity and build linkages between populations;

9. Consists of actively farmed land or other land containing degraded habitat that will support enhancement;
10. Supports suitable soils, slope, and drainage patterns consistent with special status animal species requirements;
11. Cannot be located on land that is currently held publicly for resource protection; and
12. Does not contain hazardous wastes or structures that cannot be removed to the extent that the site could not provide suitable habitat.

ENHANCED HABITAT STANDARDS

For enhanced habitat conditions to equal or exceed habitat conditions on the project site, the enhanced habitat should meet the following habitat criteria: After five years, these sites must consist of suitable habitat or contain other habitat characteristics (e.g., small mammal burrows in upland habitat for California tiger salamander habitat, wetlands, ponds, etc.) that are consistent with the known ecology of the special status animal species to which compensatory mitigation is being applied and the habitat components for which the mitigation is compensating for.

BIO-1 (h) Provide Worker Environmental Awareness Program (WEAP)

Prior to initiation of construction activities (including staging and mobilization) the implementing entity should arrange for all personnel associated with project construction to attend WEAP training, conducted by an approved biologist, to aid workers in recognizing special status resources that may occur in the construction area. The specifics of this program should include identification of the sensitive species and habitats, a description of the regulatory status and general ecological characteristics of sensitive resources, and review of the limits of construction and mitigation measures required to reduce impacts to biological resources within the work area. A fact sheet conveying this information should also be prepared for distribution to all contractors, their employers, and other personnel involved with construction. All employees should sign a form provided by the trainer indicating they have attended the WEAP and understand the information presented to them. The form should be submitted to the implementing entity to document compliance.

BIO-1 (i) Perform Biological Monitoring

A qualified biological monitor should be present for all ground clearing and vegetation removal in areas of natural vegetation within all segments. Daily monitoring activity should include morning clearance sweeps for special status species prior to new ground disturbance or vegetation removal. In addition to general biological monitoring, a qualified CTS biologist should be present during all work in suitable habitat on the Ryan Ranch, Canyon Del Rey/SR 218, National Monument Loop, Northern Loop, and Northern Marina segments to monitor specifically for CTS. The monitor should have the authority to stop work if special status species are discovered on site or if special status species are at risk of harm as a result of project activity. A sufficient number of monitors should be available to directly monitor ground clearing and vegetation removal at all times and to clear areas in advance of grading and vegetation clearing activity. The number of monitors should be based on the type, location and extent of construction activity and the number of crews and crew locations working at any one time to ensure monitoring is effective in reducing impacts to special status species. The biological monitor should capture and relocate any non-listed special status species to the closest suitable habitat. Listed species cannot be handled without prior federal and state "take" authorizations. The monitor(s) should maintain daily monitoring logs and document all observations

of special status species and all incidents of wildlife relocation. A final monitoring report should be prepared to summarize the results of biological monitoring, including the total number of days of monitoring, all special status species observations, and the results of any wildlife relocations.

BIO-1 (j) Implement Wildlife Avoidance and Minimization

The following measures are required to avoid or minimize impacts to special status species in all Trail segments:

- Activities onsite should be restricted to daylight hours to the maximum extent possible.
- All trenches, pipes, culverts or similar structures should be inspected for animals prior to burying, capping, moving, or filling.
- All construction occurring within/adjacent to the Northern Marina, Northern Loop, National Monument Loop, Ryan Ranch, and Canyon Del Rey/ SR 218 and segments (including riparian habitats and wetlands) should be completed between April 1 and October 31, if feasible, to avoid impacts to California tiger salamander.
- If federal or state listed species are detected during preconstruction surveys, the implementing entity should consult with CDFW and/or USFWS. Construction activities should not occur until the individual has left the site. If federal or state listed species are to be relocated to the nearest appropriate habitat, this can only occur if CDFW and/or USFWS have issued formal take authorization, and the relocation is conducted by a CDFW- and/or USFWS-approved biologist. No endangered/threatened species should be captured and relocated without express permission from the CDFW and/or USFWS.

If at any time during project activities an endangered/threatened species enters the work area or otherwise may be impacted by the project, all project activities should cease. A qualified biologist should document the occurrence and consult with CDFW and USFWS, as appropriate, to determine whether it was safe for project activities to resume.

5.3 Sensitive Plant Communities

The proposed project would have a significant effect on biological resources if it would:

- b) Have a substantial adverse impact on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Wildlife or US Fish and Wildlife Service.*

Sensitive natural communities known to occur within the BSA which may be impacted by the proposed project include central dune scrub, central maritime chaparral, coastal and valley freshwater marsh, Riparian woodlands, chamise chaparral, woolly-leaf manzanita, coyote brush scrub, sandmat manzanita chaparral, and chamise – black sage chaparral. Arroyo willow and riparian woodlands are also considered sensitive and were observed in the BSA (National Monument Loop, CUMB North Loop, Canyon Del Rey/SR 218, and Ryan Ranch segment). Other natural communities included in the California Sensitive Natural Communities List are also likely to be present in the BSA but have not been mapped on a broad scale. One federally designated critical habitat unit for Monterey spineflower occurs within the BSA at the Northern Loop segment and would be affected by construction of the Trail within this critical habitat unit. The 2002 BO addressing impacts to Monterey spineflower critical habitat for the disposal and reuse of Fort Ord also allows development of trails within the habitat corridor parcel, while maintaining a high habitat value

(USFWS 2002b). No sensitive natural communities were observed in the Northern Marina segment or options. The lakes, streams, wetlands and riparian areas in the BSA at Laguna Grande are identified as ESHA under the adopted Local Coastal Program. In addition, oak woodlands and dunes such as those in the Northern Marina segment may also meet criteria to be considered ESHA. Definitions of ESHA in neighboring jurisdictions are similar. Direct impacts to sensitive habitats, critical habitats, and ESHA could occur through ground disturbance or vegetation removal and conversion of habitats to development of a multi-purpose paved Trail. Indirect impacts could also occur through the trampling of vegetation (e.g., people or horses going off Trail), establishment of non-native invasive species, and the introduction of pathogens. Impacts would be less than significant with mitigation incorporated. Based on the project alignment, the project would potentially result in permanent impacts to approximately 4.4655 acres of sensitive natural communities as presented in Table 7. The project would potentially result in approximately 0.79 acre of impacts to ESHA.

Table 7 Sensitive Vegetation Community Impacts

Sensitive Vegetation Community	Impacts in Proposed Alignment (acres)	Impacts in Optional Alignment (acres)
Dune Scrub	1.63	1.63
Freshwater Emergent Wetland	0.16	0.19
Manzanitas Chaparral	1.77	2.17
Sandmat Manzanita Chaparral	0.11	0.12
Arroyo Willow	0.2651	0.2651
Riparian Woodland	0.5337	0.4630
Total Impacts	4.4655	4.8392

BIO-2(a) Implement Sensitive Natural Community Avoidance Measures

The following measures should be implemented for all Trail segments:

- To the extent feasible, all Trail construction activities, including access routes, staging areas, stockpile areas, and equipment maintenance are to be located outside of the limits of mapped sensitive habitats. Sensitive habitat areas should be mapped by a qualified biologist and clearly shown on construction plans. Temporary fencing (e.g., silt fencing) should be installed at the outermost edge sensitive habitats and should not be disturbed except as required for Trail construction. Vegetation removal should be limited to the minimum extent necessary to achieve project objectives. Mature trees should be retained wherever feasible and limbing of trees and shrubs in arroyo willow scrub and riparian forest, and coast live oak woodland should be favored in lieu of removal. When possible, during construction stumps and burls of native vegetation should be retained to allow for re-sprouting following project completion.
- Arroyo willow riparian forest impacted by slope stabilization activities should be minimized to the maximum extent feasible. Construction of retaining walls, slope contouring, and other stabilization techniques should be limited to the footprint of the required work area. Silt fencing and other erosion control measures should be placed immediately downslope to prevent sediments and debris from entering stream courses and degrading water quality. Bioengineering techniques (e.g. low crib walls, vegetation planting) should be used as a slope stabilization approach, when feasible.

BIO-2(b) Develop and Implement a Biological Resources Mitigation and Management Plan for Impacts to Biological Resources Resulting from Trail Construction and Operation

A qualified (USFWS- and CDFW-approved) biologist should prepare a project-specific Biological Resources Mitigation and Management Plan (MMP) for each segment individually to compensate for direct and indirect impacts to sensitive habitats, and other sensitive biological resources resulting from Trail construction and operation. The MMP should compensate for permanent loss of sensitive habitats, through the creation, restoration, and enhancement of in-kind sensitive habitat, as close to impacted areas as feasible within the BSA, or on suitable preserve lands on the former Fort Ord.

To protect against the loss of ecological functions and values, compensatory mitigation should re-create the following features of existing sensitive habitat that would be impacted by the proposed project: habitat mosaic, edge habitats, and proximity to wetlands and other waters.

The Biological Resources MMP should include the following:

- Description of the Trail alignment including acreage of temporary and permanent impacts to central dune scrub, central maritime chaparral, coastal and valley freshwater marsh, Riparian woodlands, chamise chaparral, woolly-leaf manzanita, coyote brush scrub, sandmat manzanita chaparral, chamise – black sage chaparral, arroyo willow, and riparian woodlands, including the number and type of trees slated for removal.
- Acreage of temporary and permanent impacts to California tiger salamander upland, and dispersal habitat, smith's blue butterfly habitat, habitat for species of special concern, and listed plant species habitat.
- Ecological functions and values assessment of sensitive habitats, including California tiger salamander habitat to determine suitable mitigation ratios.
- Goals of compensatory mitigation, including types and areas of sensitive habitat to be created, restored, and/or enhanced; number and type of trees to be replaced, specific functions and values of mitigation habitat types, mitigation ratios (created/restored/enhanced: impacted), and performance criteria.
- Such compensatory mitigation to be prioritized to occur as close to impacted areas as feasible and offset impacts of sensitive habitat types, or their functions and values. Consultation with USFWS and/or CDFW, may result in different mitigation areas and ratios.
- Location and acreage of sensitive habitat, including California tiger salamander, smith's blue butterfly and listed plant species habitat, mitigation areas including ownership status, and existing functions and values of restored and/or enhanced sensitive habitats.
- Detailed sensitive habitat creation and/or restoration construction and planting techniques.
- Description and design of habitat requirements for sensitive wildlife known to occur in the BSA and immediate surroundings (including but not limited to: California tiger salamander, smith's blue butterfly, listed plant species, potential roosting bat species, and Monterey dusky-footed woodrat).
- Maintenance activities during the monitoring period including replanting native vegetation found within similar habitats and weed removal that avoid take of California tiger salamander and other sensitive wildlife species.
- Strategies to protect remaining sensitive habitats along the Trail corridor and surroundings from direct and indirect impacts from Trail users such as:

- a. Interpretive signage including specific information about sensitive habitats and species and “leave no trace” content,
- b. Green fencing (dense vegetative buffers consisting of plant species that deter human passage such as poison oak, Pacific blackberry, and stinging nettle) where appropriate, and
- Long-term quantitative and qualitative monitoring and reporting, and documenting the ability to meet or surpass performance criteria.
- Adaptive management strategies to:
 - c. Identify shortcomings in meeting performance standards;
 - d. Ensure long-term viability of existing, enhanced, restored, and/or newly-created sensitive biological resources;
 - e. Enhance ecological functions and values of sensitive habitat mitigation areas, including California tiger salamander habitat, smith’s blue butterfly and listed plant species;
 - f. Interpretive design features associated with the project to protect biological resources.

BIO-2(c) Implement Best Management Practices during Construction

The construction specifications for each Trail segment should include the following BMPs to protect water quality and biological resources during project construction activities.

- Minimize removal or disturbance of existing vegetation outside of the footprint of project construction activities [refer to Mitigation Measures BIO-2(a)].
- Limit site access and parking, equipment storage and stationary construction activities to the designated staging areas to the maximum extent feasible.
- Prior to staging equipment on-site, clean all equipment caked with mud, soils, or debris from off-site sources or previous project sites to avoid introducing or spreading invasive exotic plant species. When feasible, remove invasive exotic plants from the Project area. All equipment used on the premises should be cleaned prior to leaving the site for other projects.
- Position all stationary equipment such as motors, pumps, generators, and/or compressors over drip pans. At the end of each day, move vehicles and equipment as far away as possible from any water body adjacent to the project site in a level staging area. Position parked equipment also over drip pans or absorbent material.
- If security fencing is installed around the construction site, allow for passage of wildlife to maintain a link between inland and coastal habitats including stream corridors during construction activities. Prohibit the use of plastic mesh safety fencing to prevent wildlife entrapment.
- Refuel and perform all vehicle and/or equipment maintenance off-site at a facility approved for such activities.
- To the greatest extent feasible, stabilize all exposed or disturbed areas in the project area. Install erosion control measures as necessary such as silt fences, jute matting, weed-free straw bales, plywood, straw wattles, and water check bars, and broadcasting weed-free straw wherever silt-laden water has the potential to leave the work site and enter the nearby streams. Prohibit the use of monofilament erosion control matting to prevent wildlife entanglement. Modify, repair, and/or replace erosion control measures as needed.

- All nursery plants used in restoration should be inspected for sudden oak death. Vegetation debris should be disposed of properly and vehicles and equipment should be free of soil and vegetation debris before entering natural habitats. Pruning tools should be sanitized.

BIO-2(d) Implement Invasive Weed Prevention and Management Program

For activity that would occur within or adjacent to sensitive habitats, prior to start of construction an Invasive Weed Prevention and Management Program should be developed by a qualified biologist to prevent invasion of native habitat by non-native plant species. A list of target species should be included, along with measures for early detection and eradication. All disturbed areas should be hydroseeded with a mix of locally native species upon completion of work in those areas. In areas where construction is ongoing, hydroseeding should occur where no construction activities have occurred within six (6) weeks since ground disturbing activities ceased. If exotic species invade these areas prior to hydroseeding, weed removal should occur in consultation with a qualified biologist and in accordance with the restoration plan. Landscape species should not include noxious, invasive, and/or non-native plant species that are recognized on the Federal Noxious Weed List, California Noxious Weeds List, and/or California Invasive Plant Council Lists 1, 2, and 4. These requirements should be included in all project plans and specifications.

5.4 Jurisdictional Waters and Wetlands

The proposed project would have a significant effect on biological resources if it would:

- c) *Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means.*

Wetlands and waters are located in the BSA along the Canyon Del Rey/SR 218 segment and may be affected by implementation of the proposed project. Construction of a paved Trail at Laguna Grande will likely require widening of the existing Trail within jurisdictional areas. This section of the alignment falls within the Coastal Zone. Under the California Coastal Act (CCA) and the City of Monterey's Local Coastal Program, coastal wetlands receive protection from degradation or destruction caused by coastal development projects. An optional Trail alignment on the north side of Laguna Grande would be within the City of Seaside's Local Coastal Program. The project corridor along Canyon Del Rey Creek is primarily on previously developed areas (existing Trails, walkways), and no impacts to the creek are expected between Fremont Boulevard and SR 218; however, the project corridor runs through the middle of the emergent wetland between Canyon Del Rey Creek and SR 218 at Work Memorial Park. This wetland is likely to be USACE and CDFW jurisdictional since it is adjacent to Canyon Del Rey Creek. East of SR 218 at the Frog Pond Wetland Preserve, the proposed Trail width would be limited to eight feet, and a stable, permeable surface in lieu of pavement, and the 12 foot wide switchback would be elevated to minimize impacts. This would reduce potential impacts within the Frog Pond Wetland preserve; however, impacts would not be entirely avoided. Direct impacts are expected to include fill (i.e., materials such as soil, gravel, or pavement placed into a wetland feature) resulting from new Trail development and piles for the elevated switchback raised pathway. Direct impacts may also occur if spills or leaks occur during construction. Alteration of the stormwater detention basins (in all segments where detention basins occur in the Northern Marina and CSUMB Loop North segments) would require compliance with the governing municipalities NPDES permits; therefore, impacts to these features would be less than significant. Mitigation Measures BIO-3(a) and BIO-3(b) should be implemented to ensure no net loss

of wetlands and to ensure impacts to jurisdictional features (other than storm detention basins) are less than significant. Impacts are less than significant with mitigation incorporated.

BIO-3(a) Conduct Jurisdictional Delineation for Canyon Del Rey/SR 218 Segment

A qualified biologist should complete a jurisdictional delineation of all features along the Canyon Del Rey/SR 218 segment. The jurisdictional delineation should determine the extent of the jurisdiction for CDFW, USACE, RWQCB, and/or CCC, and should be conducted in accordance with the requirement set forth by each agency. The result should be a preliminary jurisdictional delineation report that should be submitted to the implementing agency, USACE, RWQCB, CCC, and CDFW, as appropriate, for review and approval. Jurisdictional areas should be avoided to the maximum extent possible. If jurisdictional areas are expected to be impacted, then the RWQCB would require a Waste Discharge Requirements (WDRs) permit and/or Section 401 Water Quality Certification (depending upon whether or not the feature falls under federal jurisdiction). If CDFW asserts its jurisdictional authority, then a Streambed Alteration Agreement pursuant to Section 1600 et seq. of the CFGC would also be required prior to construction within the areas of CDFW jurisdiction. If the USACE asserts its authority, then a permit pursuant to Section 404 of the CWA would likely be required.

BIO-3(b) Perform Restoration for Impacts to Waters and Wetlands

Impacts to waters and wetlands should be mitigated through one or more options to meet the required amount of mitigation as required based on direct impacts from project development under the mitigation ratios outlined below. Mitigation for impacts to waters and wetlands can be achieved through the acquisition and in-perpetuity management of similar habitat or through the in-lieu funding of such through an existing mitigation bank. If the RCIS is adopted at the time of project implementation, mitigation may be facilitated through the RCIS program. Funding and management of internal mitigation areas can be managed internally. Funding and management of off-site mitigation lands should be provided through purchase of credits from an existing, approved mitigation bank or land purchased by implementing entity and placed into a conservation easement or other covenant restricting development (e.g., deed restriction). Internal mitigation lands, or in lieu funding sufficient to acquire lands should provide habitat at a 1:1 ratio for impacted lands, comparable to habitat to be impacted by individual project activity. Compensatory mitigation for sensitive vegetation communities can be combined with other compensatory mitigation (e.g., sensitive vegetation communities) as applicable.

RESTORATION AND MONITORING

If waters and/or wetlands cannot be avoided and will be impacted by construction of the Trail, a compensatory mitigation program should be implemented in accordance with Mitigation Measure BIO-1(c) and the measures set forth by the regulatory agencies during the permitting process. All temporary impacts to waters and wetlands should be fully restored to natural condition.

BIO-3(c) General Avoidance and Minimization

Potential jurisdictional features identified in jurisdictional delineation reports should be avoided. Identified jurisdictional features should be documented in a report detailing how all identified jurisdictional features should be avoided.

- Any material/spoils generated from project activities should be located away from jurisdictional areas or special-status habitat and protected from storm water run-off using temporary

perimeter sediment barriers such as berms, silt fences, fiber rolls (non- monofilament), covers, sand/gravel bags, and straw bale barriers, as appropriate.

- Materials should be stored on impervious surfaces or plastic ground covers to prevent any spills or leakage from contaminating the ground and generally at least 50 feet from the top of bank (Canyon Del Rey/SR 218 segment).
- Any spillage of material should be stopped if it can be done safely. The contaminated area will be cleaned and any contaminated materials properly disposed. For all spills, the project foreman or designated environmental representative will be notified.

5.5 Wildlife Movement

The proposed project would have a significant effect on biological resources if it would:

- d) *Interfere substantially with the movement of any resident or migratory fish or wildlife species or with established resident or migratory wildlife corridors, or impede the use of wildlife nursery sites.*

The Northern Loop, National Monument Loop, Ryan Ranch, and Canyon Del Rey/SR 218 segments within the BSA contain a natural landscape block and linkage connecting the former Fort Ord with undeveloped lands to the south, in the northern extent to the Carmel Valley and the Santa Lucia Mountain Range along the coastline. A key habitat linkage also occurs adjacent to the Northern Loop segment along the Salinas River Riparian Corridor.

The development of a paved Trail within or near developed areas is not likely to significantly disrupt the movement of large mammals and birds because it would not present a substantial geographic barrier. In addition, the location of the Trail would not disrupt a critical wildlife movement corridor, as described in Section 4.4, *Wildlife Movement*. Additional reasons why impacts to wildlife movement would not be significant include:

1. Wildlife can cross a Trail with relative ease, and the level and speed of Trail use is not a substantial overall deterrent to wildlife moving across the proposed Trail.
2. The Northern Loop and Northern Marina segments are above the riparian corridor of the Salinas River and would not interfere with movement within this corridor.
3. The Trail does not represent a significant physical barrier to wildlife movement.
4. Trail usage and speeds would not be expected to deter overall wildlife movement across the Trail.
5. The Trail is not located between two or more critical habitat areas or within a linkage connecting two or more critical habitat areas.

For these reasons, Trail development is not expected to result in significant changes to the genetic connectivity among local populations of wildlife, or within a broader regional context, and is not expected to prevent local wildlife movement. Impacts would be less than significant.

Creation of undercrossings at General Jim Moore Boulevard and Reservation Road may create connectivity between open spaces at the Frog Pond and undeveloped areas to the north and south of Reservation Road, respectively; a potentially beneficial impact of the project.

5.6 Local Policies and Ordinances

The proposed project would have a significant effect on biological resources if it would:

- e) *Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance*

Areas of the BSA fall within the jurisdiction of Monterey County, City of Monterey, City of Del Rey Oaks, City of Seaside and City of Marina. Portions of the project corridor are within or adjacent to areas managed by CSUMB, the Fort Ord Reuse Authority (FORA), the Army, the California Department of Transportation (Caltrans), the University of California Santa Cruz, Pacific Gas & Electric (PG&E), and the Monterey Peninsula Regional Park District. Some of these governing agencies provide protection for biological resources through the implementation of general plans, municipal codes, master plans, and local coastal programs

The Monterey County General Plan includes a Conservation and Open Space Element for the long-term preservation of open space and natural resources. Goal OS-1.10 recognizes the value of Trails, and promotes the creation of new Trails on public lands. Goals OS-5.1 through OS-5.25 address the conservation of listed species, critical habitats, and the avoidance of significant impacts to biological resources. These goals require compliance with the FESA and CESA and consultation with USFWS and CDFW if listed species or critical habitats will be affected by new development. The County also requires that migratory bird nests be protected during the nesting season (February 1 to September 15), including preconstruction surveys and non-disturbance buffers. Policy CVS-5.1 prohibits development from encroaching on the main channels of the Salinas River and Policy CVS-5.2 requires that new recreational uses avoid encroaching on the main channel of the Salinas River in order to preserve riparian habitats. The County's municipal code provides for the preservation of oaks and other protected trees such as landmark trees (Section 21.64.260). Development of the proposed project on County lands would require permitting and compliance with the County General Plan and municipal code for areas under its jurisdiction.

The City of Monterey General Plan goals and policies designed to direct conservation, development, and utilization of natural resources. Goal d, *Flora and Fauna and Marine Resources*, aims to "protect the character and composition of existing native vegetative communities. Conserve, manage, and restore habitats for endangered species, and protect biological diversity represented by special status plant and wildlife species." This is supported by policies such as Policy d.5, which states "reduce biotic impacts to a less-than-significant level on project sites by ensuring that mitigation measures identified in biotic reports are incorporated as conditions of approval for development projects.

The City of Seaside's 2004 General Plan Conservation and Open Space Element includes a policy (COS-4.3) to encourage the preservation of oak woodlands. The implementation plan (COS-4.3.1) for this policy requires project developers to "retain coast live oak trees within the planning area, including oaks within new development areas." Trail development may impact individual trees, but would not result in a significant impact to oak woodland, and thus would not be in conflict with the City of Seaside's 2004 General Plan.

The Draft Seaside 2040 General Plan includes a policy for the development of an ordinance specifically for the preservation of oak trees; however, this ordinance has not yet been developed.

Additionally, the Draft 2040 General Plan requires consistency with the Fort Ord BRP. The BRP Conservation Element contains policies and programs developed for each recipient of former Fort

Ord lands. Programs specific to the City of Seaside require that the City will encourage project applicants to incorporate small pockets of habitat containing HMP species where feasible. Programs specific to the preservation of oak woodlands include:

- The City shall adopt an ordinance to address the preservation of oak trees. This ordinance shall include restrictions on the removal of oak trees of a certain size, tree permit requirements, and requirements for relocation or replacement of oaks removed (C-2.1).
- The City shall require project applicants to submit project plans showing: 1) the location of all existing trees (including: species, health, age and diameter), 2) which trees will be removed and which trees will remain, which will be removed, and which will be relocated, and 3) the location, size, and species of replacement trees (C-2.4).
- The City shall require the use of oaks and other native plant species for landscaping, and recommend collection and propagation of acorns and other plant material from former Fort Ord oak woodlands to be used for restoration and landscaping (C-2.4).
- The City shall require standards for plantings under oak trees; plantings within the dripline of mature trees must be at least five feet from the trunk, and plantings under and around oaks should be comprised of species approved by the California Oak Foundation (C-2.5).
- The City shall require that paving within the dripline of preserved oak trees be avoided wherever possible, and where unavoidable, permeable paving should be used and root zone excavation should be avoided (C-2.6).

The City of Marina General Plan includes policies to provide “Habitat Reserves and Other Open Space for the protection of important habitat areas, scenic areas, and other areas of natural open space.” Under the General Plan areas designated as “Habitat Reserve and Other Open Space” will be permanently maintained to “protect significant plants and wildlife inhabiting these areas.” These areas include:

- Riparian habitats and vegetation along the Salinas River
- Coastal Strand and Dunes
- 1,160 acres of maritime chaparral, coastal scrub, and coast live oak woodland designated for protection within the University of California Natural Reserve System, a 124 acre reserve site and adjacent land on Armstrong Ranch, 160 acres within the East Garrison Reserve, a 227 acre reserve south of Imjin Road, and a 50 acre reserve located along the east side of Highway 1 near the planned extension of Del Monte Boulevard.
- Wetlands, including habitat at the Armstrong Ranch to preserve vernal pools. The GP also requires a biological field survey to determine if additional vernal ponds exist prior to development on the Armstrong Ranch. If vernal pools are present, development must preserve vernal pools or provide either for the replacement of habitat. Several ponds in the developed areas of the City are also protected as open space.

The City of Del Rey Oaks General Plan contains goals and policies to provide a framework for the growth and development of the City while protecting the City’s natural resources, such as Canyon Del Rey Creek and the Frog Pond Wetland Preserve. Specific policies include but are not limited to: the preservation of wildlife corridors, the protection of the Canyon Del Rey drainage and water quality, and the protection of habit on former Fort Ord lands.

The Cities of Monterey, Del Rey Oaks, Seaside, and Marina municipal codes also include tree removal permits and replacement requirements. Removal of trees under the proposed project

would require approval and permitting from the applicable governing agency. Pursuant to issuance of permits, the project would not conflict with any local policy or ordinance. This impact would be less than significant.

Under CSUMB's current Master Plan includes a development framework to maintain the natural habitats and habitat connections on campus. The Draft 2017 Master Plan includes policies to protect and enhance the natural environment as well as preserve and protect native habitats and trees. This policy requires that development avoid or minimize impacts to native habitats, mature trees, special status species. The Policy for Goal OS 1.6 also requires two replacement trees for every one tree that dies, is damaged, or is removed from the campus. The Policy for Goal OS 1.12 requires the protection of open space at the Southern Oak Woodlands and East Campus Open Space, but allows for minimally intrusive Trail development. The Policy for Goal OS 1.15 includes continued participation in development and implementation of the Fort Ord HCP as well as the Monterey County Oak Woodland Stewardship Guidelines. The Draft CSUMB master plan also incorporates the FORTAG alignment in the mobility section (Section 7).

Trees to be removed have not yet been identified because the alignment has not yet been finalized; however, the development of Trails will potentially require some tree removal. The most likely locations for tree removal would be in the riparian areas along the Salinas River in the Northern Loop Trail segment, in riparian areas in the Del Ray Oaks/SR 218 segment, and in oak woodland areas west of General Jim Moore Boulevard and in the CSUMB North and South Trail segments. Additionally, some loss of habitat and biological resources is expected. Development of Trails under the proposed project would be required to comply with these goals policies and measures, including via the application for tree removal permits and compliance with associated requirement (e.g., tree replacement) where applicable. Pursuant to compliance with these regulations, impacts would be less than significant.

5.7 Adopted or Approved Conservation Plans

The proposed project would have a significant effect on biological resources if it would:

- f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Conservation Community Plan, or other approved local, regional, or state habitat conservation plan.*

The project does not occur within the plan area for an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan. However, the Fort Ord HCP is in a draft form, and could potentially be adopted prior to, or after various segments of the project are developed. The HCP would only be applicable to FORA lands. Until the Fort Ord HCP has been finalized, the Fort Ord HMP is the accepted governing document, along with the subsequent BOs as applicable. The HMP identifies habitat management requirements for the disposal and reuse of former Fort Ord lands. Parcels covered under the HMP within the BSA are:

- Designated for Development
- Designated for Development with Reserve or Restrictions
- Designated as a Habitat Reserve
- Designated as a Habitat Corridor

Parcels designated for development under the HMP have no management restrictions under the HMP; therefore, no conflict is expected from the development of Trails on these parcels.

Parcels designated for development with reserve or restrictions in the Northern Marina segment include the North Fritzsche Habitat Reserve near the Marina Municipal Airport, within the Northern Loop segment. Development on the parcel is restricted to airport support facilities (utilities, etc.) and a six-lane road. The proposed alignment on this parcel crosses grassland and scrub habitats. Alignment options in this segment follow an existing dirt access road. Monterey spineflower was observed elsewhere on the reserve along the edges of access roads (see Appendix C), and the species may occur along road margins in Northern Marina segment but are unlikely to occur in grassland and scrub habitat with no open sandy areas along the options. Paving of this section of road on Northern Marina segment would likely reduce spineflower habitat and may result in take of a listed species.

The landfill parcel designated under the HMP for “development with reserve or restrictions,” overlapping the Northern Loop and CSUMB Loop North segments, allows for development of 81 acres. This development was unspecified and therefore there would be no conflict with the HMP if the paved Trail were less than 81 acres of the parcel.

The restriction on the parcel designated for development with reserve or restrictions east of the Frog Pond require that no stormwater runoff from development of the parcel be allowed to enter the Habitat Reserve Parcel adjacent to the Frog Pond. Additionally, development of the proposed trail would be required to comply with the development restrictions identified in the 2005 USFWS MOA for development on the Del Rey Oaks parcels (borderland parcels surrounding the Habitat Reserve Parcel. Development of FORTAG would not conflict with this requirement if it were designed to channel runoff away from the upper reaches of the tributary.

Development within parcels designated as habitat reserves is not allowed under the HMP. The goals of the HMP are to manage these lands for conservation and enhancement of habitat for threatened and endangered species. Within the BSA parcels designated as habitat reserves include the Monterey Peninsula Regional Parks Natural Area Expansion parcel on the west side of General Jim Moore Boulevard and the Frog Pond Natural Reserve, the Salinas River Habitat Management Area east of the Northern Loop segment, and the University of California Natural Reserve System Fort Ord Natural Reserve on the Northern Marina segment east of Tallmon Street. The project corridor would directly cross these parcels.

One other parcel designated as habitat reserve within the BSA is the eastern side of the National Monument Loop segment, where our survey buffer captures the edge of the NRMA. No Trail segments are proposed on this parcel; therefore, no conflict would occur.

The parcel designated as a habitat corridor occurs in the BSA on the south side of Inter-Garrison Road west of the Jerry Smith Trail. The Northern Loop segment runs across the northern end of this parcel, approximately parallel with Inter-Garrison Road. Under the HMP some development will be allowed on this parcel for recreational use, including Trails. Therefore, no conflicts are expected.

Much of the BSA along the National Monument Loop segment falls within parcels designated as Borderland Development Areas Along the NRMA Interface, requiring best management practices to ensure no effects to NRMA.

Until the HCP is adopted, consultation with USFWS and CDFW is required on a project by project basis. The HCP would supersede the HMP, and although it is not out for public review, the HCP includes FORTAG as a “covered activity.” Therefore, no conflict with an adopted HCP or NCCP would occur. Impacts would be less than significant.

6 Limitations, Assumptions, and Use Reliance

This Biological Resources Assessment has been performed in accordance with professionally accepted biological investigation practices conducted at this time and in this geographic area. The biological investigation is limited by the scope of work performed. Reconnaissance biological surveys for certain taxa may have been conducted as part of this assessment but were not performed during a particular blooming period, nesting period, or particular portion of the season when positive identification would be expected if present, and therefore, cannot be considered definitive. The biological surveys are limited also by the environmental conditions present at the time of the surveys. In addition, general biological (or protocol) surveys do not guarantee that the organisms are not present and will not be discovered in the future within the site. In particular, mobile wildlife species could occupy the site on a transient basis, or re-establish populations in the future. Our field studies were based on current industry practices, which change over time and may not be applicable in the future. No other guarantees or warranties, expressed or implied, are provided. The findings and opinions conveyed in this report are based on findings derived from site reconnaissance, jurisdictional areas, review of CNDDDB RareFind5, and specified historical and literature sources. Standard data sources relied upon during the completion of this report, such as the CNDDDB, may vary with regard to accuracy and completeness. In particular, the CNDDDB is compiled from research and observations reported to CDFW that may or may not have been the result of comprehensive or site-specific field surveys. Although Rincon believes the data sources are reasonably reliable, Rincon cannot and does not guarantee the authenticity or reliability of the data sources it has used. Additionally, pursuant to our contract, the data sources reviewed included only those that are practically reviewable without the need for extraordinary research and analysis.

Regulatory Setting

Regulatory Setting

Special-status habitats are vegetation types, associations, or sub-associations that support concentrations of special-status plant or animal species, are of relatively limited distribution, or are of particular value to wildlife.

Listed species are those taxa that are formally listed as endangered or threatened by the federal government (e.g., U.S. Fish and Wildlife Service [USFWS]), pursuant to the FESA or as endangered, threatened, or rare (for plants only) by the State of California (i.e., California Fish and Game Commission), pursuant to the California Endangered Species Act or the California Native Plant Protection Act. Some species are considered rare (but not formally listed) by resource agencies, organizations with biological interests/expertise (e.g., Audubon Society, CNPS, The Wildlife Society), and the scientific community.

The following is a brief summary of the regulatory context under which biological resources are managed at the federal, state, and local levels. A number of federal and state statutes provide a regulatory structure that guides the protection of biological resources. Agencies with the responsibility for protection of biological resources within the project site include:

- U.S. Army Corps of Engineers (wetlands and other waters of the United States);
- Central Coast Regional Water Quality Control Board (waters of the State);
- U.S. Fish and Wildlife Service (federally listed species and migratory birds);
- California Department Fish and Wildlife (riparian areas, streambeds, and lakes; state-listed species; Species of Special Concern; nesting birds);
- The California Coastal Commission
- The County of Monterey
- The City of Monterey
- The City of Del Rey Oaks
- The City of Seaside
- The City of Marina
- California State University Monterey Bay

U.S. Army Corps of Engineers

Under Section 404 of the Clean Water Act, the U.S. Army Corps of Engineers (USACE) has authority to regulate activities that could discharge fill of material into wetlands or other “waters of the United States.” Perennial and intermittent creeks are considered waters of the United States if they are hydrologically connected to other jurisdictional waters (typically a navigable water). The USACE also implements the federal policy embodied in Executive Order 11990, which is intended to result in no net loss of wetland value or acres. In achieving the goals of the Clean Water Act, the USACE seeks to avoid adverse impacts and offset unavoidable adverse impacts on existing aquatic resources. Any fill of wetlands that are hydrologically connected to jurisdictional waters would require a permit from the USACE prior to the start of work. Typically, when a project involves impacts to waters of the United States, the goal of no net loss of wetland acres or values is met

through avoidance and minimization to the extent practicable, followed by compensatory mitigation involving creation or enhancement of similar habitats.

Regional Water Quality Control Board

The State Water Resources Control Board (SWRCB) and the local Regional Water Quality Control Board (RWQCB) have jurisdiction over “waters of the State,” pursuant to the Porter-Cologne Water Quality Control Act, which are defined as any surface water or groundwater, including saline waters, within the boundaries of the State. The SWRCB has issued general Waste Discharge Requirements (WDRs) regarding discharges to “isolated” waters of the State (Water Quality Order No. 2004-0004-DWQ, Statewide General Waste Discharge Requirements for Dredged or Fill Discharges to Waters Deemed by the U.S. Army Corps of Engineers to be Outside of Federal Jurisdiction). The RWQCB administers actions under this general order for isolated waters not subject to federal jurisdiction, and is also responsible for the issuance of water quality certifications pursuant to Section 401 of the Clean Water Act for waters subject to federal jurisdiction.

United States Fish and Wildlife Service

The USFWS implements the Migratory Bird Treaty Act (16 United States Code [USC] Section 703-711) and the Bald and Golden Eagle Protection Act (16 USC Section 668). The USFWS and National Marine Fisheries Service (NMFS) share responsibility for implementing the Federal Endangered Species Act (FESA) (16 USC § 153 et seq.). Generally, the USFWS implements the FESA for terrestrial and freshwater species, while the NMFS implements the FESA for marine and anadromous species. Projects that would result in “take” of any federally threatened or endangered species are required to obtain permits from the USFWS or NMFS through either Section 7 (interagency consultation with a federal nexus) or Section 10 (Habitat Conservation Plan) of the FESA, depending on the involvement by the federal government in permitting and/or funding of the project. The permitting process is used to determine if a project would jeopardize the continued existence of a listed species and what measures would be required to avoid jeopardizing the species. “Take” under federal definition means to harass, harm (which includes habitat modification), pursue, hunt, shoot, wound, kill, trap, capture, or collect, or to attempt to engage in any such conduct. Proposed or candidate species do not have the full protection of the FESA; however, the USFWS and NMFS advise project applicants that they could be elevated to listed status at any time.

California Department of Fish and Wildlife

The California Department of Fish and Wildlife (CDFW) derives its authority from the Fish and Game Code of California. The California Endangered Species Act (CESA) (Fish and Game Code Section 2050 et. seq.) prohibits take of state listed threatened or endangered. Take under CESA is restricted to direct mortality of a listed species and the law does not prohibit indirect harm by way of habitat modification. Where incidental take would occur during construction or other lawful activities, CESA allows the CDFW to issue an Incidental Take Permit upon finding, among other requirements, that impacts to the species have been minimized and fully mitigated.

The CDFW also enforces Sections 3511, 4700, 5050, and 5515 of the Fish and Game Code, which prohibits take of species designated as Fully Protected. The CDFW is not allowed to issue an Incidental Take Permit for Fully Protected species; therefore, impacts to these species must be avoided.

California Fish and Game Code sections 3503, 3503.5, and 3513 describe unlawful take, possession, or destruction of native birds, nests, and eggs. Section 3503.5 of the Code protects all birds-of-prey

and their eggs and nests against take, possession, or destruction of nests or eggs. Section 3513 makes it a state-level offense to take any bird in violation of the federal Migratory Bird Treaty Act. CDFW administers these requirements.

Species of Special Concern (SSC) is a category used by the CDFW for those species which are considered to be indicators of regional habitat changes or are considered to be potential future protected species. Species of Special Concern do not have any special legal status except that which may be afforded by the Fish and Game Code as noted above. The SSC category is intended by the CDFW for use as a management tool to include these species in special consideration when decisions are made concerning the development of natural lands. The CDFW also has authority to administer the Native Plant Protection Act (NPPA) (Fish and Game Code Section 1900 et seq.). The NPPA requires the CDFW to establish criteria for determining if a species, subspecies, or variety of native plant is endangered or rare. Effective in 2015, CDFW promulgated regulations (14 CCR 786.9) under the authority of the NPPA, establishing that the CESA's permitting procedures would be applied to plants listed under the NPPA as "Rare." With this change, there is little practical difference for the regulated public between plants listed under CESA and those listed under the NPPA.

Perennial, intermittent, and ephemeral streams and associated riparian vegetation, when present, also fall under the jurisdiction of the CDFW. Section 1600 *et seq.* of the Fish and Game Code (Lake and Streambed Alteration Agreements) gives the CDFW regulatory authority over activities that divert, obstruct, or alter the channel, bed, or bank of any river, stream or lake.

1997 Fort Ord Reuse Authority (FORA) Base Reuse Plan

The Fort Ord Reuse Authority (FORA) adopted the *Fort Ord Base Reuse Plan* (BRP) in June 1997, and a revised version of the BRP was published in digital format in September 2001, incorporating various corrections and errata. The main objectives related to biological resources that are outlined in the BRP for the City of Seaside are: to preserve and protect the sensitive species and habitats addressed in the HMP; preserve and protect the sensitive species and habitats that are not addressed in the HMP; avoid or minimize disturbance to natural land features and habitats through project design; promote awareness and education concerning the biological resources on the former Fort Ord; and develop strategies for interim management of undeveloped natural land areas.

Conservation goals, policies, and programs are defined in the BRP to accomplish these objectives. Some of the main policies outlined for the City of Seaside are as follows. Policy A-4 requires the City to encourage the preservation of small pockets of habitat and populations of HMP species within and around developed areas. Policy B-1 requires that the City strive to avoid or minimize loss of any sensitive species occurring in areas planned for development. Policy B-3 requires the City to preserve, enhance and protect wetland areas. Policy C-2 requires the City to encourage the preservation and enhancement of oak woodland elements in the natural and built environments. Policy D-2 requires the City to encourage and participate in the preparation of educational materials through various media sources which describe the biological resources on the former Fort Ord. Policy E-1 requires that the City develop a plan describing how it intends to address the interim management of natural land areas for which the City is designated as the responsible party.

Fort Ord Habitat Management Plan and Habitat Conservation Plan

The Fort Ord Habitat Management Plan (HMP) was published by the USACE in 1997 in compliance with the USFWS final Biological Opinion for disposal and reuse of former Fort Ord lands. The HMP establishes guidelines for the conservation and management of plant and wildlife species and their

habitat that occur on former Fort Ord lands. The HMP promotes preservation, enhancement, and restoration of habitat and populations of HMP covered species while allowing development on selected properties that promotes economic recovery after closure of the fort.

The Fort Ord Habitat Conservation Plan (HCP) is currently being prepared by the Fort Ord Reuse Authority and is independent of the Fort Ord HMP. The HCP provides the framework for ensuring conservation of State and federally listed plant and animal species (HCP species) and the natural communities that support them on former Fort Ord. The HCP incorporates all relevant information from the HMP, and would supersede it as the primary conservation planning document for listed species and non-federal recipients of Fort Ord lands; however, the HCP has not yet been adopted. To date, USFWS has generally accepted adherence to the HMP conditions as sufficient to avoid and mitigate impacts to federally listed plant species within designated development areas of the FORA. CDFW has generally accepted adherence to the HMP conditions as sufficient to avoid and mitigate impacts to non-listed sensitive species within designated development areas of the FORA. However, these are project-specific determinations, and impacts to federally or state listed wildlife generally requires individual take authorization from one or both agencies.

Local Jurisdiction

2010 Monterey County General Plan

The conservation and Open Space Element of the County General Plan contains Goal OS-5, which aims to “conserve listed species, critical habitat, habitat and species protected in area plans; avoid, minimize and mitigate significant impacts to biological resources.” This is supported by policies such as Policy OS-5.3 which states “development shall be carefully planned to provide for the conservation and maintenance of critical habitat.” Additionally, Policy OS-5.4 states that “development shall avoid, minimize, and mitigate impacts to listed species and critical habitat to the extent feasible.” Policy CVS-5.1 prohibits development from encroaching on the main channels of the Salinas River and Policy CVS-5.2 requires that new recreational uses avoid encroaching on the main channel of the Salinas River in order to preserve riparian habitats.

Monterey County Municipal Code

Section 21.64.260 of Monterey County’s municipal code provides for the preservation of oaks and other protected trees. This code requires a permit from the County for the removal of trees in unincorporated areas designated as resource conservation, residential, commercial or industrial. It also prohibits the removal of landmark trees, unless approved by the Director of Planning.

City of Marina General Plan

The City of Marina General Plan (GP) includes policies to provide “Habitat Reserves and Other Open Space for the protection of important habitat areas, scenic areas, and other areas of natural open space.” Under the GP areas designated as “Habitat Reserve and Other Open Space” will be permanently maintained to “protect significant plants and wildlife inhabiting these areas.” These areas include:

1. Riparian habitats and vegetation along the Salinas River,
2. Coastal Strand and Dunes,
3. 1,160 acres of maritime chaparral, coastal scrub, and coast live oak woodland designated for protection within the University of California Natural Reserve System, a 124 acre reserve

site and adjacent land on Armstrong Ranch, 160 acres within the East Garrison Reserve, a 227 acre reserve south of Imjin Road, and a 50 acre reserve located along the east side of Highway 1 near the planned extension of Del Monte Boulevard.

4. Wetlands, including habitat at the Armstrong Ranch to preserve vernal pools. The GP also requires a biological field survey to determine if additional vernal ponds exist prior to development on the Armstrong Ranch. If vernal pools are present, development must preserve vernal pools or provide either for the replacement of habitat. Several ponds in the developed areas of the City are also protected as open space.

City of Marina Municipal Code

The City of Marina Municipal Code Chapter 17.51 (Tree Removal, Preservation and Protection) requires a tree removal permit for the removal of any tree within the city with a single stem six inches or more in diameter at breast height (DBH), or a multistemmed plant having an aggregate diameter of ten inches or more DBH, and any living woody plant which was planted as part of an approved compensation plan or landscaping plan. Conditions imposed on the removal may include, but would not be limited to, one or more of the following:

- 1) Preparation of a tree removal and protection plan, including tree protection guidelines.
- 2) A compensation plan requiring the replacement or placement of additional trees on the property and/or the payment to the city to fund the purchase, planting, and maintenance of off-site replacement trees.
- 3) Preparation of a site restoration plan requiring restoration of ground surface area in the vicinity of tree removals.

Additionally, Section 17.51.070 provides for the protection of Landmark trees and landmark tree stands. Landmark trees and landmark tree stands are defined by the City as;

- 1) Prominently visible from public streets, public parking areas, parks or open space, from a minimum distance of one hundred feet;
- 2) Indicate at least a seventy percent chance of surviving more than ten years, and be able to be maintained without excessive threat to the public health, safety and welfare.

Landmark trees and landmark tree stands must also meet one of the following criteria:

- 1) Possesses special beauty, or horticultural or historic interest;
- 2) Is of such substantial size or prominence that it has significant visibility from city streets, parks or open space;
- 3) Is of such substantial size that it makes a significant contribution to the forested skyline of the city;
- 4) Is a rare or unusual species for this area;
- 5) Is a particularly outstanding representative of the species.

Applications for the removal of landmark trees and landmark tree stands must be reviewed and approved by the City Planning Commission and tree committee

2004 Seaside General Plan

The Conservation/Open Space Element of the Seaside 2004 General Plan includes policies addressing protection of sensitive biological resources. The Goal of COS-4 is to “preserve and protect the sensitive habitats and species within the community.” Policy COS-4.1 is to “Preserve ecological and biological resources by maintaining these resources as open space.” Implementation Plan COS-4.1.1 is to “Require Proper Analysis and Mitigation of Biological Resources. Use proper land use planning and environmental review to minimize the impact of urban development on sensitive ecological and biological resources. Where feasible, require open space easements and/or buffers to avoid impacts to sensitive biological resources. Where on-site preservation is not feasible, require habitat replacement at locations and ratios acceptable to the State and Federal agencies with jurisdiction over the project.”

Policy COS-4.2 is to “Protect and enhance the creeks, lakes, and adjacent wetlands for their value in providing visual amenity, habitat for wildlife, and recreational opportunities.”

Policy COS-4.3 is to “Encourage the preservation and enhancement of oak woodland elements in the natural and built environments.” Implementation Plan COS-4.3.1 requires “project developers to retain coast live oak trees within the planning area, including oaks within new development areas. All coast live oak trees should be surveyed prior to construction to determine if any raptor nests are present and active. If active nests are observed, the construction should be postponed until the end of the fledgling.”

Draft Seaside 2040

The goals, policies, and implementation actions of *Draft Seaside 2040* support growth and redevelopment, which includes areas within the jurisdiction of the City’s LCP; as well as on undeveloped former Fort Ord lands. New development under *Draft Seaside 2040* on former Fort Ord lands would incorporate open space corridors with Trails that support natural vegetation communities, and sensitive habitats.

Draft Seaside 2040 includes “Goal POC-8: Sensitive species and habitat protected on former Fort Ord lands. The Fort Ord HMP and HCP provide frameworks to conserve and manage special status species, animal communities, and habitat areas on former Fort Ord lands. This goal aims to implement those plans locally, identifying and managing habitat areas and species.” *Draft Seaside 2040* includes “Goal POC-9: New development supports the preservation or enhancement of the City’s natural resources.” One of the implementing Policies for POC-9 states “Clustered development. Cluster new development on former Fort Ord lands to minimize impacts to oak woodlands and linkages, preserve habitat management areas, and protect steep slopes, wetlands, and waterways.” Other implementing policies for POC-9 state “Integrating oak woodland. Work with developers to promote an understanding of existing oak trees and previously-identified oak woodland linkages as they design new developments.”

Seaside Municipal Code

The City of Seaside Municipal Code Title 8 Health and Safety, Chapter 8.54 Trees provides standards for the removal, protection and preservation of trees. The ordinance requires a tree removal permit and replacement plantings for any tree to be removed during project construction. In addition to requiring tree removal permits, the ordinance also requires measures to protect existing trees during project construction.

2005 City of Monterey General Plan

The Conservation Element of the City General Plan contains Goal d, which aims to “protect the character and composition of existing native vegetative communities. Conserve, manage, and restore habitats for endangered species, and protect biological diversity represented by special status plant and wildlife species.” This is supported by policies such as Policy d.5, which states “reduce biotic impacts to a less-than-significant level on project sites by ensuring that mitigation measures identified in biotic reports are incorporated as conditions of approval for development projects. Compliance with the City Tree Ordinance is the mechanism that will be used to address impacts of tree removals. As mitigation for significant impacts, avoidance, replacement, restoration of habitats on- or off-site, or other measures may be required.”

City of Monterey Municipal Code

The City of Monterey Municipal Code Chapter 37, *Preservation of Trees and Shrubs*, requires a permit issued by the City prior to removal of “protected trees” (§ 37-8). Protected trees are defined as “a) trees located on a vacant private parcel that are more than two inches (2”) in diameter when measured at a point four feet six inches (4’6”) above the tree’s natural grade; and, b) trees located on a private, developed parcel that are more than six inches (6”) when measured at a point four feet six inches (4’6”) above the tree’s natural grade.” Additionally, a “local landmark tree” is defined as an outstanding, healthy, and prominent tree that is designated landmark in accordance with the procedures established in the ordinance. To be eligible for consideration as a local landmark tree, trees must meet the following minimum criteria:

1. Oak trees
 - a) Ten inch (10”) trunk diameter measured at a point four feet, six inches (4’6”) above natural grade
 - b) Twenty feet (20’) in height measured from natural grade to the top of the canopy
 - c) Prominently visible from public streets, public parking areas, parks or open space, from a minimum distance of one hundred feet (100’)
- 2) Conifers
 - a) Twelve inch (12”) trunk diameter measured at a point four feet, six inches (4’6”) above natural grade
 - b) Thirty feet (30’) in height measured from natural grade to the top of the canopy
 - c) Prominently visible from public streets, public parking areas, parks or open space, from a minimum distance of one hundred feet (100’)
- 3) Non-native ornamental
 - a) Ten inch (10”) trunk diameter measured at a point four feet, six inches (4’6”) above natural grade

According to Section 37-10, tree removal permits are required to be approved before a protected tree may be removed. The City Forester shall review and approve removals that are based on tree health and/or safety considerations. According to Section 37-11, if it is determined after inspection of the property by the City Forester, that the adverse effects of tree removal can be mitigated, conditions may be imposed on the removal. Additionally, according to Section 37-12, local landmark trees may be removed in situations where the tree is determined to be unhealthy, present a safety hazard, or prevents reasonable development of permitted uses on the property.

1997 City of Del Rey Oaks General Plan

The City of Del Rey Oaks General Plan contains goals and policies to provide a framework for the growth and development of the City while protecting the City's natural resources, such as Canyon Del Rey Creek and the Frog Pond Wetland Preserve. Specific policies include but are not limited to; the preservation of wildlife corridors, the protection of the Canyon Del Rey drainage and water quality, and the protection of habitat on former Fort Ord Lands.

Del Rey Oaks Municipal Code

The City of Del Rey Oaks Municipal Code Title 12, Chapter 12.16 Street Trees and Shrubs, provides protection for oak trees and other significant trees. Under this code a permit is required to cut or remove "any tree of the *quercus* genus more than 30 inches in circumference as measured two feet about the root crown or, in the case of an oak with more than one trunk, any such tree with a circumference of any two trunks of at least 40 inches as measured two feet above the root crown" , or a significant tree, defined as "a woody perennial plant which usually, but not necessarily, has a single trunk, and which has a height of 30 feet or more, or has a circumference of 36 inches or more at 24 inches above the ground".

Current 2007 California State University Master Plan

The Current CSUMB master plan includes a section on Habitat Integration under Chapter 5. Development Framework, which prioritizes maintain the natural habitats and habitat connections on campus.

Draft 2017 California State University Master Plan

The Draft CSUMB master plan includes policies to protect and enhance the natural environment as well as preserve and protect native habitats and trees. This policy requires that development avoid or minimize impacts to native habitats, mature trees, special status species. The Policy for Goal OS 1.6 also requires two replacement trees for every one tree that dies, is damaged, or is removed from the campus. The Policy for Goal OS 1.12 requires the protection of open space at the Southern Oak Woodlands and East Campus Open Space, but allows for minimally intrusive Trail development. The Policy for Goal OS 1.15 includes continued participation in development and implementation of the Fort Ord HCP as well as the Monterey County Oak Woodland Stewardship Guidelines.

The Draft CSUMB master plan also incorporates FORTAG alignment in the mobility section (Section 7).

Floral and Faunal Compendium

Plant Species Observed Within the Study Area

Scientific Name	Common Name	Status	Native or Introduced
Trees			
<i>Washingtonia robusta</i>	Mexican fan palm	None	Introduced Cal-IPC Moderate
<i>Alnus rhombifolia</i>	white alder	None	Native
<i>Hesperocyparis macrocarpa</i>	Monterey cypress	None	Native
<i>Sequoia sempervirens</i>	coast redwood	None	Native
<i>Acacia dealbata</i>	Silver wattle	None	Introduced Cal-IPC Moderate
<i>Acacia longifolia</i>	sydney golden wattle	None	Planted
<i>Acacia melanoxylon</i>	blackwood acacia	None	Introduced Cal-IPC Limited
<i>Quercus agrifolia</i> var. <i>agrifolia</i>	Coast live oak	None	Native
<i>Eucalyptus globulus</i>	blue gum	None	Introduced Cal-IPC Limited
<i>Pinus radiata</i>	Monterey pine	None	Native
Shrubs			
<i>Toxicodendron diversilobum</i>	western poison oak	None	Native
<i>Artemisia californica</i>	California sagebrush	None	Native
<i>Baccharis pilularis</i>	coyote brush	None	Native
<i>Ericameria ericoides</i>	mock-heather	None	Native
<i>Symphoricarpos mollis</i>	snowberry	None	Native
<i>Cornus sericea</i>	American dogwood	None	Native
<i>Arctostaphylos crustacea</i>	Brittle leaf manzanita	None	Native
<i>Arctostaphylos pumila</i>	sandmat manzanita	CRPR 1B.2	Native
<i>Arctostaphylos tomentos</i>	woolly leaf manzanita	None	Native
<i>Genista monspessulana</i>	French broom	None	Introduced Cal-IPC High
<i>Lupinus albifrons</i>	bush lupine	None	Native
<i>Lupinus arboreus</i>	coastal bush lupine	None	Native
<i>Lupinus chamissonis</i>	silver bush lupine	None	Native
<i>Ribes speciosum</i>	fuchsia-flowered gooseberry	None	Native
<i>Salvia mellifera</i>	black sage	None	Native
<i>Mimulus aurantiacus</i>	sticky monkeyflower	None	Native
<i>Ceanothus dentatus</i>	sandscrub ceanothus	None	Native
<i>Ceanothus papillosus</i>	wartleaf ceanothus	None	Native
<i>Frangula californica</i>	coffeeberry	None	Native
<i>Adenostoma fasciculatum</i>	chamise	None	Native
<i>Salix lasiolepis</i>	arroyo willow	None	Native
Herbs			
<i>Dryopteris arguta</i>	Wood fern	None	Native
<i>Equisetum arvense</i>	common horsetail	None	Native
<i>Pentagramma triangularis</i>	Gold back fern	None	Native
<i>Chlorogalum pomeridianum</i>	soap root	None	Native

Transportation Agency for Monterey County
Fort Ord Regional Trail and Greenway Project

Scientific Name	Common Name	Status	Native or Introduced
<i>Carpobrotus edulis</i>	iceplant	None	Introduced Cal-IPC High
<i>Allium hickmanii</i>	Hickman's onion	CRPR 1B.2	Native
<i>Anthriscus caucalis</i>	bur chervil	None	Introduced
<i>Apium graveolens</i>	Garden celery	None	Introduced
<i>Conium maculatum</i>	poison hemlock	None	Introduced Cal-IPC Moderate
<i>Foeniculum vulgare</i>	fennel	None	Introduced Cal-IPC High
<i>Sanicula crassicaulis</i>	Snakeroot	None	Native
<i>Vinca major</i>	periwinkle	None	Introduced Cal-IPC Moderate
<i>Hedera helix</i>	English ivy	None	Introduced Cal-IPC High
<i>Achillea millefolium</i>	common yarrow	None	Native
<i>Artemisia douglasiana</i>	Mugwort	None	Native
<i>Carduus pycnocephalus</i>	Italian thistle	None	Introduced Cal-IPC Moderate
<i>Centaurea melitensis</i>	tocalote	None	Introduced Cal-IPC Moderate
<i>Cirsium occidentale</i>	Cobweb thistle	None	Native
<i>Cirsium vulgare</i>	bull thistle	None	Introduced Cal-IPC Moderate
<i>Corethrogyne filaginifolia</i> var. <i>filaginifolia</i>	Common aster	None	Native
<i>Deinandra corymbosa</i>	coastal tarweed	None	Native
<i>Delairea odorata</i>	Cape-ivy	None	Introduced Cal-IPC High
<i>Erigeron bonariensis</i>	flax-leaved horseweed	None	Introduced
<i>Erigeron canadensis</i>	horseweed	None	Native
<i>Eriophyllum confertiflorum</i>	golden yarrow	None	Native
<i>Euthamia occidentalis</i>	western goldenrod	None	Native
<i>Heterotheca grandiflora</i>	telegraph weed	None	Native
<i>Hypochaeris glabra</i>	smooth cat's ear	None	Introduced Cal-IPC Limited
<i>Layia platyglossa</i>	tidy tips	None	Native
<i>Lessingia pectinata</i> var. <i>pectinata</i>	Valley lessingia	None	Native
<i>Logfia filaginoides</i>	California cottonrose	None	Native
<i>Logfia gallica</i>	Herba impia	None	Introduced
<i>Madia sativa</i>	coast tarweed	None	Native
<i>Matricaria discoidea</i>	pineapple weed	None	Introduced
<i>Microseris douglasii</i> ssp. <i>douglasii</i>	Microseris	None	Native
<i>Pseudognaphalium californicum</i>	California everlasting	None	Native
<i>Pseudognaphalium luteoalbum</i>	cudweed	None	Introduced
<i>Psilocarphus tenellus</i>	Slender woolly heads	None	
<i>Senecio vulgaris</i>	groundsel	None	Introduced
<i>Silybum marianum</i>	milk thistle	None	Introduced Cal-IPC Limited
<i>Sonchus asper</i>	prickly sow thistle	None	Introduced

Scientific Name	Common Name	Status	Native or Introduced
<i>Cryptantha intermedia</i> var. <i>intermedia</i>	cryptantha	None	Native
<i>Eriodictyon californicu,</i>	Yerba Santa	None	Native
<i>Nemophila menziesii</i>	babu blue eyes	None	Native
<i>Pholistoma auritum</i>	Fiesta flower	None	Native
<i>Pholistoma membranaceum</i>	white fiesta flower	None	Native
<i>Brassica nigra</i>	black mustard	None	Introduced Cal-IPC Moderate
<i>Capsella bursa-pastoris</i>	shepherd's purse	None	Introduced
<i>Cardamine oligosperma</i>	bittercress	None	Native
<i>Nasturtium officinale</i>	water cress	None	Native
<i>Raphanus raphanistrum</i>	jointed charlock	None	Introduced
<i>Thysanocarpus curvipes</i>	fringepod	None	Native
<i>Opuntia</i> sp.	Prickly pear cactus	None	Planted
<i>Cardionema ramosissimum</i>	sand mat	None	Native
<i>Cerastium glomeratum</i>	mouse-eared chickweed	None	Introduced
<i>Petrorhagia dubia</i>	windmill pink	None	Introduced
<i>Polycarpon tetraphyllum</i>	fourleaf allseed	None	Introduced
<i>Silene gallica</i>	windmill pinks	None	Introduced
<i>Spargularia rubra</i>	sand spurrey	None	Introduced
<i>Stellaria media</i>	common chickweed	None	Introduced
<i>Crocianthemum scoparium</i>	rush-rose	None	Native
<i>Crassula connata</i>	pygmy-weed	None	Native
<i>Marah fabacea</i>	man-root	None	Native
<i>Carex tumulicola</i>	split awn sedge	None	Native
<i>Schoenoplectus acutus</i> var. <i>occidentalis</i>	common tule	None	Native
<i>Schoenoplectus californicus</i>	Southern bulrush	None	Native
<i>Croton californicus</i>	croton	None	Native
<i>Croton setiger</i>	dove weed	None	Native
<i>Euphorbia crenulata</i>	chinesecaps	None	Native
<i>Euphorbia lathyris</i>	caper spurge	None	Introduced Cal-IPC Watch List
<i>Euphorbia pepus</i>	petty spurge	None	Introduced
<i>Acmispon americanus</i> var. <i>americanus</i>	Spanish clover	None	Native
<i>Acmispon glaber</i>	deerweed	None	Native
<i>Acmispon strigosus</i>	strigose lotus	None	Native
<i>Acmispon wrangelianus</i>	Chilean trefoil	None	Native
<i>Lupinus bicolor</i>	miniature lupine	None	Native
<i>Lupinus nanus</i>	sky lupine	None	Native
<i>Medicago polymorpha</i>	bur clover	None	Introduced Cal-IPC Limited
<i>Melilotus indicus</i>	sour clover	None	Introduced

Amphibians			
<i>Pseudacris sierra</i>	Sierran treefrog	None	Native

Sources; Unless otherwise noted, species were observed during reconnaissance field surveys. An * indicates sign was observed, not individuals.

Appendix E

Special Status Species Evaluation Tables

Special Status Plant Species in the Regional Vicinity of the Project Site

Scientific Name Common Name	Status Fed/State ESA CRPR	Habitat Requirements	Potential to Occur	Rationale
<i>Agrostis lacunavernalis</i> vernal pool bent grass	None/None G1/S1 1B.1	Vernal pools. In mima mound areas or on the margins of vernal pools. 125-150 m. annual herb. Blooms Apr-May	Moderate Potential	This species is known to occur on the former Fort Ord (3 known occurrences) and a vernal pool was mapped on the Trail alignment just south of Watkins Gate Road (NWI), no vernal pool species were observed in this area however.
<i>Allium hickmanii</i> Hickman's onion	None/None G2/S2 1B.2	Closed-cone coniferous forest, chaparral, coastal scrub, coastal prairie, cismontane woodland. Sandy loam, damp ground and vernal swales; mostly in grassland though can be associated with chaparral or woodland. 5-200 m. perennial bulbiferous herb. Blooms Mar-May	Present	This species is known to occur on the former Fort Ord (2 known populations) and a vernal pool was mapped on the Trail alignment just south of Watkins Gate Road (NWI). This species was observed during surveys.
<i>Arctostaphylos hookeri</i> ssp. <i>hookeri</i> Hooker's manzanita	None/None G3T2/S2 1B.2	Chaparral, coastal scrub, closed-cone coniferous forest, cismontane woodland. Sandy soils, sandy shales, sandstone outcrops. 30-550 m. perennial evergreen shrub. Blooms Jan-Jun	High Potential	A known occurrence covers most of the eastern side of the former Fort Ord and extends across the Trail alignment along 8th Avenue just south of Giggling Road.
<i>Arctostaphylos montereyensis</i> Toro manzanita	None/None G2?/S2? 1B.2	Chaparral, cismontane woodland, coastal scrub. Sandy soil, usually with chaparral associates. 45-765 m. perennial evergreen shrub. Blooms Feb-Mar	High Potential	Known occurrences cover most of the eastern side of the former Fort Ord and extend across the Trail alignments: along 8th Avenue just south of Giggling Road; at the CSUMB campus between Eighth Avenue and General Jim Moore Boulevard; northwest of the airport east of Tallmon Street; and just south of Watkins Gate Road.
<i>Arctostaphylos pajaroensis</i> Pajaro manzanita	None/None G1/S1 1B.1	Chaparral. Sandy soils. 30-155 m. perennial evergreen shrub. Blooms Dec-Mar	High Potential	There are 6 known occurrences within 5 miles, including one which crosses the Trail alignment at the intersection of Daivarty Street and Beach Range Road.

Transportation Agency for Monterey County
Fort Ord Regional Trail and Greenway Project

Scientific Name Common Name	Status Fed/State ESA CRPR	Habitat Requirements	Potential to Occur	Rationale
<i>Arctostaphylos pumila</i> sandmat manzanita	None/None G1/S1 1B.2	Closed-cone coniferous forest, chaparral, cismontane woodland, coastal dunes, coastal scrub. On sandy soil with other chaparral associates. 3-210 m. perennial evergreen shrub. Blooms Feb-May	Present	Known occurrences cover most of the former Fort Ord including former bunkers south of the City of Marina. These occurrences extend across the Trail alignments for most of the reach within the former Fort Ord. This species was observed during surveys.
<i>Astragalus tener</i> var. <i>tener</i> alkali milk-vetch	None/None G2T1/S1 1B.2	Alkali playa, valley and foothill grassland, vernal pools. Low ground, alkali flats, and flooded lands; in annual grassland or in playas or vernal pools. 0-168 m. annual herb. Blooms Mar-Jun	Not Expected	A vernal pool was mapped on the Trail alignment just south of Watkins Gate Road, however no vernal pool species were observed and there are no known occurrences within 5 miles.
<i>Astragalus tener</i> var. <i>titi</i> coastal dunes milk-vetch	Endangered/ Endangered G2T1/S1 1B.1	Coastal bluff scrub, coastal dunes, coastal prairie. Moist, sandy depressions of bluffs or dunes along and near the Pacific Ocean; one site on a clay terrace. 1-45 m. annual herb. Blooms Mar-May	Not Expected	Suitable dune habitats are present, however there are no known occurrences within 5 miles.
<i>Bryoria spiralifera</i> twisted horsehair lichen	None/None G3/S1S2 1B.1	North coast coniferous forest. Usually on conifers. 0-30 m. fruticose lichen (epiphytic).	Not Expected	Suitable habitats are present, however there are no known occurrences within 5 miles.
<i>Castilleja ambigua</i> var. <i>insalutata</i> pink Johnny-nip	None/None G4T2/S2 1B.1	Coastal bluff scrub, coastal prairie. 0-100 m. annual herb (hemiparasitic). Blooms May-Aug	High Potential	There are 5 known occurrences within 5 miles, including one which crosses the Trail alignment along Inter Garrison Road.
<i>Centromadia parryi</i> ssp. <i>congdonii</i> Congdon's tarplant	None/None G3T1T2/S1S2 1B.1	Valley and foothill grassland. Alkaline soils, sometimes described as heavy white clay. 0-230 m. annual herb. Blooms May-Oct (Nov)	High Potential	Suitable habitats are present, and there are 10 known occurrences within 5 miles.
<i>Chorizanthe minutiflora</i> Fort Ord spineflower	None/None G1/S1 1B.2	Coastal scrub, chaparral (maritime). Sandy, openings. 60-145 m. annual herb. Blooms Apr-Jul	High Potential	There are 5 known occurrences within 5 miles, all of which are on the former Fort Ord

Scientific Name Common Name	Status Fed/State ESA CRPR	Habitat Requirements	Potential to Occur	Rationale
<i>Chorizanthe pungens</i> var. <i>pungens</i> Monterey spineflower	Threatened/ None G2T2/S2 1B.2	Coastal dunes, chaparral, cismontane woodland, coastal scrub, valley and foothill grassland. Sandy soils in coastal dunes or more inland within chaparral or other habitats. 0-170 m. annual herb. Blooms Apr-Jun (Jul-Aug)	Present	Known occurrences cover most of the former Fort Ord, the Marina airport, and dunes west of Highway 1. These occurrences extend across the Trail alignments for most of the reach within the former Fort Ord. This species was observed during surveys.
<i>Chorizanthe robusta</i> var. <i>robusta</i> robust spineflower	Endangered/ None G2T1/S1 1B.1	Cismontane woodland, coastal dunes, coastal scrub, chaparral. Sandy terraces and bluffs or in loose sand. 9-245 m. annual herb. Blooms Apr-Sep	High Potential	No occurrences have been reported to the CNDDDB within 5 miles, however several individuals were observed in dune habitat on the former Fort Ord and this species was included in the HMP and BO but has not been seen since and may have been misidentified (USACE 2018).
<i>Clarkia jolonensis</i> Jolon clarkia	None/None G2/S2 1B.2	Cismontane woodland, chaparral, coastal scrub, riparian woodland. 10-1280 m. annual herb. Blooms Apr-Jun	Moderate Potential	There are 3 known historic (most recent is 1912) occurrences of this species within 5 miles, from Monterey Peninsula and coastal Seaside including one which overlaps the Trail near Laguna del Rey.
<i>Collinsia multicolor</i> San Francisco collinsia	None/None G2/S2 1B.2	Closed-cone coniferous forest, coastal scrub. On decomposed shale (mudstone) mixed with humus; sometimes on serpentine. 30-275 m. annual herb. Blooms (Feb) Mar-May	Moderate Potential	Suitable habitats are present and there are two known historic (1903) occurrences within 5 miles.
<i>Cordylanthus rigidus</i> ssp. <i>littoralis</i> seaside bird's-beak	None/ Endangered G5T2/S2 1B.1	Closed-cone coniferous forest, chaparral, cismontane woodland, coastal scrub, coastal dunes. Sandy, often disturbed sites, usually within chaparral or coastal scrub. 30-520 m. annual herb (hemiparasitic). Blooms Apr-Oct	High Potential	Suitable habitats are present and 13 known or historic occurrences are within 5 miles.

Transportation Agency for Monterey County
Fort Ord Regional Trail and Greenway Project

Scientific Name Common Name	Status Fed/State ESA CRPR	Habitat Requirements	Potential to Occur	Rationale
<i>Delphinium californicum</i> ssp. <i>interius</i> Hospital Canyon larkspur	None/None G3T3/S3 1B.2	Cismontane woodland, chaparral, coastal scrub. In wet, boggy meadows, openings in chaparral and in canyons. 195-1095 m. perennial herb. Blooms Apr-Jun	Moderate Potential	Suitable habitats are present and there is 1 known occurrence within 5 miles.
<i>Delphinium hutchinsoniae</i> Hutchinson's larkspur	None/None G2/S2 1B.2	Broadleaved upland forest, chaparral, coastal prairie, coastal scrub. On semi-shaded, slightly moist slopes, usually west-facing. 15-535 m. perennial herb. Blooms Mar-Jun	Low Potential	Suitable habitats are present and 1 known historic occurrences is within 5 miles in Pacific Grove.
<i>Delphinium umbraculorum</i> umbrella larkspur	None/None G3/S3 1B.3	Cismontane woodland, chaparral. Mesic sites. 215-2075 m. perennial herb. Blooms Apr-Jun	Low Potential	Suitable habitat is present, however there are no known occurrences within 5 miles.
<i>Ericameria fasciculata</i> Eastwood's goldenbush	None/None G2/S2 1B.1	Closed-cone coniferous forest, chaparral (maritime), coastal scrub, coastal dunes. In sandy openings. 30-215 m. perennial evergreen shrub. Blooms Jul-Oct	High Potential	There are 10 known occurrences within 5 miles, several of which are on Fort Ord and overlap most of the General Jim Trail segment.
<i>Eriogonum nortonii</i> Pinnacles buckwheat	None/None G2/S2 1B.3	Chaparral, valley and foothill grassland. Sandy soils; often on recent burns; western Santa Lucias. 90-975 m. annual herb. Blooms (Apr) May-Aug (Sep)	Low Potential	Suitable habitat is present, however there are no known occurrences within 5 miles.
<i>Erysimum ammophilum</i> sand-loving wallflower	None/None G2/S2 1B.2	Chaparral (maritime), coastal dunes, coastal scrub. Sandy openings. 5-130 m. perennial herb. Blooms Feb-Jun	High Potential	Suitable habitat is present and there are 19 known occurrences within 5 miles, including some from former Fort Ord
<i>Erysimum menziesii</i> Menzies' wallflower	Endangered/ Endangered G1/S1 1B.1	Coastal dunes. Localized on dunes and coastal strand. 1-25 m. perennial herb. Blooms Mar-Sep	Moderate Potential	Limited coastal dune or coastal strand habitat is present, and there are 8 known occurrences within 5 miles.
<i>Fritillaria liliacea</i> fragrant fritillary	None/None G2/S2 1B.2	Coastal scrub, valley and foothill grassland, coastal prairie, cismontane woodland. Often on serpentine; various soils reported though usually on clay, in grassland. 3-400 m. perennial bulbiferous herb. Blooms Feb-Apr	Not Expected	Serpentine habitat is not present. There is 1 known occurrence within 5 miles.

Scientific Name Common Name	Status Fed/State ESA CRPR	Habitat Requirements	Potential to Occur	Rationale
<i>Galium clementis</i> Santa Lucia bedstraw	None/None G2/S2 1B.3	Lower montane coniferous forest, upper montane coniferous forest. Forming soft mats in shady rocky patches; on granite or serpentine; mostly on exposed peaks. 975-1645 m. perennial herb. Blooms (Apr) May-Jul	Not Expected	Suitable habitats are present, however there are no known occurrences within 5 miles.
<i>Gilia tenuiflora</i> ssp. <i>arenaria</i> Monterey gilia	Endangered/ Threatened G3G4T2/S2 1B.2	Coastal dunes, coastal scrub, chaparral (maritime), cismontane woodland. Sandy openings in bare, wind-sheltered areas. Often near dune summit or in the hind dunes; two records from Pleistocene inland dunes. 5-245 m. annual herb. Blooms Apr-Jun	Present	This species is known from 28 occurrences within 5 miles and one large population is mapped on the Trail alignment just north of Watkins Gate Road. This species was observed during surveys.
<i>Hesperocyparis goveniana</i> Gowen cypress	Threatened/ None G1/S1 1B.2	Closed-cone coniferous forest, chaparral. Coastal terraces; usually in sandy soils; sometimes with Monterey pine, bishop pine. 100-125 m. perennial evergreen tree.	Not Expected	Two known occurrences are within 5 miles from the Del Monte Forest. Suitable habitat occurs along the Trail alignment, however this species was not observed during surveys.
<i>Hesperocyparis macrocarpa</i> Monterey cypress	None/None G1/S1 1B.2	Closed-cone coniferous forest. Granitic soils. 10-20 m. perennial evergreen tree.	Present (landscaped)	This species is present in the BSA as a commonly cultivated species.
<i>Holocarpha macradenia</i> Santa Cruz tarplant	Threatened/ Endangered G1/S1 1B.1	Coastal prairie, coastal scrub, valley and foothill grassland. Light, sandy soil or sandy clay; often with nonnatives. 10-220 m. annual herb. Blooms Jun-Oct	Not Expected	Suitable habitats are present, however there are no known occurrences within 5 miles.
<i>Horkelia cuneata</i> var. <i>sericea</i> Kellogg's horkelia	None/None G4T1?/S1? 1B.1	Closed-cone coniferous forest, coastal scrub, coastal dunes, chaparral. Old dunes, coastal sandhills; openings. Sandy or gravelly soils. 5-430 m. perennial herb. Blooms Apr-Sep	High Potential	The species is known from 17 occurrences within 5 miles, three of which overlap the BSA, near General Moore Blvd., near Parker Flats Cutoff Rd. and near 8th Ave.
<i>Horkelia marinensis</i> Point Reyes horkelia	None/None G2/S2 1B.2	Coastal dunes, coastal prairie, coastal scrub. Sandy flats and dunes near coast; in grassland or scrub plant communities. 2-775 m. perennial herb. Blooms May-Sep	Moderate Potential	Suitable habitat is present and there is one known occurrence within 5 miles, west of the Marina Trail segments.

Transportation Agency for Monterey County
Fort Ord Regional Trail and Greenway Project

Scientific Name Common Name	Status Fed/State ESA CRPR	Habitat Requirements	Potential to Occur	Rationale
<i>Lasthenia conjugens</i> Contra Costa goldfields	Endangered/ None G1/S1 1B.1	Valley and foothill grassland, vernal pools, alkaline playas, cismontane woodland. Vernal pools, swales, low depressions, in open grassy areas. 1-450 m. annual herb. Blooms Mar-Jun	Moderate Potential	Suitable habitat is present and there are 3 known occurrences east of the general Jim Trail segment.
<i>Layia carnosa</i> beach layia	Endangered/ Endangered G2/S2 1B.1	Coastal dunes, coastal scrub. On sparsely vegetated, semi-stabilized dunes, usually behind foredunes. 0-30 m. annual herb. Blooms Mar-Jul	Low Potential	Suitable habitat is present and there are 2 known occurrences, at Pt Pinos and Asilomar.
<i>Legenere limosa</i> legenere	None/None G2/S2 1B.1	Vernal pools. In beds of vernal pools. 1-1005 m. annual herb. Blooms Apr-Jun	Not Expected	Suitable habitat is not present, there is 1 known occurrence east of the General Jim Trail segment.
<i>Lupinus tidestromii</i> Tidestrom's lupine	Endangered/ Endangered G1/S1 1B.1	Coastal dunes. Partially stabilized dunes, immediately near the ocean. 4-25 m. perennial rhizomatous herb. Blooms Apr-Jun	Low Potential	Suitable habitat is present and there are 5 known occurrences within 5 miles, at Pt Pinos, Asilomar and Spanish Bay.
<i>Malacothamnus palmeri</i> var. <i>involutus</i> Carmel Valley bush-mallow	None/None G3T2Q/S2 1B.2	Cismontane woodland, chaparral, coastal scrub. Talus hilltops and slopes, sometimes on serpentine. Fire dependent. 5-520 m. perennial deciduous shrub. Blooms Apr-Oct	Low Potential	Suitable habitat is present and there are 13 known occurrences within 5 miles, primarily from Carmel Valley.
<i>Malacothamnus palmeri</i> var. <i>palmeri</i> Santa Lucia bush-mallow	None/None G3T2Q/S2 1B.2	Chaparral. Dry rocky slopes, mostly near summits, but occasionally extending down canyons to the sea. 3-670 m. perennial deciduous shrub. Blooms May-Jul	Not Expected	Suitable habitat is present, however there are no known occurrences within 5 miles.
<i>Malacothrix saxatilis</i> var. <i>arachnoidea</i> Carmel Valley malacothrix	None/None G5T2/S2 1B.2	Chaparral, coastal scrub. Rock outcrops or steep rocky roadcuts. 30-1040 m. perennial rhizomatous herb. Blooms (Mar)Jun-Dec	Low Potential	Suitable habitat is present, and there are 3 known occurrences are mapped along Carmel Valley Rd within 5 miles.
<i>Meconella oregana</i> Oregon meconella	None/None G2G3/S2 1B.1	Coastal prairie, coastal scrub. Open, moist places. 60-640 m. annual herb. Blooms Mar-Apr	Moderate Potential	Suitable habitat is present and there are 2 known occurrences within 5 miles, east of the General Jim Trail segment.

Scientific Name Common Name	Status Fed/State ESA CRPR	Habitat Requirements	Potential to Occur	Rationale
<i>Microseris paludosa</i> marsh microseris	None/None G2/S2 1B.2	Closed-cone coniferous forest, cismontane woodland, coastal scrub, valley and foothill grassland. 3-610 m. perennial herb. Blooms Apr-Jun (Jul)	Moderate Potential	Suitable habitat is present but limited and there are 8 known occurrences within 5 miles, 3 of which occur east of the General Jim Trail segment.
<i>Monardella sinuata</i> <i>ssp. nigrescens</i> northern curly-leaved monardella	None/None G3T2/S2 1B.2	Coastal dunes, coastal scrub, chaparral, lower montane coniferous forest. Sandy soils. 10-245 m. annual herb. Blooms (Apr)May-Jul (Aug-Sep)	High Potential	Suitable habitat is present and there are 8 known occurrences within 5 miles, 3 of which overlap the BSA at the General Jim Trail segment, and the CSUMB South Trail segment.
<i>Monolopia gracilens</i> woodland woollythreads	None/None G3/S3 1B.2	Chaparral, valley and foothill grassland, cismontane woodland, broadleafed upland forest, North Coast coniferous forest. Grassy sites, in openings; sandy to rocky soils. Often seen on serpentine after burns, but may have only weak affinity to serpentine. 120-975 m. annual herb. Blooms (Feb)Mar-Jul	Not Expected	Suitable habitat is present, however there are no known occurrences within 5 miles.
<i>Pinus radiata</i> Monterey pine	None/None G1/S1 1B.1	Closed-cone coniferous forest, cismontane woodland. Three primary stands are native to California. Dry bluffs and slopes. 60-125 m. perennial evergreen tree.	Present (landscaped)	This species is present in the BSA as a commonly cultivated species.
<i>Piperia yadonii</i> Yadon's rein orchid	Endangered/ None G1/S1 1B.1	Closed-cone coniferous forest, chaparral, coastal bluff scrub. On sandstone and sandy soil, but poorly drained and often dry. 10-505 m. perennial herb. Blooms (Feb)May-Aug	High Potential	Suitable habitat is present and there are 11 known occurrences within 5 miles, and this species is known to occur on the Former Fort Ord.
<i>Plagiobothrys</i> <i>chorisianus</i> var. <i>chorisianus</i> Choris' popcornflower	None/None G3T1Q/S1 1B.2	Chaparral, coastal scrub, coastal prairie. Mesic sites. 2-705 m. annual herb. Blooms Mar-Jun	Moderate Potential	Suitable habitat is present but limited and there are 2 known occurrences within 5 miles, both of which occur east of the General Jim Trail segment.
<i>Plagiobothrys</i> <i>diffusus</i> San Francisco popcornflower	None/ Endangered G1Q/S1 1B.1	Valley and foothill grassland, coastal prairie. Historically from grassy slopes with marine influence. 45-360 m. annual herb. Blooms Mar-Jun	Not Expected	Suitable habitat is present, however there are no known occurrences within 5 miles.

Transportation Agency for Monterey County
Fort Ord Regional Trail and Greenway Project

Scientific Name Common Name	Status Fed/State ESA CRPR	Habitat Requirements	Potential to Occur	Rationale
<i>Plagiobothrys uncinatus</i> hooked popcornflower	None/None G2/S2 1B.2	Chaparral, cismontane woodland, valley and foothill grassland. Sandstone outcrops and canyon sides; often in burned or disturbed areas. 210-855 m. annual herb. Blooms Apr-May	Not Expected	Suitable habitat is present, however there are no known occurrences within 5 miles.
<i>Potentilla hickmanii</i> Hickman's cinquefoil	Endangered/ Endangered G1/S1 1B.1	Coastal bluff scrub, closed-cone coniferous forest, meadows and seeps, marshes and swamps. Freshwater marshes, seeps, and small streams in open or forested areas along the coast. 5-125 m. perennial herb. Blooms Apr-Aug	Moderate Potential	Suitable habitat is present but limited and there are 2 known occurrences within 5 miles, both of which occur in Pacific Grove.
<i>Ramalina thrausta</i> angel's hair lichen	None/None G5/S2? 2B.1	North coast coniferous forest. On dead twigs and other lichens. 75-430 m. fruticose lichen (epiphytic).	Moderate Potential	Suitable habitat is present but limited and there is 1 known occurrence within 5 miles, from the Del Monte Forest.
<i>Rosa pinetorum</i> pine rose	None/None G2/S2 1B.2	Closed-cone coniferous forest, cismontane woodland. 5-1090 m. perennial shrub. Blooms May-Jul	Moderate Potential	Suitable habitat is present but limited and there are 5 known occurrences within 5 miles, one of which overlaps the Del Ray Oaks/218 Trail segment.
<i>Stebbinsoseris decipiens</i> Santa Cruz microseris	None/None G2/S2 1B.2	Broadleafed upland forest, closed-cone coniferous forest, chaparral, coastal prairie, coastal scrub, valley and foothill grassland. Open areas in loose or disturbed soil, usually derived from sandstone, shale or serpentine, on seaward slopes. 90-750 m. annual herb. Blooms Apr-May	Moderate Potential	Suitable habitat is present and there are 2 known occurrences within 5 miles, one of which occurs south of the Ryan Ranch Trail segment.
<i>Trifolium buckwestiorum</i> Santa Cruz clover	None/None G2/S2 1B.1	Coastal prairie, broadleafed upland forest, cismontane woodland. Moist grassland. Gravelly margins. 30-550 m. annual herb. Blooms Apr-Oct	Moderate Potential	Suitable habitat is present but limited and there are 6 known occurrences within 5 miles, 4 of which occur east of the General Jim Trail segment.

Scientific Name Common Name	Status Fed/State ESA CRPR	Habitat Requirements	Potential to Occur	Rationale
<i>Trifolium hydrophilum</i> saline clover	None/None G2/S2 1B.2	Marshes and swamps, valley and foothill grassland, vernal pools. Mesic, alkaline sites. 1-335 m. annual herb. Blooms Apr-Jun	Moderate Potential	Suitable habitat is present but limited and there are 3 known occurrences within 5 miles, 1 to the south in Pacific Grove and 2 north of the Marina Trail segments near the mouth of the Salinas River.
<i>Trifolium polyodon</i> Pacific Grove clover	None/Rare G1/S1 1B.1	Closed-cone coniferous forest, meadows and seeps, coastal prairie, valley and foothill grassland. Along small springs and seeps in grassy openings. 5-260 m. annual herb. Blooms Apr-Jun (Jul)	Moderate Potential	Suitable habitat is present and there are 8 known occurrences within 5 miles, 2 of which occur south of the Del Rey Oaks/218 and Ryan Ranch Trail segments.
<i>Trifolium trichocalyx</i> Monterey clover	Endangered/ Endangered G1/S1 1B.1	Closed-cone coniferous forest. Openings, burned areas, and roadsides. Sandy soils. 60-210 m. annual herb. Blooms Apr-Jun	Low Potential	Suitable habitat is present but limited and there are 8 known occurrences within 5 miles, all of which occur in the Del Monte Forest.

Regional Vicinity refers to within a 12-quad search radius of site.

FE = Federally Endangered FT = Federally Threatened FC = Federal Candidate Species

SE = State Endangered ST = State Threatened SC = State Candidate SR = State Rare

CRPR (CNPS California Rare Plant Rank)

1A=Presumed Extinct in California

1B=Rare, Threatened, or Endangered in California and elsewhere

2A=Plants presumed extirpated in California, but more common elsewhere

2B=Plants Rare, Threatened, or Endangered in California, but more common elsewhere

CRPR Threat Code Extension

.1=Seriously endangered in California (over 80% of occurrences threatened/high degree and immediacy of threat)

.2=Fairly endangered in California (20-80% occurrences threatened)

.3=Not very endangered in California (<20% of occurrences threatened)

Special Status Animal Species in the Regional Vicinity of the Project Site

Scientific Name Common Name	Status Fed/State ESA CDFW	Habitat Requirements	Potential to Occur	Rationale
Invertebrates				
<i>Danaus plexippus</i> pop. 1 monarch - California overwintering population	None/None G4T2T3/S2S3	Winter roost sites extend along the coast from northern Mendocino to Baja California, Mexico. Roosts located in wind-protected tree groves (eucalyptus, Monterey pine, cypress), with nectar and water sources nearby.	Not Expected	No roost sites are located within the BSA. The species is known from 5 occurrences within 5 miles.
<i>Euphilotes enoptes smithi</i> Smith's blue butterfly	Endangered/ None G5T1T2/S1S2	Most commonly associated with coastal dunes & coastal sage scrub plant communities in Monterey & Santa Cruz counties. Hostplant: <i>Eriogonum latifolium</i> and <i>Eriogonum parvifolium</i> are utilized as both larval and adult food plants.	Moderate Potential	Suitable habitat is present and there are 6 known occurrences within 5 miles, 4 of which occur along the beaches and dunes west of the BSA.
Reptiles				
<i>Anniella pulchra</i> northern California legless lizard	None/None G3/S3 SSC	Sandy or loose loamy soils under sparse vegetation. Soil moisture is essential. They prefer soils with a high moisture content.	High Potential	Suitable habitat is present and there are 39 known occurrences within 5 miles, most of which occur along the beaches west of the BSA.
<i>Emys marmorata</i> western pond turtle	None/None G3G4/S3 SSC	A thoroughly aquatic turtle of ponds, marshes, rivers, streams and irrigation ditches, usually with aquatic vegetation, below 6000 ft elevation. Needs basking sites and suitable (sandy banks or grassy open fields) upland habitat up to 0.5 km from water for egg-laying.	High Potential	Suitable habitat is present in the BSA at Laguna Grande and the Frog Pond, and there are 5 known occurrences within 5 miles, 1 of which occurs just west of the Marina Trail segment.
<i>Phrynosoma blainvillii</i> coast horned lizard	None/None G3G4/S3S4 SSC	Frequents a wide variety of habitats, most common in lowlands along sandy washes with scattered low bushes. Open areas for sunning, bushes for cover, patches of loose soil for burial, and abundant supply of ants and other insects.	Present	Though there are no reported occurrences within 5 miles suitable habitat is present, and this species was observed in the General Jim Trail segment.
<i>Thamnophis hammondi</i> two-striped gartersnake	None/None G4/S3S4 SSC	Coastal California from vicinity of Salinas to northwest Baja California. From sea to about 7,000 ft elevation. Highly aquatic, found in or near permanent fresh water. Often along streams with rocky beds and riparian growth.	High Potential	Suitable habitat is present in the BSA at Laguna Grande and the Frog Pond, and there are 5 known occurrences within 5 miles, 1 of which occurs just west of the Marina Trail segment.

Scientific Name Common Name	Status Fed/State ESA CDFW	Habitat Requirements	Potential to Occur	Rationale
Amphibians				
<i>Ambystoma californiense</i> California tiger salamander	Threatened/ Threatened G2G3/S2S3 WL	Central Valley DPS federally listed as threatened. Santa Barbara and Sonoma counties DPS federally listed as endangered. Need underground refuges, especially ground squirrel burrows, and vernal pools or other seasonal water sources for breeding.	High Potential	Suitable habitat is present and there are 29 known occurrences with 5 miles, most of which occur west of the General Jim and Northern Loop Trail alignments. One occurrence overlapping the BSA was reported at the intersection of Inter-Garrison Rd and Reservation Rd, where breeding was observed at a detention basin.
<i>Ambystoma macrodactylum</i> croceum Santa Cruz long-toed salamander	Endangered/ Endangered G5T1T2/S1S2 FP	Wet meadows near sea level in a few restricted locales in Santa Cruz and Monterey counties. Aquatic larvae prefer shallow (<12 inches) water, using clumps of vegetation or debris for cover. Adults use mammal burrows.	Not Expected	Suitable habitat is absent and the species is not known to occur within 5 miles.
<i>Rana boylei</i> foothill yellow-legged frog	None/Candidate Threatened G3/S3 SSC	Partly-shaded, shallow streams and riffles with a rocky substrate in a variety of habitats. Needs at least some cobble-sized substrate for egg-laying. Needs at least 15 weeks to attain metamorphosis.	Not Expected	Suitable habitat is absent and the species is not known to occur within 5 miles.
<i>Rana draytonii</i> California red-legged frog	Threatened/None G2G3/S2S3 SSC	Lowlands and foothills in or near permanent sources of deep water with dense, shrubby or emergent riparian vegetation. Requires 11-20 weeks of permanent water for larval development. Must have access to estivation habitat.	Moderate Potential	Suitable habitat is present and there are 29 known occurrences with 5 miles, most of which occur along the Carmel River. One occurrence was reported from the Salinas River, north of the Marina Trail segment.
<i>Taricha torosa</i> Coast Range newt	None/None G4/S4 SSC	Coastal drainages from Mendocino County to San Diego County. Lives in terrestrial habitats & will migrate over 1 km to breed in ponds, reservoirs & slow moving streams.	Moderate Potential	Suitable habitat is present but limited and there are no occurrences reported to the CNDDDB within 5 miles, however this species is known to occur on the former Fort Ord and the regional vicinity.

Transportation Agency for Monterey County
Fort Ord Regional Trail and Greenway Project

Scientific Name Common Name	Status Fed/State ESA CDFW	Habitat Requirements	Potential to Occur	Rationale
Fish				
<i>Eucyclogobius newberryi</i> tidewater goby	Endangered/ None G3/S3 SSC	Brackish water habitats along the California coast from Agua Hedionda Lagoon, San Diego County to the mouth of the Smith River. Found in shallow lagoons and lower stream reaches, they need fairly still but not stagnant water and high oxygen levels.	Not Expected	Brackish water habitats are not present
<i>Oncorhynchus mykiss irideus</i> pop. 9 steelhead - south-central California coast DPS	Threatened/None G5T2Q/S2	Federal listing refers to runs in coastal basins from the Pajaro River south to, but not including, the Santa Maria River.	Not Expected	The culverts and outfall (sand bar) below Roberts Lake likely block movement for anadromous fish.
<i>Spirinchus thaleichthys</i> longfin smelt	Candidate/ Threatened G5/S1 SSC	Euryhaline, nektonic & anadromous. Found in open waters of estuaries, mostly in middle or bottom of water column. Prefer salinities of 15-30 ppt, but can be found in completely freshwater to almost pure seawater.	Not Expected	Brackish water habitats are not present
Birds				
<i>Accipiter cooperii</i> Cooper's hawk	None/None G5/S4 WL	Woodland, chiefly of open, interrupted or marginal type. Nest sites mainly in riparian growths of deciduous trees, as in canyon bottoms on river flood-plains; also, live oaks.	High Potential	Suitable habitat is present and this species was observed during surveys of the Del Ray Oaks Trail segment.
<i>Agelaius tricolor</i> tricolored blackbird	None/Threatened G2G3/S1S2 SSC	Highly colonial species, most numerous in Central Valley & vicinity. Largely endemic to California. Requires open water, protected nesting substrate, and foraging area with insect prey within a few km of the colony.	Moderate Potential	Suitable habitat is present at Laguna Grande and Roberts lake, and there are 9 known occurrences within 5 miles.
<i>Aquila chrysaetos</i> golden eagle	None/None G5/S3 FP, WL	Rolling foothills, mountain areas, sage-juniper flats, and desert. Cliff-walled canyons provide nesting habitat in most parts of range; also, large trees in open areas.	Moderate Potential	Although there are no occurrences recorded on the CNDDDB within 5 miles numerous reports have been documented on eBird, and suitable nest trees occur within 0.25 miles of the Trail alignment.

Scientific Name Common Name	Status Fed/State ESA CDFW	Habitat Requirements	Potential to Occur	Rationale
<i>Asio flammeus</i> short-eared owl	None/None G5/S3 SSC	Found in swamp lands, both fresh and salt; lowland meadows; irrigated alfalfa fields. Tule patches/tall grass needed for nesting/daytime seclusion. Nests on dry ground in depression concealed in vegetation.	Not Expected	One occurrence of this species is known from the mouth of the Salinas River, however suitable nesting habitat is not present along the Trail alignment
<i>Athene cunicularia</i> burrowing owl	None/None G4/S3 SSC	Open, dry annual or perennial grasslands, deserts, and scrublands characterized by low-growing vegetation. Subterranean nester, dependent upon burrowing mammals, most notably, the California ground squirrel.	High Potential	Suitable habitat is present in annual grassland, low scrub, and open spaces, and there are 5 known occurrences within 5 miles, including 2 overlapping the Marina and CSUMB North Trail segments.
<i>Buteo regalis</i> ferruginous hawk	None/None G4/S3S4 WL	Open grasslands, sagebrush flats, desert scrub, low foothills and fringes of pinyon and juniper habitats. Eats mostly lagomorphs, ground squirrels, and mice. Population trends may follow lagomorph population cycles.	High Potential	Suitable habitat is present in annual grassland, low scrub/woodlands, and open spaces, and there is 1 known occurrence within 5 miles, overlapping the Marina Trail segment.
<i>Buteo swainsoni</i> Swainson's hawk	None/Threatened G5/S3	Breeds in grasslands with scattered trees, juniper-sage flats, riparian areas, savannahs, & agricultural or ranch lands with groves or lines of trees. Requires adjacent suitable foraging areas such as grasslands, or alfalfa or grain fields supporting rodent populations.	Not Expected	There are no occurrences recorded on the CNDDB within 5 miles. Reports have been documented on eBird, however these are likely migrants.
<i>Charadrius alexandrinus nivosus</i> western snowy plover	Threatened/None G3T3/S2S3 SSC	Sandy beaches, salt pond levees & shores of large alkali lakes. Needs sandy, gravelly or friable soils for nesting.	Not Expected	Although there are 8 known occurrences within 5 miles suitable sandy beach habitat or alkali lakes are not present. This species is restricted to the dunes west of highway 1.
<i>Circus cyaneus</i> northern harrier	None/None G5/S3 SSC	Coastal salt & freshwater marsh. Nest and forage in grasslands, from salt grass in desert sink to mountain cienagas. Nests on ground in shrubby vegetation, usually at marsh edge; nest built of a large mound of sticks in wet areas.	Present	Suitable habitat is present at the Marina Trail segment and this species was observed foraging over fields north of the Marina Airport.

Transportation Agency for Monterey County
Fort Ord Regional Trail and Greenway Project

Scientific Name Common Name	Status Fed/State ESA CDFW	Habitat Requirements	Potential to Occur	Rationale
<i>Coturnicops noveboracensis</i> yellow rail	None/None G4/S1S2 SSC	Summer resident in eastern Sierra Nevada in Mono County. Freshwater marshlands.	Not Expected	Suitable habitat is present at Laguna Grande and the Frog Pond and there are 2 known occurrences within 5 miles, however this species is rarely observed in Monterey County.
<i>Cypseloides niger</i> black swift	None/None G4/S2 SSC	Coastal belt of Santa Cruz and Monterey counties; central & southern Sierra Nevada; San Bernardino & San Jacinto mountains. Breeds in small colonies on cliffs behind or adjacent to waterfalls in deep canyons and sea-bluffs above the surf; forages widely.	Not Expected	Suitable nesting habitat is not present, and there are no known occurrences within 5 miles.
<i>Elanus leucurus</i> white-tailed kite	None/None G5/S3S4 FP	Rolling foothills and valley margins with scattered oaks & river bottomlands or marshes next to deciduous woodland. Open grasslands, meadows, or marshes for foraging close to isolated, dense-topped trees for nesting and perching.	High Potential	Although there are no occurrences recorded on the CNDDDB within 5 miles, numerous reports have been documented on eBird, and this species was observed foraging over sections of the northern loop and Marina Trail segments during the reconnaissance survey.
<i>Eremophila alpestris actia</i> California horned lark	None/None G5T4Q/S4 WL	Coastal regions, chiefly from Sonoma County to San Diego County. Also main part of San Joaquin Valley and east to foothills. Short-grass prairie, "bald" hills, mountain meadows, open coastal plains, fallow grain fields, alkali flats.	High Potential	Suitable habitat is present in annual grassland, low scrub/woodlands, and open spaces, and there are 2 known occurrences within 5 miles, overlapping the Marina and northern loop Trail segments.
<i>Falco mexicanus</i> prairie falcon	None/None G5/S4 WL	Inhabits dry, open terrain, either level or hilly. Breeding sites located on cliffs. Forages far afield, even to marshlands and ocean shores.	Not Expected	No occurrences recorded on the CNDDDB within 5 miles, numerous reports have been documented on eBird however cliffs suitable for nesting are not present.
<i>Falco peregrinus anatum</i> American peregrine falcon	Delisted/Delisted G4T4/S3S4 FP	Near wetlands, lakes, rivers, or other water; on cliffs, banks, dunes, mounds; also, human-made structures. Nest consists of a scrape or a depression or ledge in an open site.	Not Expected	There are no occurrences recorded on the CNDDDB within 5 miles, numerous reports have been documented on eBird and a pair is known to roost on the Embassy Suites in Seaside adjacent to Laguna Grande, however no suitable buildings or cliffs occur in the BSA.

Scientific Name Common Name	Status Fed/State ESA CDFW	Habitat Requirements	Potential to Occur	Rationale
<i>Laterallus jamaicensis coturniculus</i> California black rail	None/Threatened G3G4T1/S1 FP	Inhabits freshwater marshes, wet meadows and shallow margins of saltwater marshes bordering larger bays. Needs water depths of about 1 inch that do not fluctuate during the year and dense vegetation for nesting habitat.	Not Expected	Suitable habitat is present at Laguna Grande and there are 2 known occurrences within 5 miles, however this species is rarely observed in Monterey County.
<i>Pelecanus occidentalis californicus</i> California brown pelican	Delisted/Delisted G4T3T4/S3 FP	Colonial nester on coastal islands just outside the surf line. Nests on coastal islands of small to moderate size which afford immunity from attack by ground-dwelling predators. Roosts communally.	Not Expected	There are no occurrences recorded on the CNDDDB within 5 miles, several reports have been documented on eBird however no suitable nesting habitat occurs within the BSA.
<i>Rallus obsoletus obsoletus</i> California Ridgway's rail	Endangered/ Endangered G5T1/S1 FP	Salt water and brackish marshes traversed by tidal sloughs in the vicinity of San Francisco Bay. Associated with abundant growths of pickleweed, but feeds away from cover on invertebrates from mud-bottomed sloughs.	Not Expected	There are no occurrences recorded on the CNDDDB within 5 miles and no suitable salt marsh habitat occurs within the BSA.
<i>Riparia riparia</i> bank swallow	None/ Threatened G5/S2	Colonial nester; nests primarily in riparian and other lowland habitats west of the desert. Requires vertical banks/cliffs with fine-textured/sandy soils near streams, rivers, lakes, ocean to dig nesting hole.	Not Expected	There are 2 occurrences recorded on the CNDDDB within 5 miles, however no suitable nesting habitat occurs within the BSA.
<i>Vireo bellii pusillus</i> least Bell's vireo	Endangered/ Endangered G5T2/S2	Summer resident of Southern California in low riparian in vicinity of water or in dry river bottoms; below 2000 ft. Nests placed along margins of bushes or on twigs projecting into pathways, usually willow, Baccharis, mesquite.	Not Expected	There are no occurrences recorded on the CNDDDB within 5 miles and this species is rarely observed in Monterey County.
Mammals				
<i>Antrozous pallidus</i> pallid bat	None/None G5/S3 SSC	Deserts, grasslands, shrublands, woodlands and forests. Most common in open, dry habitats with rocky areas for roosting. Roosts must protect bats from high temperatures. Very sensitive to disturbance of roosting sites.	Low Potential	Suitable grasslands and scrublands are present, however there are no known occurrences within 5 miles.

Transportation Agency for Monterey County
Fort Ord Regional Trail and Greenway Project

Scientific Name Common Name	Status Fed/State ESA CDFW	Habitat Requirements	Potential to Occur	Rationale
<i>Corynorhinus townsendii</i> Townsend's big-eared bat	None/None G3G4/S2 SSC	Throughout California in a wide variety of habitats. Most common in mesic sites. Roosts in the open, hanging from walls and ceilings. Roosting sites limiting. Extremely sensitive to human disturbance.	Low potential	Suitable habitats and mesic sites are present, however there are no known occurrences within 5 miles.
<i>Taxidea taxus</i> American badger	None/None G5/S3 SSC	Most abundant in drier open stages of most shrub, forest, and herbaceous habitats, with friable soils. Needs sufficient food, friable soils and open, uncultivated ground. Preys on burrowing rodents. Digs burrows.	High Potential	There are no occurrences recorded on the CNDDDB within 5 miles however this species is known to occur on the former Fort Ord, and evidence of badger excavations was observed during the reconnaissance survey.
Regional Vicinity refers to within a 12-quad search radius of site.

FORTAG Construction - Monterey County, Winter

Project Characteristics -

Land Use -

Construction Phase - Assume a total of 18 months for construction. Divided approximately evenly among phases.

Off-road Equipment -

Off-road Equipment - Added skid steer loader per info needs list

Off-road Equipment - added a plate compactor per the info needs list

Off-road Equipment - Added excavator and truck per info needs list

Trips and VMT - Adjusted construction and coating trips to be consistent with other phases based on per equipment calculation.

Grading - grading phase includes aggregate and pavement import

Construction Off-road Equipment Mitigation -

FORTAG Construction - Monterey County, Winter

Climate Zone	4			Operational Year	2021
Utility Company	Pacific Gas & Electric Company				
CO2 Intensity (lb/MWhr)	641.35	CH4 Intensity (lb/MWhr)	0.029	N2O Intensity (lb/MWhr)	0.006

1.3 User Entered Comments & Non-Default Data

FORTAG Construction - Monterey County, Annual

Project Characteristics -

Land Use -

Construction Phase - Assume a total of 18 months for construction. Divided approximately evenly among phases.

Off-road Equipment -

Off-road Equipment - Added skid steer loader per info needs list

Off-road Equipment - added a plate compactor per the info needs list

Off-road Equipment - Added excavator and truck per info needs list

Trips and VMT - Adjusted construction and coating trips to be consistent with other phases based on per equipment calculation.

Grading - grading phase includes aggregate and pavement import

Construction Off-road Equipment Mitigation -

FORTAG Construction - Monterey County, Annual

Executive Summary

Rincon Consultants, Inc. (Rincon) was retained by the Transportation Agency for Monterey County (TAMC) to conduct a paleontological resource assessment for the Fort Ord Regional Trail and Greenway Project (“FORTAG” or “Trail”), which includes a 28-mile multi-use trail in the County of Monterey. This study has been prepared in conformance with the California Environmental Quality Act (CEQA) and includes a records search, literature review, and paleontological sensitivity assessment consistent with the professional standards of the Society of Vertebrate Paleontology (SVP 2010). The purpose of the literature review and records search was to identify the geologic unit(s) underlying the project and to determine whether previously recorded paleontological localities occur either within the project boundaries or elsewhere in the same geologic unit(s). Using the results of the literature review and records search, the paleontological resource potential of the project corridor was determined in accordance with the 2010 SVP guidelines.

Results of Investigation

Published geologic mapping indicates that the project is underlain by older Quaternary (Pleistocene) dune sand (Qod), the Aromas Sand (Qae), and younger Quaternary (Holocene) alluvium and basin deposits (Q, Qb). A records search for paleontological locality data within the project and the vicinity indicates no vertebrate fossil localities have been previously recorded directly in the project boundary; however, multiple vertebrate fossil localities have been previously recorded nearby within deposits of older Quaternary aeolian deposits and the Monterey Formation (McLeod 2019; UCMP 2019). These localities yielded scientifically significant fossilized specimens of large terrestrial and marine mammals and reptiles. Based on this assessment, the surficial geology of the project corridor has a low paleontological sensitivity but increases with depth. Particularly, the geologic deposits of Pleistocene age immediately underlying the project (i.e., Qod, Qae) have a high potential to contain paleontological resources at moderate depth. As currently proposed, the majority of project ground disturbance would not exceed 12 inches below ground surface for the project corridor. Such minimal ground disturbance (i.e., shallow excavations) within intact (native) deposits would not likely cause significant impacts to paleontological resources. However, ground disturbing activities for the proposed overcrossings (i.e., bridges) and undercrossings (i.e., tunnels) along the Northern Loop, Canyon Del Rey/SR 218, and CSUMB Loop North segments, as well as ground disturbance for the raised platform along the Canyon Del Rey/SR 218 segment, would require extensive excavations within intact Pleistocene deposits underlying the project corridor, which could potentially result in significant impacts to paleontological resources.

Recommendations

Rincon recommends that a qualified paleontologist be retained to develop and implement a Paleontological Resources Mitigation Plan during project construction in areas of high paleontological sensitivity, including areas requiring extensive excavations (i.e., proposed overcrossings and undercrossings along the Northern Loop, Canyon Del Rey/SR 218, and CSUMB Loop North segments and raised platform along the Canyon Del Rey/SR 218 segment). This plan would include mitigation measures that have been proven to be effective in reducing or eliminating adverse impacts to paleontological resources and would satisfy the requirements of CEQA. The recommended mitigation measures include paleontological monitoring by a qualified paleontologist and preparation of a paleontological monitoring report, which should be submitted to the approved curation facility, accompanied by all significant fossils recovered during construction monitoring.

1 Introduction

Paleontological resources (i.e., fossils) are the remains or traces of prehistoric life. Fossils are typically preserved in layered sedimentary rocks and the distribution of fossils across the landscape is controlled by the distribution and exposure of the fossiliferous sedimentary rock units at and near the surface. Construction related impacts that typically affect or have the potential to affect paleontological resources include mass excavation operations, trenching/tunneling, and grading.

This Paleontological Resources Assessment provides a description of the geologic units mapped at the surface within the project corridor, including types of fossils known to occur within the units (if any), the paleontological sensitivity for each unit, a review of relevant agency regulation, an assessment of potential impacts from project development, and recommended mitigation measures for the protection and recovery of significant fossils that may be impacted. This study has also been conducted in accordance with the requirements of the California Environmental Quality Act (CEQA).

1.1 Project Location and Description

The Fort Ord Regional Trail and Greenway Project (“FORTAG” or “Trail”) alignment is located in the southern Monterey Bay area in Monterey County (Figure 1). The project corridor includes seven multi-use trail segments and crosses the cities of Marina, Seaside, Del Rey Oaks, Monterey, unincorporated areas of Monterey County, and lands, properties, and rights-of-way under the jurisdiction of California State University Monterey Bay (CSUMB), Fort Ord Reuse Authority (FORA), California Department of Transportation (Caltrans), and Monterey Peninsula Regional Park District (**Error! Reference source not found.**). The trail would connect with the existing Monterey Bay Coastal Recreation Trail (Coastal Rec Trail) just west of State Route (SR) 1, and would extend through developed areas and across former Fort Ord lands to the east.

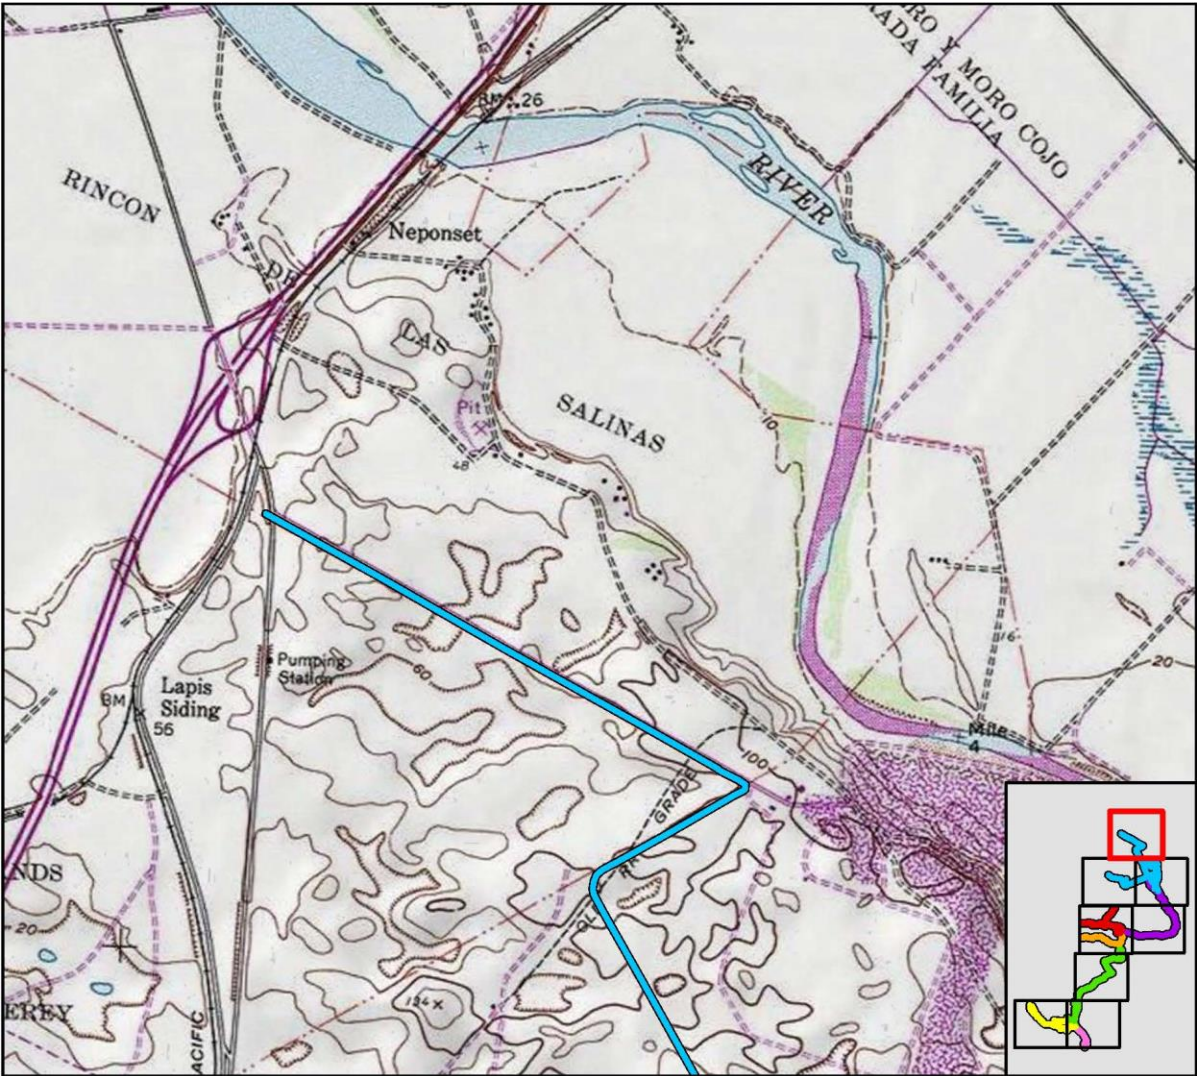

FORTAG includes approximately 28 miles of existing and newly constructed paved trails, primarily on the inland side of SR 1. The trail would accommodate pedestrians and bicyclists of all abilities. It would also accommodate equestrians in some segments. Dogs would be allowed on-leash throughout the system. The estimated number of trail users would be between 1,000 and 3,000 daily, with the highest usage occurring near the CSUMB campus and the Coastal Rec Trail (Powell 2019).

The majority of FORTAG would be a 12-foot-wide paved path, with a two-foot-wide unpaved shoulder on both sides. Project ground disturbance would not exceed 12 inches below ground surface for the majority of the alignment. For approximately 1.3 miles of the Trail’s 28-mile length (4.6 percent), FORTAG would include an adjacent four- to eight-foot wide side path, separated from the paved path. The side path would be composed of compacted native soil and separated from the paved path by a minimum of four feet. A small portion of the trail (approximately 2,000 feet or one percent) would be developed on existing paved roadways in two locations: in Del Rey Oaks on Angelus Way, between Rosita Road and Del Rey Gardens; and in Marina on Beach Road, between Del Monte Boulevard and De Forest Road. In these areas, the project would primarily involve restriping, sidewalk improvements, and the installation of an unpaved buffer adjacent to the trail. In the Frog Pond Wetland Preserve in Del Rey Oaks, the proposed trail width would be reduced to eight feet, and a stable, permeable surface would be used in lieu of impermeable pavement, due to the sensitive natural resources in the area. In addition, before crossing Canyon Del Rey/SR 218, the Trail would consist of a 12-foot-wide raised pathway that would switchback after approximately 200 feet to allow Trail users access to the alignment along Carlton Drive. No buildings or structures are proposed to be demolished or altered as part of the project

Figure 1 Proposed Alignment (Including Options)¹

¹ Figure has been updated since the Draft EIR to include the raised pathway through the Frog Pond.

2 Regulatory Setting

Paleontological resources are considered nonrenewable scientific resources because once destroyed, they cannot be replaced. As such, paleontological resources are afforded protection under various federal, state, and local laws, ordinances, regulations, and standards. Regulations applicable to potential paleontological resources along the project corridor are summarized below.

2.1 State

2.1.1 California Environmental Quality Act

CEQA requires public agencies and private interests to identify the potential environmental consequences of their proposed projects on any object or site considered to be a historical resource of California (California Public Resources Code [PRC], section 21084.1, California Code of Regulations Title 14, section 15064.5).

Appendix G of the *State CEQA Guidelines* (California Code of Regulations Title 14, Chapter 3) provides an Environmental Checklist of questions including a single question related to paleontological resources (Section VII.f) as follows: “Would the project directly or indirectly destroy a unique paleontological resource or site...?”

CEQA does not define “a unique paleontological resource or site.” However, the Society of Vertebrate Paleontology (SVP) has defined a “significant paleontological resource” in the context of environmental review. The SVP defines a Significant Paleontological Resource as:

Fossils and fossiliferous deposits, here defined as consisting of identifiable vertebrate fossils, large or small, uncommon invertebrate, plant, and trace fossils, and other data that provide taphonomic, taxonomic, phylogenetic, paleoecologic, stratigraphic, and/or biochronologic information. Paleontological resources are considered to be older than recorded human history and/or older than middle Holocene (i.e., older than about 5,000 radiocarbon years) [p. 11] (SVP 2010).

The loss of significant paleontological resources would be a significant impact under CEQA. The CEQA lead agency is responsible for ensuring that paleontological resources are protected in compliance with CEQA and other applicable statutes.

2.1.2 California Public Resources Code

Section 5097.5 of the Public Resources Code states:

No person shall knowingly and willfully excavate upon, or remove, destroy, injure or deface any historic or prehistoric ruins, burial grounds, archaeological or vertebrate paleontological site, including fossilized footprints, inscriptions made by human agency, or any other archaeological, paleontological or historical feature, situated on public lands, except with the express permission of the public agency having jurisdiction over such lands. Violation of this section is a misdemeanor.

Here “public lands” means those owned by, or under the jurisdiction of, the state or any city, county, district, authority, or public corporation, or any agency thereof. Consequently, public agencies are required to comply with Public Resources Code Section 5097.5 for their own activities, including construction and maintenance, and for permit actions (e.g., encroachment permits) undertaken by others.

2.2 Local

2.2.1 City of Seaside

2004 Seaside General Plan

The City of Seaside addresses Paleontological Resources within the *Conservation and Open Space Element* of the currently adopted City of Seaside General Plan. In areas of known paleontological resources, the Community Development and Planning departments would be responsible to address the preservation of these resources when feasible. The *Conservation and Open Space Element* of the City of Seaside General Plan contains the following policy and implementation plans relating to paleontological resources that are relevant and/or applicable to the current Project:

Policy COS-5.1. Identify and conserve archeological, architectural, and historic resources within Seaside.

Implementation Plan COS-5.1.1 Assess and Mitigate Impacts to Cultural Resources. Continue to assess development proposals for potential impacts to sensitive historic, archaeological, and paleontological resources pursuant to the California Environmental Quality Act (CEQA).

Implementation Plan COS-5.1.1b. Assess development proposals for potential impacts to significant paleontological resources pursuant to of the California Environmental Quality Act Guidelines. If the project involves earthworks, the City may require a study conducted by a professional paleontologist to determine if paleontological assets are present, and if the project will significantly impact the resources. If significant impacts are identified, the City may require the project to be modified to avoid impacting the paleontological materials, or require mitigation measures to mitigate the impacts.

Draft Seaside 2040

Draft Seaside 2040, currently available for public review, briefly mentions Paleontological Resources in *Chapter 7: Parks, Open Space, and Conservation*; however, goals or policies regarding the protection of these resources are not provided.

2.2.2 City of Monterey

The City of Monterey does not specifically address paleontological resources in the Monterey General Plan.

2.2.3 City of Marina

The City of Marina does not specifically address paleontological resources in the Marina General Plan.

2.2.4 City of Del Rey Oaks

The City of Del Rey Oaks does not specifically address paleontological resources in the Del Rey Oaks General Plan.

2.2.5 Fort Ord Reuse Authority

The Fort Ord Reuse Authority does not specifically address paleontological resources in the Fort Ord Base Reuse Plan.

2.2.6 County of Monterey

Monterey County addresses Paleontological Resources within the *Conservation and Open Space Element* of the Monterey County General Plan (Policies 7.1-7.5). In areas of known paleontological resources, the County is to address the preservation of these resources when feasible.

3 Resource Assessment Guidelines

Paleontological resources are limited, nonrenewable resources of scientific, cultural, and educational value and are afforded protection under CEQA. This assessment satisfies CEQA and Public Resource Code Section 5097.5 requirements, and follows guidelines and significance criteria specified by the SVP *Standard Procedures for the Assessment and Mitigation of Adverse Impacts to Paleontological Resources* (SVP 2010).

3.1 Paleontological Sensitivity

Paleontological sensitivity refers to the potential for a geologic unit to produce scientifically significant fossils. Direct impacts to paleontological resources occur when earthwork activities, such as grading or trenching, cut into geologic deposits (e.g., formations) within which fossils are buried and physically destroy the fossils. Because fossils are the remains of prehistoric animal and plant life, they are nonrenewable. Such impacts have the potential to be significant and, under CEQA guidelines, may require mitigation.

Significant paleontological resources are fossils or assemblages of fossils that are unique, unusual, rare, diagnostically important, or are common but have the potential to provide valuable scientific information for evaluating evolutionary patterns and processes, or which could improve our understanding of paleochronology, paleoecology, paleophylogeography, or depositional histories. New or unique specimens can provide new insights into evolutionary history; however, additional specimens of even well-represented lineages can be equally important for studying evolutionary pattern and process, evolutionary rates, and paleophylogeography. Even unidentifiable material can provide useful data for dating geologic units if radiocarbon dating is possible. As such, common fossils (especially vertebrates) may be scientifically important, and therefore considered significant.

Paleontological sensitivity is determined by rock type, history of the geologic unit in producing significant fossils, and previously recorded fossil localities from that unit. Paleontological sensitivity is derived from the known fossil data collected from the entire geologic unit, not just from any one specific survey. The SVP system outlined in the SVP *Standard Procedures for the Assessment and Mitigation of Adverse Impacts to Paleontological Resources* is the generally accepted paleontological sensitivity classification scheme for projects on non-federal lands in California. Rincon has characterized the paleontological sensitivity for the proposed project according to the SVP procedures, as described below.

The SVP describes sedimentary rock units as having high, low, undetermined, or no potential for containing significant nonrenewable paleontological resources. This criterion is based on rock units within which vertebrate or significant invertebrate fossils have been determined by previous studies to be present or likely to be present. The SVP sensitivity categories are:

- I. **High Potential.** Rock units from which vertebrate or significant invertebrate, plant, or trace fossils have been recovered are considered to have a high potential for containing additional significant paleontological resources. Rocks units classified as having high potential for producing paleontological resources include, but are not limited to, sedimentary formations and some volcanoclastic formations (e. g., ashes or tephra), and some low-grade metamorphic rocks which contain significant paleontological resources anywhere within their geographical extent, and sedimentary rock units temporally or lithologically suitable for the preservation of fossils (e. g., middle Holocene and older, fine-grained fluvial sandstones, argillaceous and carbonate-rich paleosols, cross-bedded point bar

sandstones, fine-grained marine sandstones). Paleontological potential consists of both (a) the potential for yielding abundant or significant vertebrate fossils or for yielding a few significant fossils, large or small, vertebrate, invertebrate, plant, or trace fossils and (b) the importance of recovered evidence for new and significant taxonomic, phylogenetic, paleoecologic, taphonomic, biochronologic, or stratigraphic data. Rock units which contain potentially datable organic remains older than late Holocene, including deposits associated with animal nests or middens, and rock units which may contain new vertebrate deposits, traces, or trackways are also classified as having high potential.

- II. Undetermined Potential.** Rock units for which little information is available concerning their paleontological content, geologic age, and depositional environment are considered to have undetermined potential. Further study is necessary to determine if these rock units have high or low potential to contain significant paleontological resources. A field survey by a qualified professional paleontologist to specifically determine the paleontological resource potential of these rock units is required before a paleontological resource impact mitigation program can be developed. In cases where no subsurface data are available, paleontological potential can sometimes be determined by strategically located excavations into subsurface stratigraphy.
- III. Low Potential.** Reports in the paleontological literature or field surveys by a qualified professional paleontologist may allow determination that some rock units have low potential for yielding significant fossils. Such rock units will be poorly represented by fossil specimens in institutional collections, or based on general scientific consensus only preserve fossils in rare circumstances and the presence of fossils is the exception not the rule, e. g. basalt flows or Recent colluvium. Rock units with low potential typically will not require impact mitigation measures to protect fossils.
- IV. No Potential.** Some rock units have no potential to contain significant paleontological resources, for instance high-grade metamorphic rocks (such as gneisses and schists) and plutonic igneous rocks (such as granites and diorites). Rock units with no potential require no protection or impact mitigation measures relative to paleontological resources.

4 Methods

Paleontological resources are not found in “soil” but are contained within the geologic deposits or bedrock that underlies the soil layer. Therefore, to determine whether a given project has the potential to contain significant fossil resources at the subsurface, it is necessary to review relevant scientific literature to determine the geology and stratigraphy of the area. For this assessment, published geologic maps, fossil locality data, and literature were reviewed to identify the geologic units present at and below the surface within the project boundary, assess the paleontological sensitivity of the geologic units identified, and to determine the potential impacts to non-renewable paleontological resources from project development.

A formal paleontological locality search was requested at the Natural History Museum of Los Angeles County (NHMLAC) on January 31, 2019. In addition, Rincon reviewed the online paleontological collections database of the University of California Museum of Paleontology (UCMP) to identify known fossil localities in Monterey County from geologic formations similar to those identified in the project corridor.

Following the paleontological inventory and assessment, the paleontological sensitivity ratings of the geological units were assigned based on the findings of the record search and literature review. Based on the paleontological sensitivity findings, the potential impact to nonrenewable paleontological resources from project development was determined in accordance with the professional standards of the SVP (2010).

5 Description of Resources

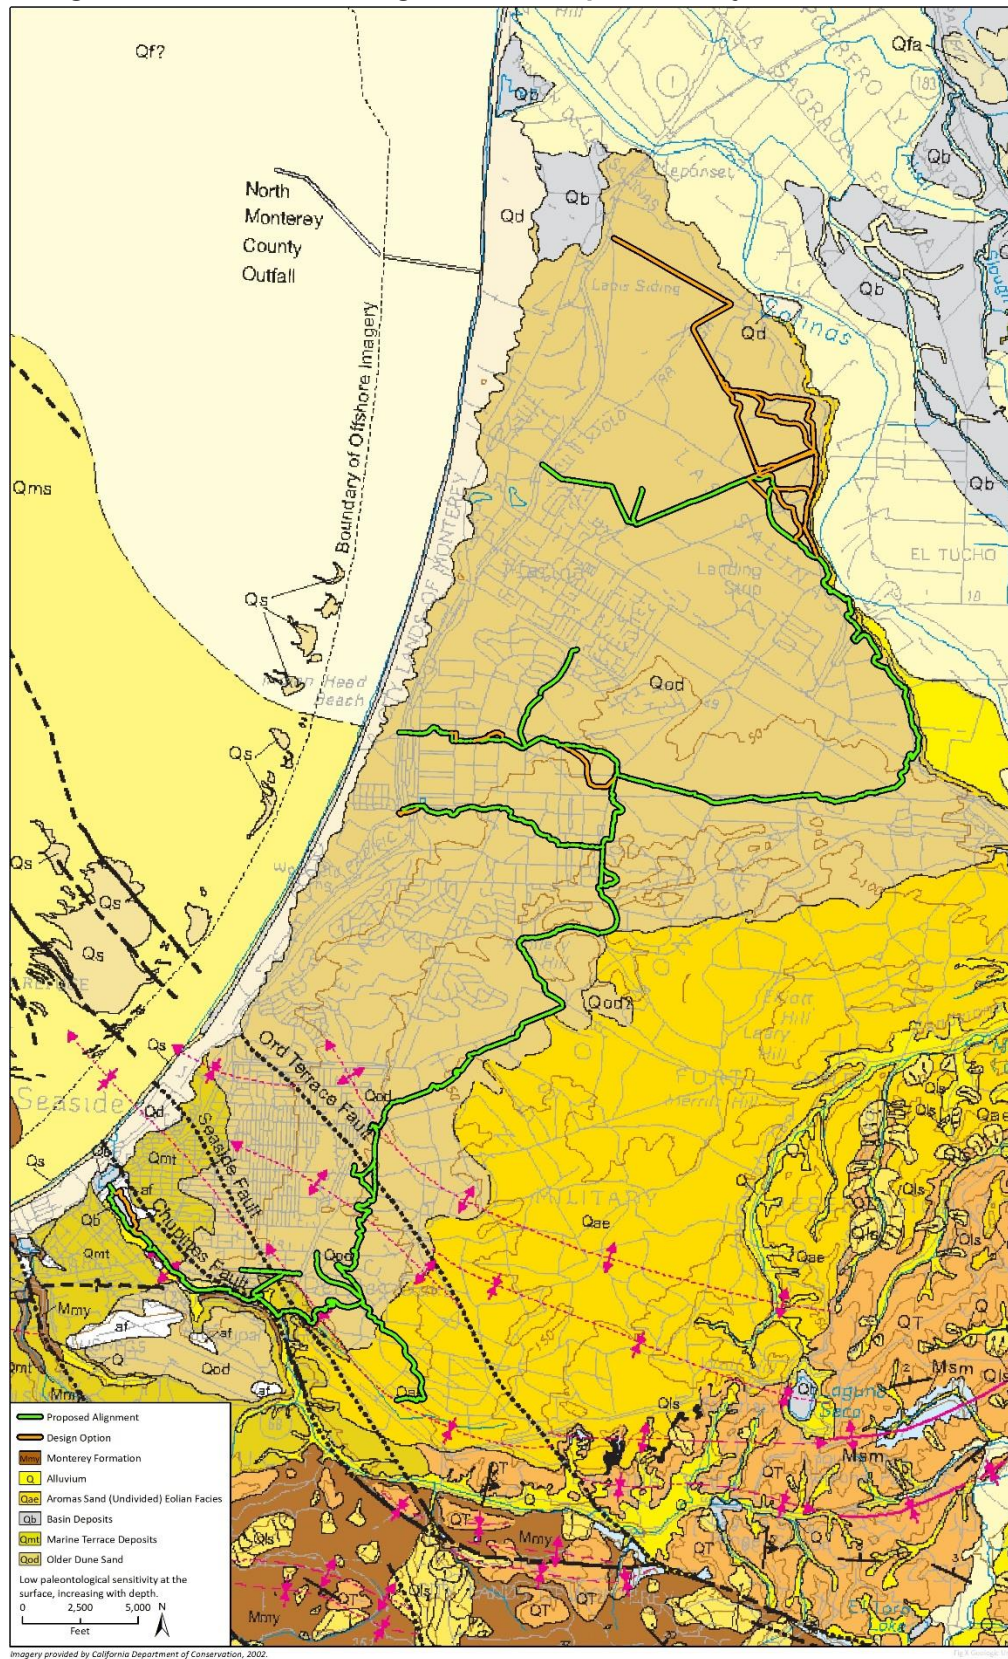

5.1 Regional Geology

The project corridor is situated within the Coast Ranges, one of eleven major geomorphic provinces in California (California Geological Survey 2002). A geomorphic province is a region of unique topography and geology that is readily distinguished from other regions based on its landforms and diastrophic history. The Coast Ranges extend about 600 miles from the Oregon border south to the Santa Ynez River in Santa Barbara County and are characterized by numerous north-south-trending peaks and valleys that range in elevation from approximately 500 feet above mean sea level (amsl) to 7,581 feet amsl at the highest summit. The basement rocks of the Coast Ranges include the Jurassic to Cretaceous rocks of the Franciscan Assemblage, which consist of over 55,000 feet of greywacke, greenstone, bluestone, metasedimentary rocks, and ophiolite sequences. During the Mesozoic and into the Cenozoic, the area of the present-day Coast Ranges was covered by marine waters, resulting in the thick accumulation of marine and nonmarine shale, sandstone, and conglomerate on the Franciscan basement rock (Bartow and Nilsen 1990). Later, these deposits were unconformably overlain by Paleocene to Pliocene continental shelf marine sedimentary rocks (Barron 1989). During the Late Miocene to the Late Pliocene, a mountain-building episode occurred in the vicinity of the present-day Coast Ranges, resulting in their uplift above sea level. Subsequently, from the Late Pliocene to Pleistocene, extensive deposits of terrestrial material, including alluvial fans and fluvial sediments, were deposited in the Coast Ranges (Norris and Webb 1990). Ongoing tectonic deformation and sea level change related to Pleistocene climate fluctuations continued through the Quaternary Period, resulting in the formation of marine terrace platforms along the Coast Ranges, including Monterey Bay (Jefferson et al. 1991). The project corridor is situated within a tectonically active region on the southern edge of Monterey Bay, east of the Monterey Peninsula and north of the Sierra de Salinas mountain range. Nearby faults include the Monterey Bay-Tularcitos fault zone, San Andreas fault zone approximately 20 miles northwest, and Sur-Nacimiento fault zone approximately 5 miles southwest (Clark et al. 1974).

5.1.1 Geology and Paleontology of the Project Corridor

The project corridor includes four (4) geologic units mapped at ground surface by Wagner et al. (2002): older Quaternary (Pleistocene) dune sand (Qod), the Aromas Sand (Qae), and younger Quaternary (Holocene) alluvium and basin deposits (Q, Qb) (Figure 3). Older Quaternary dune sand deposits (Qod) and Aromas Sands (Qae) underlie the majority of the surficial geology of the project corridor. These sediments date to the late Holocene or early Pleistocene, and consist of weakly-consolidated, well-sorted, wind-blown sand that has been stabilized through erosional action and soil formation (Dupre and Tinsley 1980). Because of the age of these aeolian sediments, it is possible they can preserve fossil resources, particularly at depth. Quaternary surficial deposits (Q, Qb) of Holocene age are exposed along drainages between terrace platforms along the southwestern portion of the project corridor. The Quaternary surficial deposits are composed of unconsolidated, poorly sorted clay, silt, sand, and gravel deposited in stream channels, flood basins, slopes, and coastal dunes (Clark et al. 1997). No previously recorded fossils have been documented in Quaternary surficial deposits in the vicinity of the project corridor.

Figure 3 Geologic Units and Paleontological Sensitivity in the Project Corridor¹

Holocene-age alluvial deposits, particularly those younger than 5,000 years old, are generally too young to contain fossilized material, but they may overlie sensitive older deposits (i.e., Pleistocene marine terrace deposits and the Miocene Monterey Formation) at an unknown depth.

Although not mapped within the project corridor, it is important to note the adjacent bluff exposures of the Miocene Monterey Formation (Mmy) and Pleistocene marine terrace deposits (Qmt) mapped extensively near the southwestern portion of the project corridor (Clark et al. 1997). Pleistocene marine terrace deposits consist of marine sediments and terrestrial alluvium that accumulated on a series of wave-cut platforms formed during late Pleistocene (Clark 1981). Pleistocene terrace deposits have a record of vertebrate fossil preservation in coastal California and have yielded scientifically significant specimens from multiple localities. In central coastal California, Pleistocene marine terrace deposits have yielded vertebrate fossil specimens of camel, horse, ground sloth, whale, and dolphin, shark, and fish (Jefferson et al. 1991; Woodring et al. 1946). The Monterey Formation, also mapped adjacent to the southwestern project corridor, is well exposed along coastal California from San Francisco south to Los Angeles. These Miocene deposits are typically recognized by its pale buff to white fine-grained deposits, dark brown to black siliceous laminations, and common fossils (Berndmeyer et al. 2012). Numerous vertebrate localities have been documented from the Monterey Formation, which yielded specimens of large sea turtles, whale, dolphins, sea lions, shark bones and teeth, sea cows, desmostylians, fish, birds, and many other fauna (Bramlette 1946; Harden 1998; Koch et al. 2004)

5.2 Locality Record Search Results

A search of the paleontological locality records at the NHMLAC resulted in no previously recorded fossil localities within the project boundary; however, at least two vertebrate localities (LACM 4069 and 384) were identified within older Quaternary aeolian deposits and late Miocene Monterey Formation in the general vicinity of the project. The closest vertebrate locality, LACM 4069, produced fossil specimens of horse (*Equus*), pronghorn antelope (*Antilocapridae*), and deer (*Cervidae*) north-northeast of the project in the San Benito River Valley. LACM (CIT) 384, located south-southwest of the project in the hills on the northern side of Carmel Valley, yielded fossil specimens of snake mackerel (*Thyrsoctes kriegeri*) recovered from deposits of the Monterey Formation (McLeod 2019).

A supplemental review of the museum records maintained in the UCMP online collections database did not indicate any vertebrate fossil localities in the immediate vicinity of the project corridor. The closest UCMP vertebrate locality on record is V6279, which yielded pinniped (seal) limb bone fragments from the Miocene Monterey Formation approximately four miles south-southwest of the project corridor (UCMP 2019).

6 Evaluation, Impacts, and Recommendations

6.1 Paleontological Sensitivity Evaluation

Based on the literature review and records search results, the paleontological sensitivity of the geologic units underlying the project corridor were determined in accordance with criteria set forth by the SVP (2010). Holocene sedimentary deposits, particularly those younger than 5,000 years old, are generally too young to contain fossilized material. Therefore, the Holocene alluvial and basin (Q, Qb) and deposits mapped in the project corridor have been assigned a low paleontological sensitivity. Older Quaternary (Pleistocene) aeolian sediments (Qod, Qae) have the potential to contain buried intact paleontological resources at moderate depths because the unit has proven to yield significant vertebrate fossils near the project corridor (McLeod 2019; UCMP 2019). Consequently, these wind-blown sediments are assigned a low paleontological sensitivity at the surface, increasing to a high paleontological sensitivity with depth. The Miocene Monterey Formation (Mmy) and Pleistocene marine terrace deposits (Qmt), which may underlie the project corridor at depth, are assigned a high paleontological sensitivity due to their potential to preserve scientifically significant fossils.

6.2 Impacts

Paleontological resources are nonrenewable and are vulnerable to impacts from development related activities. Fossils provide important information for our understanding of past environments, the history of life, past species diversity, how species respond to climate change, and many other lines of scientific inquiry. Impacts to fossils and fossil localities, and loss of fossils from looting or other destructive activity at fossil sites results in the direct loss of scientific data and directly impacts the ability to conduct scientific research on evolutionary patterns and geological processes. Construction and grading activities associated with any development that will impact previously undisturbed, paleontologically sensitive geologic deposits have the potential for the destruction of significant paleontological resources.

The surficial geology of the project corridor has a low paleontological sensitivity, but increases with depth. Particularly, the geologic deposits of Pleistocene age underlying portions of every segment of the project corridor (i.e., Qod, Qae) have a high potential to contain paleontological resources at depth. Consequently, extensive ground disturbing activities within intact deposits underlying the project corridor could potentially result in significant impacts to paleontological resources under Appendix G of CEQA. Impacts would be significant if construction activities result in the destruction, damage, or loss of scientifically important paleontological resources and associated stratigraphic and paleontological data. As currently proposed, the majority of project ground disturbance would not exceed 12 inches below ground surface for the project corridor. Such minimal ground disturbance (i.e., shallow excavations) within intact (native) deposits would not likely cause significant impacts to paleontological resources. However, ground disturbing activities for the proposed overcrossings (i.e., bridges) and undercrossings (i.e., tunnels) along the Northern Loop, Canyon Del Rey/SR 218, and CSUMB Loop North segments and the footings for the raised pathway along the Canyon Del Rey/SR 218 segment would require extensive excavations within intact Pleistocene deposits underlying the project corridor, which could potentially result in significant impacts to paleontological resources.

6.3 Recommendations

The following recommended mitigation would address the potentially significant impacts relating to the potential discovery of paleontological resources during project implementation. These measures would only apply to project construction for the proposed overcrossings and undercrossings along the Northern Loop, Canyon Del Rey/SR 218, and CSUMB Loop North segments and raised pathway along the Canyon Del Rey/SR 218 segment and would ensure that any significant fossils present on-site are preserved. Implementation of the following recommended mitigation measures would reduce potential project impacts to paleontological resources to a less than significant level pursuant to the requirements of CEQA.

- **Develop a Paleontological Resources Mitigation Plan.** Prior to the commencement of ground disturbing activities for overcrossings and undercrossings in the Northern Loop, Canyon Del Rey/SR 218, and CSUMB Loop North segments and the raised pathway along the Canyon Del Rey/SR 218 segment, a qualified professional paleontologist shall be retained to prepare and implement a Paleontological Resources Mitigation Plan (PRMP) for the project. A Qualified Paleontologist is an individual who meets the education and professional experience standards as set forth by the SVP (2010), which recommends the paleontologist shall have at least a Master's Degree or equivalent work experience in paleontology, shall have knowledge of the local paleontology, and shall be familiar with paleontological procedures and techniques. The PRMP shall describe mitigation recommendations in detail, including paleontological monitoring procedures; communication protocols to be followed in the event that an unanticipated fossil discovery is made during project development; and preparation, curation, and reporting requirements.
- **Paleontological Worker Environmental Awareness Program (WEAP).** Prior to the start of construction, the Qualified Paleontologist or his or her designee, shall conduct training for construction personnel regarding the appearance of fossils and the procedures for notifying paleontological staff should fossils be discovered by construction staff. The WEAP shall be fulfilled at the time of a preconstruction meeting. In the event a fossil is discovered by construction personnel anywhere in the project area, all work in the immediate vicinity of the find shall cease and a qualified paleontologist shall be contacted to evaluate the find before re-starting work in the area. If it is determined that the fossil(s) is (are) scientifically significant, the qualified paleontologist shall complete the mitigation outlined below to mitigate impacts to significant fossil resources.
- **Paleontological Monitoring.** Initially, full-time monitoring shall be conducted during ground construction activities (i.e., grading, trenching, foundation work, and other excavations) where ground disturbance exceeds ten feet below ground surface within deposits of Older Quaternary dune sand (Qod) and Aromas Sand (Qae). Monitoring shall be conducted by a qualified paleontological monitor, who is defined as an individual who meets the minimum qualifications per standards set forth by the SVP (2010), which includes a B.S. or B.A. degree in geology or paleontology with one year of monitoring experience and knowledge of collection and salvage of paleontological resources. The duration and timing of the monitoring shall be determined by the Qualified Paleontologist and the location and extent of proposed ground disturbance. If the Qualified Paleontologist determines that full-time monitoring is no longer warranted, based on the specific geologic conditions at the surface or at depth, the Qualified Paleontologist may recommend that monitoring be reduced to periodic spot-checking or cease entirely.
- **Fossil Discovery, Preparation, and Curation.** If a paleontological resource is discovered, the monitor shall have the authority to temporarily divert the construction equipment around the find until it is assessed for scientific significance and collected. Typically, fossils can be safely salvaged quickly by a single paleontologist and not disrupt construction activity. In some cases, larger fossils (such as complete skeletons or large mammals) require more extensive excavation and longer salvage periods. In this case,

the paleontologist should have the authority to temporarily direct, divert or halt construction activity to ensure that the fossil(s) can be removed in a safe and timely manner.

Once salvaged, significant fossils shall be identified to the lowest possible taxonomic level, prepared to a curation-ready condition and curated in a scientific institution with a permanent paleontological collection (such as the UCMP) along with all pertinent field notes, photos, data, and maps. The cost of curation is assessed by the repository and is the responsibility of the project owner.

- **Final Paleontological Mitigation Report.** At the conclusion of laboratory work and museum curation, a final report shall be prepared describing the results of the paleontological mitigation monitoring efforts associated with the project. The report shall include a summary of the field and laboratory methods, an overview of the project geology and paleontology, a list of taxa recovered (if any), an analysis of fossils recovered (if any) and their scientific significance, and recommendations. The final report shall be submitted to the implementing entity. If the monitoring efforts produced fossils, then a copy of the report shall also be submitted to the designated museum repository.

**Subject: Phase I Environmental Site Assessment
Fort Ord Regional Trail and Greenway
Monterey County, California**

Dear Mr. Deal:

This report presents the findings of a Phase I Environmental Site Assessment (ESA) completed by Rincon Consultants, Inc. for the Fort Ord Regional Trail and Greenway (FORTAG) in Monterey County, California. The Phase I ESA was performed in accordance with our contract dated September 17, 2018.

The accompanying report presents our findings and provides an opinion regarding the presence of recognized environmental conditions. Our scope of services did not include any inquiries with respect to asbestos, lead-based paint, lead in drinking water, wetlands, regulatory compliance, cultural and historic resources, industrial hygiene, health and safety, ecological resources, endangered species, vapor intrusion or other indoor air quality, mold, or high voltage power lines.

Thank you for selecting Rincon for this project. If you have any questions, or if we can be of any future assistance, please contact us.

Sincerely,
Rincon Consultants, Inc.

Introduction

This report presents the findings of a Phase I Environmental Site Assessment (ESA) for the Fort Ord Regional Trail and Greenway (FORTAG) in Monterey County, California (Figure 1, Vicinity Map). The Phase I ESA was performed by Rincon Consultants, Inc. (Rincon) for the Transportation Agency for Monterey County (TAMC) in general conformance with the American Society for Testing and Materials (ASTM) E1527-13 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process. Because of the nature of the project, no user and owner parcel questionnaires were conducted as part of this assessment. The following sections present our findings and provide our opinion as to the presence of recognized environmental conditions (RECs) along and in the vicinity of the proposed alignment. This assessment includes evaluations of both the proposed alignment and design options.

Purpose

The purpose of this Phase I ESA is to identify RECs along and in the vicinity of the proposed trail alignment that could affect trail construction and future trail users.

Scope of Services

The scope of services conducted during this study is outlined below:

- Performed a reconnaissance of the proposed alignment to identify obvious indicators of the existence of hazardous materials.
- Observed adjacent or nearby properties from public thoroughfares to see if such properties are likely to use, store, generate, or dispose of hazardous materials.
- Obtained and reviewed an environmental records database search to obtain information about the potential for hazardous materials to exist along the proposed alignment or at properties located in the vicinity of the proposed alignment.
- Reviewed files for properties along the proposed alignment and immediately adjacent properties as identified in the database report, as applicable.
- Reviewed the current U.S. Geological Survey (USGS) topographic map to obtain information along the proposed alignment and regional topography and uses of the properties along the proposed alignment and surrounding sites.
- Reviewed additional pertinent record sources (e.g., California Division of Oil and Gas records, online databases of hazardous substance release sites), as necessary, to identify the presence of RECs along and in the vicinity of the proposed alignment.
- Reviewed the National Pipeline Mapping System database for adjacent and nearby natural gas and hazardous materials pipelines.
- Reviewed reasonably ascertainable historical resources (e.g., aerial photographs, topographic maps) to assess the historical land use of properties along the proposed alignment and adjacent properties.

Significant Assumptions, Limitations, Deviations, Exceptions, Special Terms, and Conditions

This work is intended to adhere to good commercial, customary, and generally accepted environmental investigation practices for similar investigations conducted at this time and in this geographic area. No guarantee or warranties, expressed or implied are provided. The findings and opinions conveyed in this report are based on findings derived from a site reconnaissance, review of an environmental database report, specified regulatory records and historical sources, and comments made by interviewees. This report is not intended as a comprehensive site characterization and should not be construed as such. Standard data sources relied upon during the completion of this study may vary in accuracy and completeness. Although Rincon believes the data sources are reasonably reliable, Rincon cannot and does not guarantee the authenticity or reliability of the data sources it has used. Additionally, pursuant to our contract, the data sources reviewed included only those that are practically reviewable without the need for extraordinary research.

Project Description

The proposed alignment includes approximately 28 miles of new paved trails. In most places, the trail will be approximately 12 feet wide, narrowed down to 8 feet wide in some areas. The proposed alignment connects the cities of Marina, Seaside, Del Rey Oaks, Monterey and unincorporated areas of the county (Figure 1, Vicinity Map).

Records Review

Physical Setting Sources

The entire proposed alignment is located within the Coast Ranges Geomorphic Province (California Geological Survey [CGS] Note 36, 2002). The Coast Ranges are northwest-trending mountain ranges (2,000 to 4,000, occasionally 6,000 feet elevation above sea level), and valleys. The ranges and valleys trend northwest, subparallel to the San Andreas Fault. Strata dip beneath alluvium of the Great Valley. To the west is the Pacific Ocean. The coastline is uplifted, terraced and wave-cut. The Coast Ranges are composed of a variety of Mesozoic and Cenozoic lithologies. The northern and southern ranges are separated by a depression containing the San Francisco Bay. The northern Coast Ranges are dominated by irregular, knobby, landslide-topography of the Franciscan Complex. The eastern border is characterized by strike-ridges and valleys in Upper Mesozoic strata. In several areas, Franciscan rocks are overlain by volcanic cones and flows of the Quien Sabe, Sonoma and Clear Lake volcanic fields. The Coast Ranges are subparallel to the active San Andreas Fault. The San Andreas is more than 600 miles long, extending from Pt. Arena to the Gulf of California. West of the San Andreas is the Salinian Block, a granitic core extending from the southern extremity of the Coast Ranges to the north of the Farallon Islands (CGS, 2002).

The entire proposed alignment is located within the Salinas Valley groundwater basin.

Standard Environmental Record Sources

EDR was contracted to provide a database search of public lists of sites that generate, store, treat or dispose of hazardous materials or sites for which a release or incident has occurred. The EDR search was conducted for the proposed alignment and included data from surrounding sites within specified radii of the property. A copy of the EDR report, which specifies the ASTM search distance for each public list, is included as Appendix B. As shown on the attached EDR report, federal, state and county lists were reviewed as part of the research effort. In addition, an extra half-mile search from the proposed alignment was conducted to account for any proposed alignment changes. Please refer to Appendix B for a complete listing of sites reported by EDR and a description of the databases reviewed.

The Map Findings Summary, included in the EDR report, provides a summary of the databases searched, the number of reported facilities within the search radii, and whether the facility is located onsite or adjacent to the proposed alignment, as shown in Figures 2-7. The following information is based on our review of the Map Findings Summary and the information contained in the EDR report.

Proposed Alignment and Offsite Properties

The proposed alignment and offsite properties listed by EDR fall under two general categories of databases: those reporting unauthorized releases of hazardous substances (e.g., LUST, National Priority List [a.k.a. Superfund sites], and corrective action facilities), and databases of businesses

permitted to use hazardous materials or generate hazardous wastes, for which an unauthorized release has not been reported to a regulatory agency.

Rincon reviewed the EDR Radius Map and select detailed listings to evaluate their potential to impact the proposed alignment, based on the following factors:

- The reported distance of the facility from the proposed alignment
- The nature of the database on which the facility is listed, and/or whether the facility was listed on a database reporting unauthorized releases of hazardous materials, petroleum products, or hazardous wastes
- The reported case type (e.g., soil only, failed UST test only)
- The reported substance released (e.g., chlorinated solvents, gasoline, metals)
- The reported regulatory agency status (e.g., case closed, “no further action”)
- The location of the facility with respect to the reported groundwater flow direction (discussed in the Geology and Hydrogeology section of this report)

Facilities/properties that were interpreted by Rincon to be of potential environmental concern to the proposed alignment, based on one or more of the factors listed above, are summarized in Tables 1.1 through 1.7, by segment. Per ASTM, contamination migration pathways in soil, groundwater, and soil vapor were considered in our analysis of offsite properties of potential environmental concern. Database definitions can be found in the attached EDR report.

Proposed Alignment					
Fort Ord Military Reservation	Regional	Former Army Base Fort Ord	Proposed Alignment	DOD	Military Reservation closed.
				NPL, SEMS, CORRACTS, ROD, PRP	Elevated levels of contaminants, including tetrachloroethylene (PCE), carbon tetrachloride, trichloroethylene (TCE), 1,1,1-trichloroethane and trans-1,2-dichloroethylene, detected in off-base groundwater and reported to be coming from the Army base. The exact location of the source not identified. Current human exposure is not under control. Soil and groundwater contaminated in the Fire Drill Area from the release of approximately 600 gallons of petroleum products. Fort Ord participating in the Department of Defense Installation Restoration Program (IRP) to identify, investigate and clean up contamination from hazardous materials. Currently on the Final NPL.
				RCRA-TSDF, RCRA-LQG	Property engages in treatment, storage or disposal of hazardous waste (large quantity generator)
				US ENG CONTROLS	Engineering controls include soil disposal, soil excavation, bioremediation treatment of soil/groundwater, soil recycling, ex-situ soil vapor extraction, temporary storage of soil, carbon adsorption of groundwater, discharge of groundwater, groundwater monitoring, groundwater reinjection, capping of soil, capping of solid waste, groundwater extraction, pumping and treatment of groundwater, reuse of groundwater as process water, excavation of solid waste, solid waste recycling, soil revegetation, open burn/detonation of solid waste, natural attenuation of groundwater.
				US INST CONTROLS	Covenant, water supply use restriction, deed restriction, re-use regulations, deed notices for contaminated groundwater. Deed restriction, building, demolition or excavation regulation, state notices for contaminated soil. A deed restriction, building, demolition or excavation regulation, zoning regulation for solid waste.
Fort Ord – Fort Ord OU1 (Off-Site Plume)	I58	Monterey, California	Proposed Alignment	MCS, CERS	This property is the Firtzsche Army Airfield Fire Drill Area. Contaminated soil has been remediated. Contamination still present in groundwater. “Open – Remediation” status as of February 2010.
Del Monte Boulevard and Beach Road	Orphan	Del Monte Boulevard and Beach Road	Proposed Alignment	NPDES	Construction permit expired as of March 2017.
Adjacent Properties					
MRWPCA Regional Treatment Plant/Water Cogeneration Facility/Water Poll Cont.	784, BE381-BE387, Orphan	14811 Del Monte Boulevard, Marina	Adjacent Property – East	LUST, CERS TANKS	Release of gasoline from overfilling UST in January 1992. Impacted soil was reported to have been removed and disposed. Case closed as of March 1993. No additional information provided.
				AST, HIST CORTESE, UST, EMI, FINDS	No pertinent information provided.
				CHMIRS	Release of liquid chlorine in August 2012 – contained. No cleanup required.
				CERS	United States Environmental Protection Agency (EPA) Emission Inventory System
				NPDES	Active construction permit as of March 2018.
				CIWQS	Active storm water construction; storm water construction permit terminated as of November 1998.
				ERNS	Release of approximately one million gallons of raw sewage into the ocean caused by equipment failure in January 2018.
				CUPA Monterey, WDS	Waste oil, non-chlorinated safety solvents used for sewage treatment.
Pure Water Monterey	172			WDR	Active.
				CIWQS	Active permit.
				CERS	No pertinent information provided.

***Bold** databases names indicate reported unauthorized releases
***Bold** site names indicate sites with the potential to impact the proposed alignment

Regulatory agency information reviewed for the listings interpreted to have the potential to impact the proposed alignment are summarized in the Additional Environmental Record Sources section of this report.

Orphan Listings

EDR reported 206 orphan or unmapped site listings, which EDR was unable to plot due to insufficient address information. Based on our review, the orphan listed properties interpreted to have the potential to impact the proposed alignment were included in the tables above.

Additional Environmental Record Sources

Review of Agency Files

As a follow-up to the database search, Rincon reviewed regulatory information for facilities within the specified search radii that were interpreted to have the potential to impact the proposed alignment, based on one or more factors previously discussed (e.g., distance, open case status, upgradient location, soil vapor migration).

The following is a summary of our review of regulatory information obtained from review of online sources (e.g., SWRCB GeoTracker database, DTSC EnviroStor database) and/or files requested from the applicable regulatory agency, as described below. Copies of selected documents reviewed are included in Appendix B.

Proposed Alignment

The proposed alignment passes through several properties that are listed on databases searched by EDR. Several of those properties have the potential to impact the proposed alignment as follows:

- **Fort Ord Military Reservation** – Based on the former use of portions of the proposed alignment for military training purposes, soil and groundwater at this property have been impacted with various contaminants, including volatile organic compounds (VOCs), unexploded ordnances and munitions debris.
- **Fort Ord – OU1 (Off-Site Plume)** – This property is a portion of the former fire drill area. Contaminated soil has been remediated, but impacted groundwater remains onsite.
- **Fort Ord – Del Rey Oaks Development** – This property was listed as a Federal Superfund Site as a result of former firing range activities at the property. Explosives were listed as the potential contaminant of concern, possibly affecting the onsite soil.

Adjacent Properties

One adjacent property was interpreted to have the potential to impact the proposed alignment:

- **Del Rey Car Wash, Inc. at 810 Canyon Del Rey Road:** This property is located adjacent to the northeast of the Canyon Del Rey/SR 218 Segment and is identified as an unauthorized release site. According to the records reviewed, a release of gasoline impacted soil and groundwater at the property in September 1999. The case was closed in December 2013. Based on the limited residual soil and groundwater contamination reported, this property is not expected to impact the proposed alignment.

Upgradient Release Sites

One upgradient release site was interpreted to have the potential to impact the proposed alignment:

- **Shell Service Station/Starks Shell Service at 1083 Fremont Boulevard:** This property is located approximately 325 feet northeast of the Canyon Del Rey/SR 218 Segment and is identified as a release site. According to the records reviewed, a release of gasoline impacted groundwater at the property in December 1985. The case was closed in September 1997. No additional information regarding the extent of contamination was available. However, based on the distance from the proposed alignment and the depth to groundwater, this property is not expected to impact the proposed alignment.

Known or Suspect Contaminated Release Sites with Potential Vapor Migration

The EDR report was reviewed to identify nearby known or suspect contaminated sites that have the potential for contaminated vapor originating from the nearby site to be migrating beneath the proposed alignment. Based on the ASTM E 2600-15, *Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions*, the following minimum search distances were initially used to determine if contaminated soil vapors from a nearby known or suspect contaminated site have the potential to be migrating beneath the proposed alignment:

- 1/10 mile (528 feet) for petroleum hydrocarbons
- 1/3 mile (1,760 feet) for other contaminants of concern (COCs)

If upgradient known or suspect contaminated sites are located within the above-referenced distances from the proposed alignment, online resources are reviewed to determine the extent of the contaminated plume at those sites. The following describes search distances for contaminated plumes of petroleum hydrocarbons and other COCs.

Petroleum Hydrocarbons

Based on our review of the EDR report information as indicated above, there is one known petroleum hydrocarbon-contaminated site within 528 feet of the proposed alignment. However, because this property exceeds the 30-foot distance considered the critical distance wherein such migration may pose a threat to the proposed alignment, there are no potential threats to the proposed alignment posed by the potential migration of petroleum hydrocarbon vapors from listed sites.

In addition, several adjacent properties are reported to have onsite USTs. If unauthorized releases were to occur from these USTs, there would be a potential for soil vapor to be migrating beneath the proposed alignment.

Other COCs

Based on our review of the EDR report, elevated levels of various VOCs have been detected in off-base groundwater and reported to be coming from the Army base. Therefore, impacted soil vapor has the potential to be migrating beneath the Northern Marina Segment, CSUMB Loop North Segment, CSUMB Loop South Segment, Northern Loop Segment, National Monument Loop Segment and Canyon Del Rey/SR 218 Segment.

Review of State of California Division of Oil and Gas Records

A review of the Department of Conservation, Division of Oil, Gas & Geothermal Resources Online Mapping System was conducted. No oil or gas wells are located within one-quarter mile of the Northern Marina Segment, Northern Loop Segment, CSUMB Loop North Segment, CSUMB Loop South Segment, National Monument Loop Segment or Ryan Ranch Segment. One plugged, dry hole was identified within one-quarter mile of the Canyon Del Rey /SR 218 Segment as follows:

- API 0405301205 – plugged, dry hole – 0.18 mile north northwest of the eastern portion of the Canyon Del Rey/SR 218 Segment

Review of National Pipeline Mapping System Records

A review of the National Pipeline Mapping System (NPMS) online Public Map Viewer¹ indicates that one pipeline intersects the northwestern and southwestern edge of the Marina Segment, and is located adjacent to the north of the western edge of the CSUMB Loop North Segment as follows:

- Natural Gas Transmission Pipeline:
 - Operator: Pacific Gas & Electric Co.
 - Pipeline ID: 12411
 - Status: Active
 - Miles: 8.04

One pipeline intersects the southern portion of the Northern Loop Segment, portions of the CSUMB Loop North Segment, the western edge of the CSUMB Loop South Segment and the northwestern edge of the Canyon Del Rey /SR 218 Segment as follows:

- Natural Gas Transmission Pipeline:
 - Operator: Pacific Gas & Electric Co.
 - Pipeline ID: 8573
 - Status: Active
 - Miles: 14.96

Historical Use Information on the Property and the Adjoining Properties

The historical records review completed for this Phase I ESA includes aerial photographs and topographic maps as detailed in the following sections. Copies of the historical resources reviewed are included in Appendix C. Historical land uses of concern are bolded in the historical summaries below.

¹ <https://www.npms.phmsa.dot.gov/PublicViewer/>

Review of Historical Aerial Photographs

Aerial photographs from EDR's aerial photograph collection were obtained and reviewed. In addition, a current aerial from Google Earth was also reviewed.

Review of Historical Topographic Maps

Historical topographic maps from EDR's map collection were obtained and reviewed.

Other Historical Sources

Based on the historical information obtained, no additional historical sources were reviewed.

Summary of Historical Uses

Northern Marina Segment

- 1913 to 1941: Mostly vacant land with some unimproved roads; **Southern Pacific Railroad** to west; Salinas River to east.
- 1947 to 1948: Similar to previous usage, with the exception that the **Military Reservation** boundary is shown on the southeastern portion of the segment.
- 1949 to 1956: Similar to previous usage, with the exception that residences are visible near the western portion of the segment.
- 1968 to present: Adjacent **agricultural** use.
- 1968 to 1975: Similar to previous usage, with the exception that a Landing Strip is depicted to the southeast and an urban development is depicted at the southwestern portion. In addition, a paved road is now located along the northern portion of the segment.
- 1981: Portion of the landfill/water treatment plant to northeast is visible.
- 1983 to 1998: Similar to previous usage, with the exception that a **large disturbed surface** is located to the east of the Northern Marina Segment, in the **current landfill/water treatment plant location**.
- 2012: Marina Municipal Airport is depicted to the southeast.

Northern Loop Segment

- 1913: Mostly vacant land with some unimproved roads.
- 1937 to 1975: Similar to previous usage, with the exception that the alignment now passes through the **Fort Ord Military Reservation** with some paved roads.
- 1947 to 1949: Similar to previous usage, with the exception that the **Military Reservation** boundary is shown on the southeastern portion of the segment.
- 1956: Similar to previous usage, with the exception that the eastern adjacent properties are now used for **agricultural use** (through present day).
- 1971 to 1984: Similar to previous usage, with the exception that military structures are now depicted to the southwest of the segment.
- 1987 to 2016: Similar to previous usage, with the exception that disturbed surfaces are visible in the locations of the current residential developments on the southern portion of the segment.
- 1998 to present: **Agricultural use** visible near central portion of segment

CSUMB Loop North Segment

- 1913: Mostly vacant land with some unimproved roads; **Southern Pacific Railroad** to west through present day.
- 1937: Eastern portion is mostly vacant land with some unimproved roads. Western portion is not depicted on map.
- 1941 to 1984: Western portion of segment passes through **Camp Clayton Military Reservation** (current Outpatient Center and residential development). Remainder passes through **Fort Ord Military Reservation**.
- 1968 to present: Urban development depicted to the north.
- 1998 to present: Segment passes through portions of the CSUMB Campus.

CSUMB Loop South Segment

- 1913: Mostly vacant land with some unimproved roads; **Southern Pacific Railroad** to west through present day.
- 1941 to 1987: Western portion of segment passes through **Camp Clayton Military Reservation**. Remainder passes through **Fort Ord Military Reservation**. Numerous military structures, likely barracks, shown from 1968 to 1981. According to our research conducted, Camp Clayton is another name for Fort Ord.
- 1998 to present: Segment passes through portions of the CSUMB Campus.

National Monument Loop Segment

- 1913: Mostly vacant land with some unimproved roads.
- 1941: Entire segment passes through **Fort Ord Military Reservation**.
- 1947 to 1949: Similar to previous usage, with the exception that the segment now either passes through or is located adjacent to areas identified as Parker Flats, Artillery Hill, Welch Ridge and Grant Ewing Ridge. Few small buildings are located near segment in these areas in 1948.
- 1950: Only the southern portion of the segment depicted. Segment located in **Fort Ord Military Reservation**.
- 1956: Similar to 1947 to 1948 land use.
- 1968 to 2016: Similar to previous usage, with the exception that urban development is depicted to the west. Segment passes through old barracks, training areas.

Canyon Del Rey /SR 218 Segment

- 1913: Western portion in the area of Laguna Del Rey and **Southern Pacific Railroad**. Few structures and roads depicted. Eastern portion of segment is vacant land.
- 1941 to 1950: Similar to previous usage, with the exception that the western portion is more developed with structures and roads. Eastern portion is now identified as a part of the **Fort Ord Military Reservation**.
- 1956 to 1975: Similar to previous usage, with the exception that the western portion of the segment is now densely developed with residential and commercial land uses. In addition, since at least 1968, an Educational Service Center is now depicted to the southeast of the segment.
- 1983 to present: Similar to previous usage, with the exception that Peninsula Regional Park is now depicted to the north of the eastern portion of the segment.

Ryan Ranch Segment

- 1913: Vacant land with intermittent stream depicted.
- 1941: Segment now passes through **Fort Ord Military Reservation** with roads and intermittent streams.
- 1947 to 1987: Similar to previous usage, with the exception that a quarry is now depicted in the topographic maps. Possible training areas are visible in 1956.
- 1998 to present: Mostly vacant land with roads.

Interviews

Rincon performed interviews regarding the proposed alignment and surrounding areas. The purpose of the interviews was to discuss current and historical conditions and to obtain information indicating the presence of recognized environmental conditions in connection with the proposed alignment.

Interview with Owner

Because each property has a different owner, individual owners were not interviewed as part of this research effort.

Interview with Site Manager

A site manager was not identified to Rincon.

Interviews with Occupants

Because the proposed alignment does not pass through any onsite buildings, no occupants were interviewed as part of this research effort.

Interviews with Local Government Officials

Public records requests were submitted to Monterey County and the Central Coast Regional Water Quality Control Board (RWQCB) for several properties of concern. The RWQCB indicated that no records were available for the requested properties. As of the date of this report, no response had been received from Monterey County.

Site Reconnaissance

Rincon Consultants performed a reconnaissance of the proposed alignment from June 24, 2019 through June 28, 2019. The purpose of the reconnaissance was to observe existing proposed alignment conditions that may indicate the presence of hazardous materials onsite.

Methodology and Limiting Conditions

The site reconnaissance was conducted by:

1. Observing the proposed alignment from public thoroughfares
2. Observing the proposed alignment from driveways, dirt/paved roads, and walking paths

Because of the large size of the proposed alignment, the project corridor was divided into seven corridor segments. Rincon traveled via foot and vehicle along each corridor segment and observed the proposed alignment in a general south-to-north direction, starting with the Del Rey Oaks/SR 218 Segment.

Current Use of the Property and Adjacent Properties

The current uses of the FORTAG alignment and immediately adjacent properties are described below by segment.

Northern Marina Segment

The Marina Segment (north of Marina Municipal Airport) comprises vacant land and dirt roads connecting active grazing and strawberry fields to Del Monte Boulevard and Blanco Road. Adjacent businesses/properties include an elementary school, residences, a church, a community park, active grazing fields, **active strawberry fields**, a water treatment plant, **a regional landfill**, water retention basins, and an airport. **Railroad tracks** are present along Del Monte Boulevard and two natural gas pipelines are present along Del Monte Boulevard and along an unnamed roadway on the Monterey Regional Waste Management District property.

Northern Loop Segment

The Northern Loop Segment (east and south of the Marina Municipal Airport and along Blanco Road and Inter-Garrison Road) comprises paved and unpaved roadways, both abandoned and currently in use, as well as vacant land. Adjacent businesses/properties include the Marina Municipal Airport, **active strawberry fields**, the Salinas River, and residences. A natural gas pipeline is present along the project corridor between Engineer Equipment Road and Abrams Drive.

CSUMB Loop North Segment

The CSUMB North Segment (along 8th Street and California Avenue) comprises existing sidewalks along 8th Street and California Avenue, parking lots south and east of the Monterey Institute for Research in Astronomy, vacant land east of Imjin Road, and near several abandoned structures where the CSUMB North segment meets the CSUMB South and Northern Loop segments. Adjacent businesses/properties include residences, parking lots, abandoned U.S. Army barracks, and CSUMB

campus buildings. Two natural gas pipeline markers are present along California Avenue south of Imjin Road.

CSUMB Loop South Segment

The CSUMB South Segment (along 1st Street and Butler Street) comprises existing sidewalks along 1st Street, vacant land south of 1st Street, and existing sidewalks along Butler Street. Adjacent businesses/properties include abandoned U.S. Army barracks, CSUMB campus buildings, and parking lots. No hazardous materials pipelines were observed onsite.

National Monument Loop

The National Monument Loop Segment (east of General Jim Moore Boulevard) comprises paved and unpaved roadways and vacant land east of General Jim Moore Boulevard. Adjacent businesses/properties include vacant land, Fort Ord National Monument land, and parking lots. No hazardous materials pipelines were observed onsite.

Canyon Del Rey /SR 218 Segment

The Del Rey Oaks/218 Segment (along Highway 218) comprises existing walkways surrounding Laguna Grande, sidewalks along and adjacent to properties south of Highway 218, sidewalks and roadway easements along Plumas Avenue and Carlton Drive, and vacant land east of General Jim Moore Boulevard. Adjacent businesses/properties include grocery and convenience stores, two churches, a DMV office, hotels, community parks, residences, Seaside City Hall, Del Rey Oaks City Hall, **a gasoline station**, and a car wash. No hazardous materials pipelines were observed onsite.

Ryan Ranch Segment

The Ryan Ranch Segment (north of South Boundary Road) comprises vacant land east of General Jim Moore Boulevard and north of South Boundary Road. Adjacent businesses/properties include vacant land and **Fort Ord National Monument land**. No hazardous materials pipelines were observed onsite.

Past Use of the Property and Adjacent Properties

Based on our site reconnaissance, the National Monument Loop Segment, Ryan Ranch Segment, and the eastern portion of the Canyon Del Rey/SR 218 Segment were previously used as U.S. Army training grounds. Abandoned access roads, obstacle courses, and U.S. Army property signage were observed in these areas. Past uses of the Northern Marina Segment, CSUMB Loop North Segment, CSUMB Loop South Segment, and the central and western portions of the Canyon Del Rey/SR 218 Segment were not readily apparent based on observations made during the site reconnaissance.

Observations

Hazardous Substances and Petroleum Products in Connection with Identified Uses

With the exception of the aboveground storage tanks (ASTs) described below, no hazardous substances or petroleum products were observed during the site reconnaissance.

Storage Tanks

During the site reconnaissance, 10 ASTs were observed along the proposed alignment:

Northern Marina Segment:

- Three ASTs of unknown contents were observed. One was located in the northwestern-most portion of the Northern Marina segment near Del Monte Boulevard and two were located north of the Northern Marina segment on Monterey Regional Waste Management District property.
- Two ASTs containing propane were observed. One was located east of the Northern Marina Segment near its connection with the Northern Loop Segment and one was located east of the Marina segment on Monterey Regional Waste Management District property.
- One AST containing diesel fuel was observed in the southeastern portion of the Northern Marina Segment.

Northern Loop Segment:

- Two ASTs containing propane were observed among private residences along the portion of the Northern Loop Segment which runs between W. Blanco Road and Reservation Road.

CSUMB Loop South Segment:

- Two ASTs containing propane were observed: one on CSUMB property north of the intersection of Engineering Lane and Divarty Street and one southwest of the intersection of A Street and 8th Avenue.

Canyon Del Rey/SR 218 Segment:

- One AST containing propane was observed south of Plumas Avenue near its eastern terminus.

Odors

During the site reconnaissance, Rincon did not identify any strong, pungent, or noxious odors.

Drums

During the site reconnaissance, two drums were observed on the proposed alignment along the Northern Marina Segment; however, the drums were empty at the time of the site reconnaissance.

Unidentified Substance Containers

As discussed above, three ASTs of unknown contents were observed along the Northern Marina Segment. No other unidentified substance containers or unidentified containers that might contain hazardous substances were observed during the site reconnaissance.

Indications of Polychlorinated Biphenyls (PCBs)

PCBs may be encountered in fluorescent lighting ballasts, transformers, elevators, electrical substations, vehicle service lifts, and other areas where hydraulic equipment was historically used.

The types of equipment of concern in the project area are as follows:

- Several pole-mounted and pad-mounted transformers were observed; however, no leaks were observed on or beneath the transformers.

- One trash compactor was observed along the Canyon Del Rey/SR 218 Segment behind Safeway, located at 815 Canyon Del Rey Boulevard. Stained pavement was observed beneath the trash compactor.

Lead-Based Paint/Roadway Paint Striping

LBP was banned for residential and consumer use in 1978, and lead solder used in plumbing was banned in 1988. The use of LBP is still allowed for industrial purposes. Therefore, LBP may be present on or in buildings, bridges, and structures in the project area. Additionally, residue from yellow thermoplastic or yellow painted traffic stripes and pavement markings, which can contain elevated concentrations of some metals, may also be present.

Structures built before 1978 are likely to contain elevated concentrations of LBP. The types of structures of concern in the vicinity of the proposed alignment include residences painted prior to 1977, bridges, barns, sheds, commercial buildings, warehouses, industrial structures, equipment utility sheds, and painted bridge surfaces, other painted surfaces, yellow thermoplastic or yellow painted traffic stripes, and pavement markings.

Possible LBP-containing features were observed, including:

Northern Marina Segment

- Restrooms and playground
- Residences
- Lone Olson Elementary School
- Canaan Korean United Methodist Church
- Airport communications structure

Northern Loop Segment

- Residences

CSUMB Loop North Segment

- CSUMB campus buildings
- Abandoned army structures
- Abandoned army barracks
- Monterey Institute for Research in Astronomy
- Abandoned trucking dock structure
- Residences
- Horse boarding structures
- Bridge over Cabrillo Highway on westernmost portion

CSUMB Loop South Segment

- CSUMB campus buildings
- Abandoned army structures
- Abandoned army barracks

National Monument Loop Segment

- Monterey One Water piping and structures
- Army shooting range

Canyon Del Rey/SR 218 Segment

- Community Park structures
- Commercial businesses, including gasoline station, car wash and grocery stores
- Church of Oaks Congregational
- Residences

Ryan Ranch

- None

Various bridges along the alignment may also contain painted surfaces and/or LBP. Additionally, roadway paint striping may be encountered during demolition/construction at street crossings along the alignment. A list of major roadways is included below in the 'Highways – Aerially Deposited Lead' section of this report.

Asbestos-Containing Materials

In December 1977, the United States Consumer Product Safety Commission restricted the use of Asbestos Containing Materials (ACMs), including patching compounds and artificial fireplace ash products. It is likely that many structures in the vicinity of the proposed alignment were constructed prior to 1989. Therefore, ACMs may be present in the structures identified above.

Highways - Aerial Deposited Lead

Aerial-deposited lead (ADL) was historically deposited by cars burning leaded gasoline and is often found in the soil adjacent to highways and roads. Elevated concentrations of ADL may be present along existing roadways, including those throughout the project area. Considering the results of other unrelated projects assessed for lead in soil along highway corridors, soil in the project area may contain concentrations of lead exceeding state regulatory thresholds, and any waste generated from the disturbance of soil in these locations may be regulated as a hazardous waste.

Soil present within the project area is likely to be contaminated with ADL based on the proximity of several highways, as well as multiple county and city roads, including:

Northern Marina Segment

- Beach Road
- Del Monte Boulevard
- Charles Benson Road

Northern Loop Segment

- Reservation Road
- Inter-Garrison Road
- Blanco Road

CSUMB Loop North Segment

- 8th Street
- California Drive
- Imjin Parkway
- Imkin Road
- Engineering Equipment Road

CSUMB Loop South Segment

- Divarty Street

National Monument Loop Segment

- General Jim Moore Boulevard
- 8th Avenue
- Parker Flats Cut Off Road

Canyon Del Rey /SR 218 Segment

- Del Monte Avenue
- Highway 218
- General Jim Moore Boulevard

Ryan Ranch Segment

- South Boundary Road

Common Railroad Corridor Contaminants

Several railways and railroad spurs are located near and along the proposed alignment. The following former railroad is located in the vicinity of the proposed alignment:

- Former Southern Pacific Railroad – this railroad line runs in the north-south direction and is located to the west of Del Monte Boulevard and Highway 1 on the northern portion, then to the west of Del Monte Boulevard on the southern portion.

The railroad is present within the Northern Marina, Northern Loop, CSUMB Loop North and CSUMB Loop South Segments. Historically, the railroad was also present within the Canyon Del Rey/SR 218 Segment.

Agricultural Contaminants

Agricultural lands or landscapes adjacent to or within the proposed alignment may have been subject to regular applications of fertilizers, pesticides, or other chemicals for maintenance. Additionally, it is possible that agricultural chemicals were used, stored and/or mixed in or adjacent to the proposed alignment, and that chemical residues from such agricultural activities may be present in environmental media.

The specific areas of the project area that currently include agricultural uses include:

- Northern Marina Segment
- Northern Loop Segment

Hazardous Material Pipeline Utility Corridor Contaminants

Based on our review of the State of California Division of Oil, Gas, and Geothermal Resources (DOGGR) records, there are no refined liquid product (gasoline, jet fuel, liquid gas/oil, etc.) pipelines located within the project area. The closest refined liquid product hazardous material pipeline is located approximately 67 miles southeast of the proposed alignment.

Various natural gas pipelines are located within and around the project area and were not researched as part of this document.

Other Conditions of Concern

During the site reconnaissance Rincon did not note any of the following:

- Heating/cooling systems
- Corrosion
- Clarifiers and sumps
- Degreasers/parts washers
- Stressed vegetation
- Wells
- Septic systems/effluent disposal system

Pits, ponds, and lagoons – Two retention basins and one lagoon were observed adjacent to the proposed alignment. The two retention basins are located in the southern and eastern portions of the Marina Segment and the lagoon is located in the western portion of the Canyon Del Rey /SR 218 Segment. The two retention basins are interpreted to be used as reservoirs for nearby agricultural uses.

Solid waste/debris – Several piles of debris and miscellaneous trash were present along the southern portion of the National Monument Loop Segment, the eastern portion of the Canyon Del Rey/SR 218 Segment, and the southern portion of the Northern Marina Segment.

Stained soil or stained pavement – One area of stained asphalt approximately five by 21 feet in size was observed near 3rd Avenue. This stain is located approximately 70 feet from the proposed alignment, and is, therefore, not expected to impact the proposed alignment.

Waste water – No standing waste water was observed onsite; however, the Monterey One Water Treatment Plant is located adjacent to the Northern Marina Segment's eastern edge.

Unexploded Ordnance – The proposed alignment runs through portions of the Former Fort Ord Military Reservation, including former training areas. Therefore, there is a potential to encounter unexploded ordnance along the proposed alignment.

Findings and Opinions

Based on the research conducted as part of this assessment, 9 hazardous material findings have been identified. The locations of these hazards in relation to the proposed alignment presented are shown in Figures 2 through 7 and summarized below. If additional assessment is warranted, the necessary recommendations are identified below and described in the following section.

Table 2 Summary of Hazardous Material Findings and Opinions

Environmental Concern	Alignment Affected	Figure Reference	Opinion	Recommendations
1 - Onsite former Fort Ord Military Reservation/Training Areas	Northern Marina, Northern Loop, CSUMB Loop North, CSUMB Loop South, National Monument Loop, Canyon Del Rey/SR 218	Figures 2-7	The proposed alignment passes through the former Fort Ord Military Reservation and associated training areas. Elevated levels of contaminants, including a variety of VOCs, have been detected in soil and groundwater. Fort Ord is currently participating in a Department of Defense program to identify, investigate and clean up contamination from former onsite activities. The soil is reported to be contaminated with unexploded ordnance and munitions constituents, as well as the presence of these materials themselves. In addition, based on the former use of the property as a fire drill area (in the vicinity of the Northern Marina Segment), there is also a potential for per-and polyfluoroalkyl substances (PFAS) to be in the groundwater beneath the proposed alignment.	It is recommended that additional subsurface assessment is conducted for all areas in the vicinity of the firing ranges, including the Fort Ord OU1 (Off-Site Plume) area. Additionally, the Fort Ord Reuse Authority should be contacted to discuss the planned trail and determine if unexploded ordnance clearance should be provided prior to soil disturbance and/or public use of the trail.
2 - Known adjacent release site with residual soil and groundwater contamination – Del Rey Car Wash, Inc. at 810 Canyon Del Rey Road	Canyon Del Rey/SR 218	Figure 7	According to the regulatory records reviewed, the Canyon Del Rey/SR 218 Segment is located adjacent to a property with known residual soil and groundwater contamination from a former release. Based on the records available, it appears that offsite contamination of hydrocarbons in soil and groundwater is limited. The monitoring wells closes to the proposed alignment indicate that none of the contaminants of concern are present; therefore, this property is not expected to impact the proposed alignment.	n/a
3 - Known upgradient release site with no closure documentation – 1083 Fremont Boulevard	Canyon Del Rey/SR 218	Figure 7	According to the regulatory records reviewed, the Canyon Del Rey/SR 218 Segment is located in the vicinity of a release site with groundwater contamination. Based on the distance from the subject property and the depth to groundwater in the vicinity of this property, the release from this property is not expected to impact the proposed alignment.	
4 - Onsite structures built prior to 1978 that may contain lead-based paint (LBP) and Roadway Paint Striping	CSUMB Loop North, CSUMB Loop South, Canyon Del Rey/SR 218	Figures 4, 5 and 7	LBP was banned in 1988, however, the use of LBP is still allowed for industrial purposes. Therefore, LBP may be present on or in buildings, bridges, and structures in the vicinity of the proposed alignment (discussed in Site Reconnaissance section above). Additionally, residue from yellow thermoplastic or yellow painted traffic stripes and pavement markings, which can contain elevated concentrations of some metals, may also be present. The types of structures of concern in the alignment include residences painted	We understand that no structures will be renovated or demolished as part of this project. However, if structures built prior to 1978 are planned for demolition or repair, an LBP survey should be conducted to determine if LBP is present and will require special handling/disposal. Additionally, if roadway stripe paint will be disturbed, the paint should be tested for metals prior to demolition or construction of the trail.

			prior to 1977, bridges, barns, sheds, commercial buildings, warehouses, industrial structures, equipment utility sheds, and painted bridge surfaces, other painted surfaces, yellow thermoplastic or yellow painted traffic stripes, and pavement markings.	
5 - Onsite structures built prior to 1989 that may contain asbestos-containing materials (ACM)	CSUMB Loop North, CSUMB Loop South, Canyon Del Rey/SR 218	Figures 4,5 and 7	In December 1977, the United States Consumer Product Safety Commission restricted the use of Asbestos Containing Materials (ACMs). It is likely that many structures in the vicinity of the proposed alignment, as identified in the Site Reconnaissance section above, were constructed prior to 1989. Therefore, ACMs may be present in the structures identified above.	We understand that no structures will be renovated or demolished as part of this project. However, if structures built prior to 1989 are planned for demolition or repair, an ACM survey should be conducted to determine if ACM is present and will require special handling/disposal.
6 - Potential for aerially-deposited lead on properties directly adjacent to major streets and roads	All	Figures 2-8	Aerially-deposited lead (ADL) was historically deposited by cars burning leaded gasoline and is often found in the soil adjacent to highways and roads. Elevated concentrations of ADL may be present along existing roadways, including those throughout the project area. Considering the results of other unrelated projects assessed for lead in soil along highway corridors, soil in the project area may contain concentrations of lead exceeding state regulatory thresholds, and any waste generated from the disturbance of soil in these locations may be regulated as a hazardous waste. The proposed alignment passes through or is located in the vicinity of several major roads and highways. In these areas, there is the potential for ADL to be located in onsite soils.	The proposed alignment passes through or is located in the vicinity of several major roads and highways. In these areas, it is recommended that the soil in the vicinity of the highways be assessed for the presence of lead. If impacted soil is identified, a soil management plan should be prepared.
7 - ASTs - Fuel	Northern Marina	Figure 2	One diesel AST was observed adjacent to the Northern Marina Segment. No unauthorized releases have been reported; therefore, the diesel AST is not expected to impact the proposed alignment, and no further assessment is recommended.	n/a
8 - PCBs	Northern Marina, Northern Loop, CSUMB Loop North, CSUMB Loop South, National Monument Loop, Canyon Del Rey/SR 218	Figures 2-7	Several pole- and pad-mounted transformers were observed in the vicinity of the proposed alignment. No indications of releases were observed in the vicinity of the transformers. One trash compactor was observed in the vicinity of the proposed alignment; the trash compactor was observed to have staining on the pavement beneath it. However, based on the limited extent of the staining and the fact that it was on pavement, the release from the trash compactor is not expected to impact the proposed alignment.	n/a

9 - Common Railroad Corridor Contaminants	Northern Marina, Northern Loop, CSUMB Loop North, CSUMB Loop South, Canyon Del Rey/SR 218	Figures 2-5 and 7	Railroad lines were observed in the vicinity of the Northern Marina, CSUMB Loop North and CSUMB Loop South Segments. In addition, historical sources indicate that railroad tracks were formerly located in the vicinity of the Canyon Del Rey/SR 218 Segment, on the western portion. Contaminants common in railway corridors include petroleum hydrocarbons, pesticides/herbicides, polycyclic aromatic hydrocarbons, and heavy metals, including arsenic and lead. Unused/abandoned railroad ties/timbers may also remain onsite and would require special handling and disposal.	Railroad lines were observed in the vicinity of the Northern Marina, Northern Loop, CSUMB Loop North and CSUMB Loop South Segments. In addition, railroad lines were historically located along the western portion of the Canyon Del Rey/SR 218 Segment. Prior to construction activities in these areas, it is recommended that the soil in the vicinity of the railroad be assessed for the presence of typical railroad contaminants, such as organochlorine pesticides, polycyclic aromatic hydrocarbons, total petroleum hydrocarbons, volatile organic compounds, semi-volatile organic compounds and arsenic. If impacted soil is identified, a soil management plan should be prepared.
10 - Agricultural Contaminants	Northern Marina, Northern Loop	Figures 2, 3	Agricultural land is located in the vicinity of the Northern Marina and Northern Loop Segments. Former agricultural lands or landscapes adjacent to or in the project area may have been subject to regular applications of fertilizers, pesticides, or other chemicals for maintenance. Additionally, it is possible that agricultural chemicals were formerly used, stored and/or mixed in or adjacent to the project area, and that chemical residues from such historical agricultural activities may be present in environmental media.	Agricultural land is located in the vicinity of the Northern Marina and Northern Loop Segments. Prior to construction activities in these areas, it is recommended that the soil in the vicinity of the agricultural areas be assessed for the presence of contaminants commonly associated with agricultural production. These contaminants include organochlorine pesticides and arsenic. If impacted soil is identified, a soil management plan should be prepared.
11 - Adjacent Landfill	Northern Marina	Figure 2	A municipal solid waste landfill is located directly adjacent to the Northern Marina Segment. The closest monitoring well with detected concentrations of VOCs is located approximately 800 feet to northeast of the proposed alignment. Based on the reported direction of groundwater flow to the northeast, away from the proposed alignment, the groundwater plume at this property is not expected to impact the proposed alignment.	n/a

Conclusions

This assessment has revealed evidence of 4 environmental conditions that require additional assessment:

- Onsite former Fort Ord Military Reservation/Training Areas
- Potential for ADL on properties directly adjacent to major streets and roads
- Common railroad corridor contaminants
- Agricultural contaminants

In addition, the following 2 environmental conditions would require additional assessment, if nearby structures were to be demolished:

- Onsite structures built prior to 1978 that may contain LBP and roadway paint striping
- Onsite structures built prior to 1989 that may contain ACM

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

Summary Details:

Conditions at proposal July 14, 1989): Fort Ord covers 46 square miles on Monterey Bay approximately 5.6 miles north of Monterey, Monterey County, California. The installation is bordered by the City of Marina and the Salinas River to the north, El Toro Creek to the east, Seaside and Del Rey Oaks to the south, and Monterey Bay to the west. Fort Ord was established in 1917 as a maneuver area and field artillery target range for units then stationed at the Presidio of Monterey. Its primary mission now is training. Industrial operations at Fort Ord include vehicle maintenance areas, a battery charging/repair facility, photographic processing laboratories, spray painting operations, a plastics shop, laundry/dry cleaning facilities, vehicle wash racks, and a small arms repair shop. Chemicals and hazardous wastes were managed and disposed of at Fort Ord. According to tests conducted by the Army in 1986, elevated levels of contaminants were detected in off-base ground water. The contamination is emanating from the base and may be contaminating the drinking water supplies of the City of Marina; however, the exact location of the source has not yet been identified. The contaminants include carbon tetrachloride, tetrachloroethylene, trichloroethylene, 1,1,1-trichloroethane, and trans-1,2-dichloroethylene. An estimated 38,600 people obtain drinking water

from wells within 3 miles of hazardous substances on the fort. Ground water is also used for irrigation. In addition, soil and ground water are contaminated at the Fire Drill Area, where approximately 600 gallons of petroleum products have been spilled. Fort Ord has identified at least 18 other contamination problems. Fort Ord is participating in the Installation Restoration Program (IRP), established in 1978. Under this program, the Department of Defense seeks to identify, investigate, and clean up contamination from hazardous materials. As part of IRP, the Army is implementing a sampling plan to investigate ground water contamination. The Army is treating contaminated soil and ground water at nearby Fritzsche Army Airfield Fire Drill Area. Status February 21, 1990): IRP activities continue.
